AZ-700 exam dumps, Microsoft AZ-700 network simulator review

If you are preparing for the exam in order to get the related AZ-700 certification, here comes a piece of good news for you. The AZ-700 guide torrent is compiled by our company now has been praised as the secret weapon for candidates who want to pass the AZ-700 Exam as well as getting the related certification, so you are so lucky to click into this website where you can get your secret weapon. Our reputation for compiling the best AZ-700 training materials has created a sound base for our future business.

Microsoft AZ-700 Exam is designed for individuals who want to validate their skills in designing and implementing Azure networking solutions. Designing and Implementing Microsoft Azure Networking Solutions certification exam is ideal for IT professionals who are responsible for designing and implementing Azure networking solutions for their organizations. Candidates must have a strong understanding of networking concepts and experience with Azure networking services to pass the exam.

Microsoft Designing and Implementing Microsoft Azure Networking Solutions Sample Questions (Q68-Q73):

NEW QUESTION # 68

Your company has offices in Montreal, Seattle, and Paris. The outbound traffic from each office originates from a specific public IP address.

You create an Azure Front Door instance named FD1 that has Azure Web Application Firewall (WAF) enabled. You configure a WAF policy named Policy1 that has a rule named Rule1. Rule1 applies a rate limit of 100 requests for traffic that originates from the office in Montreal.

You need to apply a rate limit of 100 requests for traffic that originates from each office.

What should you do?

- A. Create two additional associations.
- B. Modify the rule type of Rule1.
- C. Modify the rate limit threshold of Rule1.
- D. Modify the conditions of Rule1.

Answer: D

Explanation:

Rate limits are applied for each client IP address. If you have multiple clients accessing your Front Door from different IP addresses, they will have their own rate limits applied.

<https://azure.microsoft.com/en-us/resources/templates/front-door-rate-limiting/>

NEW QUESTION # 69

You have an Azure subscription that contains an Azure key vault named Vault1 and an app registration for an Azure AD app named App1.

You have a DNS domain named contoso.com that is hosted by a third-party DNS provider.

You plan to deploy App1 by using Azure App Service. App1 will have the following configurations:

- * App1 will be hosted across five App Service apps.
- * Users will access App1 by using a URL of <https://app1.contoso.com>.
- * The user traffic of App1 will be managed by using Azure Front Door.
- * The traffic between Front Door and the App Service apps will be sent by using HTTP.
- * App1 will be secured by using an SSL certificate from a third-party certificate authority (CA).

You need to support the Front Door deployment.

Which two DNS records should you create, and to where should you import the SSL certificate for App1? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

☐

Answer:

Explanation:

☐

Explanation:

☐

NEW QUESTION # 70

You have an Azure subscription that contains the resources shown in the following table.

☐ The IP Addresses settings for Vnet1 are configured as shown in the exhibit.

☐ You need to ensure that you can integrate WebApp1 and Vnet1.

Which three actions should you perform in sequence before you can integrate WebApp1 and Vnet1? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

☐

Answer:

NEW QUESTION # 71

You have two Azure virtual networks named Vnet1 and Vnet2 in an Azure region that has three availability zones.

You deploy 12 virtual machines to each virtual network, deploying four virtual machines per zone. The virtual machines in Vnet1 host an app named App1. The virtual machines in Vnet2 host an app named App2.

You plan to use Azure Virtual Network NAT to implement outbound connectivity for App1 and App2.

You need to identify the minimum number of subnets and Virtual Network NAT instances required to meet the following requirements:

* A failure of two zones must NOT affect the availability of either App1 or App2.

* A failure of two zones must NOT affect the outbound connectivity of either App1 or App2.

What should you identify? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.
