

New 2V0-16.25 Exam Topics & 2V0-16.25 Exam Simulator

BONUS!!! Download part of ExamTorrent 2V0-16.25 dumps for free: https://drive.google.com/open?id=13_l6ye9MatUMBhKLLafVR0GEHDoY4Rgd

One year free update for VMware 2V0-16.25 is available for all of you after your purchase. ExamTorrent 2V0-16.25 pdf download dumps have helped most IT candidates get their 2V0-16.25 certification. The high quality and best valid 2V0-16.25 dumps we have been the best choice for your preparation. You just need to take 20-30 hours to study and prepare, then you can attend your 2V0-16.25 Actual Test with ease. 100% success is the guarantee of 2V0-16.25 pdf study material.

By keeping customer satisfaction in mind, ExamTorrent offers you a free demo of the VMware vSphere Foundation 9.0 Administrator (2V0-16.25) exam questions. As a result, it helps you to evaluate the VMware vSphere Foundation 9.0 Administrator (2V0-16.25) exam dumps before making a purchase. ExamTorrent is steadfast in its commitment to helping you pass the VMware vSphere Foundation 9.0 Administrator (2V0-16.25) exam. A full refund guarantee (terms and conditions apply) offered by ExamTorrent will save you from fear of money loss.

2V0-16.25 Exam Simulator | Testking 2V0-16.25 Learning Materials

We also provide timely and free update for you to get more 2V0-16.25 questions torrent and follow the latest trend. The 2V0-16.25 exam torrent is compiled by the experienced professionals and of great value. You can master them fast and easily. We provide varied versions for you to choose and you can find the most suitable version of 2V0-16.25 Exam Materials. So it is convenient for the learners to master the 2V0-16.25 questions torrent and pass the 2V0-16.25 exam in a short time.

VMware 2V0-16.25 Exam Syllabus Topics:

Topic	Details

Topic 1	<ul style="list-style-type: none"> IT Architectures, Technologies, Standards: This section of the exam measures the understanding of IT Infrastructure Architects and covers foundational concepts of architectures, emerging technologies, and industry standards. Although no testable objectives are listed here, it establishes the baseline knowledge needed to interpret and design VMware-related environments effectively.
Topic 2	<ul style="list-style-type: none"> Troubleshoot and Optimize the VMware Solution: This section of the exam measures the ability of Systems Engineers to troubleshoot and optimize VMware-based environments. While no explicit testable objectives are listed, candidates are expected to apply their problem-solving skills to diagnose, resolve, and enhance VMware solutions for improved reliability and performance.
Topic 3	<ul style="list-style-type: none"> Deploy, Configure, and Operate VMware vSphere Foundation (VVF): This section of the exam measures the expertise of Data Center Administrators and emphasizes hands-on skills in deploying and configuring VMware vSphere Foundation environments. Candidates must understand the components of a VVF deployment, configure Supervisors within clusters, and manage identity, access control, licensing, and certificate management. The objectives also extend to lifecycle management within the vSphere Foundation. Furthermore, it explores operational tasks including monitoring and analyzing logs, configuring alerting, managing dashboards, and integrating with VMware Cloud Foundation (VCF) Operations. Candidates will also be tested on cost and pricing configuration, compliance monitoring, and security hardening practices. Finally, automation skills are validated through deploying services with Supervisors, running Kubernetes workloads, using VM services, and integrating VCF Operations Orchestrator to support enterprise automation.
Topic 4	<ul style="list-style-type: none"> VMware vSphere Foundation Fundamentals: This section of the exam measures the skills of Virtualization Engineers and focuses on the essentials of virtualization technology. It introduces the principles of virtualization, explores use cases, and highlights the value it brings to businesses. Candidates are expected to demonstrate knowledge of VMware compute components such as vCenter and ESX, cluster configuration, and lifecycle management of virtual machines. It also covers secure workload operations, encryption, and managing resources with content libraries. In addition, storage fundamentals are examined through configuring vSphere storage, deploying VMware vSAN clusters, defining storage policies, and ensuring data availability. Networking fundamentals are also introduced, requiring the ability to differentiate between VMware vSphere networking components.
Topic 5	<ul style="list-style-type: none"> Plan and Design the VMware by Broadcom Solution: This section of the exam measures the ability of VMware Solution Architects to plan and design solutions. While there are no specific testable objectives included, the focus is on preparing professionals to design VMware-based solutions that align with organizational goals and best practices.

VMware vSphere Foundation 9.0 Administrator Sample Questions (Q10-Q15):

NEW QUESTION # 10

An administrator is tasked to configure VMware Cloud Foundation (VCF) Operations alerts to notify only relevant stakeholders when alerts trigger.

Which configuration step will satisfy the requirement?

- A. Configure notification to write a file to an output folder.
- B. Configure notification for only critical alerts.
- C. Configure notification to specific alert recipients.
- D. Configure notification to use generic contact information.

Answer: C

Explanation:

In VCF Operations, alerts can be configured with notification settings. To ensure only relevant stakeholders receive alerts:

* You assign specific recipients to notifications.

* This avoids alert fatigue and ensures teams only see alerts they are responsible for.

Other options:

* A. Write to file# Not for stakeholder notifications.

- * B. Only critical alerts# Reduces volume, but still not targeted to relevant recipients.
- * D. Generic contact info# Sends to broad groups, not selective.

VMware Docs: Configuring Notifications in vRealize Operations

NEW QUESTION # 11

An administrator is informed that a digital certificate used by vSphere has been revoked by the issuing Certificate Authority (CA) before the scheduled expiration date. The administrator checks the Certificate Revocation List (CRL) in VMware Cloud Foundation (VCF) Operations but the CRL tab is not activated.

What must the administrator do to view the CRL?

- A. Set the Threshold For Adapters Certificate Expiration Alert to 6 under Global Settings.
- B. The CRL tab is not available when VCF Operations is licensed under vSphere Foundation.
- C. Select the External Event Based Active Symptoms under Global Settings.
- **D. Select the Activate Standard Certificate Validation under Global Settings.**

Answer: D

Explanation:

In VCF Operations, the Certificate Revocation List (CRL) tab is visible only when Standard Certificate Validation is activated in Global Settings.

* Once enabled, administrators can view the CRL tab and monitor revoked certificates.

Other options:

- * A. External Event Based Active Symptoms# Related to alerting, not CRL.
- * C. Threshold for Expiration Alert# Configures warnings, not CRL visibility.
- * D. Not available under vSphere Foundation license# Incorrect; CRL is available if validation is enabled.

NEW QUESTION # 12

An organization uses VMware Cloud Foundation (VCF) Operations to monitor and troubleshoot issues within a VMware vSphere Foundation (VVF) environment.

As part of the root cause analysis following a recent critical event, the administrator determined that specific log messages on a host clearly identified the problem.

What should the administrator implement to provide additional data to help troubleshoot in the future?

- **A. VCF Operations for logs**
- B. VCF Operations Management Pack for VCF
- C. VCF Automation
- D. VCF Operations Diagnostics

Answer: A

Explanation:

When troubleshooting critical events in a VMware vSphere Foundation (VVF) environment, logs are essential for root cause analysis.

* In the given scenario, the administrator identified that specific log messages on a host clearly pinpointed the issue.

* To enhance future troubleshooting, the best approach is to implement VCF Operations for Logs.

* This enables centralized log collection, log-based alerts, and advanced queries, making it easier to correlate issues across infrastructure.

Other options like VCF Operations Diagnostics focus on proactive health checks and findings, while Management Pack for VCF extends observability but does not provide raw log insights. VCF Automation is unrelated to troubleshooting logs.

NEW QUESTION # 13

An administrator is tasked to create a new VMware vSAN cluster. The following information was provided to the administrator:

- * Should host high performance application.
- * Workload is latency dependent.
- * Workload, compute and storage must be in the vSAN cluster.

Which configuration should the administrator choose for this vSAN cluster?

- **A. vSAN Express Storage Architecture (ESA)**
- B. vSAN Storage Cluster
- C. vSAN Original Storage Architecture (OSA) Stretched Cluster
- D. vSAN Original Storage Architecture (OSA)

Answer: A

Explanation:

The workload requirements specify:

- * High-performance application
- * Latency-dependent workloads
- * Compute and storage must reside in the vSAN cluster

The correct option is vSAN Express Storage Architecture (ESA) because:

- * ESA is designed for high-performance, low-latency applications.
- * It leverages NVMe-based storage devices and 25GbE networking, delivering better IOPS and reduced latency compared to OSA.
- * OSA (Original Storage Architecture) is older and less efficient.
- * OSA Stretched Cluster (A) is for resilience across sites, not specifically performance.
- * vSAN Storage Cluster (B) is a generic term and not specific.

NEW QUESTION # 14

An administrator is tasked to create a new view in VMware Cloud Foundation (VCF) Operations to monitor CPU demand on ESX hosts, including the historical and forecast data.

Which view type is appropriate to display such information?

- A. Distribution
- B. Table
- C. Text
- **D. Trend**

Answer: D

Explanation:

In VCF Operations, when monitoring metrics like CPU demand across ESX hosts, including historical usage and forecast data, the best visualization is a Trend view.

- * Trend view displays data over time, showing both past and predicted future behavior.
- * This makes them ideal for capacity planning, performance forecasting, and demand analysis.
- * Table (A) # Shows raw values but lacks predictive visualization.
- * Distribution (B) # Useful for comparing values across objects but not for time-based or forecasted trends.
- * Text (C) # Displays static values or metrics, not historical/forecasting data.
