100% Pass Quiz Zscaler - Useful ZDTE Valid Dumps Free

If you prefer to Practice ZDTE Exam dumps on paper, you can try the exam dumps of us. ZDTE PDF version is printable, and you can take some notes on it and can practice them anytime. Besides through using ZDTE e questions and answers of us, you can pass the exam and get a certificate successfully. We offer you pass guarantee and money back guarantee if you fail to pass the exam. Once you have made your decision, just add them into your cart and pay for it, we will send the downloading link in ten minutes.

Our Zscaler Digital Transformation Engineer study questions have a high quality, that mainly reflected in the passing rate. More than 99% students who use our ZDTE exam material passed the exam and successfully obtained the relating certificate. This undoubtedly means that if you purchased ZDTE exam guide and followed the information we provided you, you will have a 99% chance of successfully passing the exam. With ZDTE Exam Guide, there will not be a situation like other students that you need to re-purchase guidance materials once the syllabus has changed. ZDTE exam material not only helps you to save a lot of money, but also let you know the new exam trends earlier than others.

Valid ZDTE Test Pattern, Exam ZDTE Outline

Our system is high effective and competent. After the clients pay successfully for the ZDTE study materials the system will send the products to the clients by the mails. The clients click on the links in the mails and then they can use the ZDTE study materials immediately. Our system provides safe purchase procedures to the clients and we guarantee the system won't bring the virus to the

clients' computers and the successful payment for our ZDTE Study Materials. Our system is strictly protect the clients' privacy and sets strict interception procedures to forestall the disclosure of the clients' private important information. Our system will automatically send the updates of the ZDTE study materials to the clients as soon as the updates are available. So our system is wonderful.

Zscaler Digital Transformation Engineer Sample Questions (Q37-Q42):

NEW QUESTION # 37
What are the valid options as criteria to create an alert rule in ZDX?

- A. DNS Time and Network Response Time
- B. Page Fetch Time and Packet Loss Rate
- C. Server Response Time and Packet Loss Rate
- D. DNS Time and Server Response Time

Answer: D

Explanation:
Zscaler Digital Experience (ZDX) uses web probes to measure application performance from the user's perspective. Official ZDX reference material and EDU/ZDTE study guides describe the four key web-probe metrics as Page Fetch Time (PFT), DNS Time, Server Response Time (Time to First Byte), and Availability. These same metrics are explicitly called out in training and exam prep as the values that can be used when defining application-level alert rules (for example, "DNS Time > X ms" or "Server Response Time
> Y ms").
ZDX documentation also explains that each alert rule type (Application, Device, Network, or Call Quality) has its own metrics and criteria, and that application alerts are driven by web-probe metrics like DNS Time and Server Response Time, while network alerts use CloudPath metrics such as latency and packet loss. Because both DNS Time and Server Response Time are application-probe metrics, they can legitimately be used together as criteria in an application-type alert rule.
By contrast, combinations that mix web-probe metrics with network-only metrics (like Packet Loss Rate) or vaguely defined "Network Response Time" do not reflect how ZDX structures its alert criteria per type.
Therefore, among the listed options, the pair that correctly represents valid ZDX alert criteria for application monitoring is DNS Time and Server Response Time.

NEW QUESTION # 38
What is Zscaler Deception?

- A. A set of decoys representing users and server elements used to identify an attacker accessing our infrastructure.
- B. An early detection system supported via servers located inside our corporate infrastructure.
- C. A set of decoys representing network elements used to identify an attacker accessing our infrastructure.
- D. A simple and more effective targeted threat detection solution built on the Zscaler Zero Trust architecture.

Answer: D

Explanation:
In the Zscaler Digital Transformation Engineer material, Zscaler Deception is introduced as an advanced threat-detection capability that is tightly integrated with the Zero Trust Exchange. The official description emphasizes that it is a simple, cloud-delivered, and highly effective targeted threat detection solution built on Zscaler's Zero Trust architecture, which is almost word-for-word reflected in option C.
Deception works by deploying high-fidelity decoys, lures, and credentials-designed to be indistinguishable from real assets-from the attacker's point of view. Any interaction with these decoys is inherently suspicious, yielding high-confidence, low-noise alerts that help security teams quickly identify lateral movement, credential theft, and post-compromise activity. The key point in the training is that this capability is delivered from the Zscaler cloud, leveraging the existing Zero Trust platform; it does not require additional on-premise detection servers or traditional network-centric sensors.
Options A and B reduce the concept to "sets of decoys" and ignore the integrated Zero Trust detection value and cloud-native delivery model. Option D incorrectly suggests on-prem server infrastructure as the foundation. The exam materials clearly frame Zscaler Deception as a Zero Trust-based targeted threat detection solution, making option C the correct choice.

NEW QUESTION # 39

What capabilities within Zscaler External Attack Surface Management (EASM) are specifically designed to uncover and assess domains that are intentionally created to resemble your legitimate brand or websites?

- A. Mimic Domains
- B. Fake Domains
- C. Spoofing Domains
- D. Lookalike Domains

Answer: D

Explanation:

Zscaler External Attack Surface Management (EASM) includes a dedicated capability called Lookalike Domains. Zscaler defines lookalike domains as fraudulent or fake domains intentionally created by threat actors to mimic your legitimate domains and brand presence, often for phishing, credential theft, or brand abuse.

Within the EASM portal, the Lookalike Domains pages and widgets present a curated list of suspicious domains that closely resemble your seed or official domains. Analysts can review exposure scores, registrar details, hosting information, and other attributes to determine which of these domains pose the highest risk and warrant takedown or additional monitoring.

This feature is specifically designed for external risk and brand-protection use cases: it highlights where attackers are impersonating your organization on the public internet, which is a core component of digital-risk and external-attack-surface management. While words such as "fake," "mimic," or "spoofing" may be used generically in security discussions, "Lookalike Domains" is the exact term and feature name Zscaler uses in the EASM product and documentation. Options A, B, and C do not correspond to a named EASM capability and therefore are not correct in the ZDTE context.

NEW QUESTION # 40

Which connectivity service provides branches, on-premises data centers, and public clouds with fast and reliable internet access while enabling private applications with a direct-to-cloud architecture?

- A. Zscaler Zero Trust SD-WAN
- B. Zscaler App Connector
- C. Zscaler Browser Access
- D. Zscaler Privileged Remote Access

Answer: A

Explanation:

Zscaler Zero Trust SD-WAN is specifically designed to give branches, on-premises data centers, and workloads running in public clouds fast, reliable, and secure access to the internet and private applications using a direct-to-cloud architecture. In the Zscaler Digital Transformation Engineer curriculum, this service is positioned as the connectivity foundation that replaces legacy hub-and-spoke MPLS and VPN designs with cloud-delivered Zero Trust connectivity.

Instead of backhauling traffic to central data centers, branches and sites establish lightweight, policy-driven tunnels directly to the Zscaler cloud, where security inspection and Zero Trust access decisions are applied.

This architecture reduces latency, simplifies routing, and optimizes SaaS and internet performance while simultaneously enabling secure access to private applications without exposing them to the public internet.

App Connectors (option C) are used for application-side connectivity in ZPA, not for full branch or data center connectivity. Browser Access (option B) provides clientless application access for users, not network- level site connectivity. "Zscaler Privileged Remote Access" (option A) is not the term used for this broad connectivity service. Therefore, the only option that matches the described direct-to-cloud, multi-site connectivity role is Zscaler Zero Trust SD-WAN.

NEW QUESTION # 41

Which Zscaler technology can be used to enhance your cloud data security by providing comprehensive visibility and management of data at rest within public clouds?

- A. SaaS Security Posture Management (SSPM)
- B. Cloud Sandbox
- C. Cloud Access Security Broker (CASB)
- D. Data Security Posture Management (DSPM)

Answer: D

Explanation:

Zscaler Data Security Posture Management (DSPM) is specifically designed to discover, classify, and protect data at rest across public cloud environments such as object stores, databases, and other cloud-native services. Zscaler's DSPM solution continuously scans cloud data stores to identify where sensitive data resides, who can access it, how it is shared, and whether it violates corporate or regulatory policies, so security teams gain full visibility into their cloud data landscape and can remediate risks at scale.

In the broader Zscaler Data Protection portfolio, DSPM is highlighted as the capability that extends protection beyond inline traffic to data at rest in SaaS and public clouds, complementing DLP and malware controls that secure data in motion. Cloud Sandbox (option B) focuses on detonating suspicious files to detect zero-day malware; CASB (option C) secures SaaS usage and API-based access; and SSPM (option D) concentrates on assessing and fixing misconfigurations in SaaS applications. None of these options are as tightly aligned to continuous discovery and posture management of public-cloud data at rest as DSPM.

Therefore, the Zscaler technology that enhances cloud data security by providing comprehensive visibility and management of data at rest in public clouds is Data Security Posture Management (DSPM).

NEW QUESTION # 42

......

It can almost be said that you can pass the ZDTE exam only if you choose our ZDTE exam braindumps. Our ZDTE study materials will provide everything we can do to you. Only should you move the mouse to buy it can you enjoy our full range of thoughtful services. Having said that, why not give our ZDTE Preparation materials a try instead of spending a lot of time and effort doing something that you may be not good at? Just give it to us and you will succeed easily.
