Our MS 210 study materials are recognized as the standard and authorized study materials and are widely commended at home and abroad. Our MS 210 study materials benefit superior advantages and the service of our products is perfect. We choose the most useful and typical questions and answers which contain the key points of the test and we try our best to use the least amount of questions and answers to illustrate the most significant information.

**Schedule exam**  
Language: English, Japanese  
Reference date: none

This exam measures your ability to accomplish the following technical tasks: Perform configuration, Manage core sales tables, Configure additional tools and services.

**Microsoft MB-210 Exam Syllabus Topics:**

Topic	Weight
Perform configuration	25-30%

Non-Certified (for 2023) Microsoft MB-210 Microsoft Dynamics 365 Sales Functional Consultant - Marvelous Reliable Test Price

With AI-300 practice test questions you can not only streamline your exam Microsoft AI-300 exam preparation process but also feel confident to pass the challenging AI-300 Exam easily. One of the top features of Microsoft AI-300 valid dumps is their availability in different formats.

Many people now want to obtain the AI-300 certificate. Because getting a certification can really help you prove your strength, especially in today's competitive pressure. The science and technology are very developed now. If you don't improve your soft power, you are really likely to be replaced. Our AI-300 Exam Preparation can help you improve your uniqueness. And our AI-300 study materials contain the most latest information not only on the content but also on the displays.

## Test AI-300 Prep & AI-300 Examcollection Vce

We provide a guarantee on all of our AI-300 test products, and you will be able to get your money back if we fail to deliver the results as advertised. We provide 100% money back guarantee for all of us AI-300 test questions products, and we are always available to provide you top notch support and new AI-300 Questions. If you are facing issues in downloading the AI-300 study guides, then all you have to do is to contact our support professional, and they will be able to help you out with AI-300 answers.

## Microsoft Operationalizing Machine Learning and Generative AI Solutions Sample Questions (Q72-Q77):

### NEW QUESTION # 72

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear on the review screen.

You manage an Azure Machine Learning workspace. The Python script named `script.py` reads an argument named `training_data`.

The `training_data` argument specifies the path to the training data in a file named `dataset1.csv`.

You plan to run the `script.py` Python script as a command job that trains a machine learning model.

You need to provide the command to pass the path for the dataset as a parameter value when you submit the script as a training job.

Solution: `python train.py --training_data training_data`

Does the solution meet the goal?

- A. No
- B. Yes

**Answer: A**

Explanation:

Correct:

```
* python script.py --training_data ${inputs.training_data}
```

The script is named `script.py`.

For the parameter use `${inputs.training_data}`

Incorrect:

```
* python script.py --training_data dataset1.csv
```

```
* python script.py dataset1.csv
```

```
* python train.py --training_data training_data
```

Note: Read a `TabularDataset`, Example

In the `Input` object, specify the type as `AssetTypes.MLTABLE`, and mode as `InputOutputModes.DIRECT`:

\* Details omitted\*

```
job = command(  
code="/.src", # Local path where the code is stored  
*-> command="python train.py --inputs ${inputs.input_data}",  
inputs=my_job_inputs,  
environment="<environment_name><version>",  
compute="cpu-cluster",  
)
```

### NEW QUESTION # 73

Hotspot Question

A team is building a generative AI agent by using Retrieval-Augmented Generation (RAG) in Microsoft Foundry.

The team frequently updates prompt content. The team must be able to track changes across contributors while avoiding full application redeployments.

You need to enable rapid prompt iteration with traceability. Applications consuming the agent must be able to use updated prompts without requiring redeployment.

What should you configure for each requirement? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

**Answer:**

Explanation:

#### NEW QUESTION # 74

A data science team trains a classification model that predicts loan approval outcomes.

Before registering the model, the team must ensure the following:

- Predictions must not disproportionately impact protected groups.
- Prediction errors can be evaluated across different data segments.

You need to assess whether the model meets Responsible AI expectations.

Which two approaches should you use? Each correct answer presents part of the solution.

Choose two.

NOTE: Each correct selection is worth one point.

- A. Validate inference schema compatibility.
- **B. Analyze error rates across defined demographic cohorts.**
- C. Measure endpoint latency under load.
- **D. Evaluate feature importance for prediction transparency.**
- E. Analyze error rates across the global cohort.

**Answer: B,D**

Explanation:

[D]

To evaluate a trained loan classification model for Responsible AI expectations--ensuring no disproportionate impact on protected groups, evaluating error across segments, and verifying prediction transparency--you can employ SHAP (SHapley Additive exPlanations) values to assess feature importance.

This approach allows you to identify which variables (e.g., credit history, debt levels) drive the model's predictions, fostering trust and fairness.

Feature Importance for Transparency: Use SHAP (model-agnostic) or LIME (local approximations) to explain why the model approved or denied a loan. These techniques identify how each feature contributes to individual predictions.

[E]

To ensure a trained loan approval classification model meets responsible AI expectations-- specifically, that it does not disproportionately impact protected groups and that errors can be evaluated across segments--you should analyze error rates across defined demographic cohorts using Fairness-Aware Machine Learning metrics.

#### NEW QUESTION # 75

A company's platform engineers manage the resource settings and governance of Microsoft Foundry.

Developers must be able to create and update project assets but must not be able to change resource-level configurations.

You need to enforce least privilege access for the engineers and developers.

Which two actions should you perform? Each correct answer presents part of the solution.

Choose two.

NOTE: Each correct selection is worth one point.

- **A. Assign a resource-level Azure AI Administrator role to the platform engineers.**
- **B. Assign the Azure AI Developer role to the developers.**
- C. Share a single API key across all teams.
- D. Disable Microsoft Entra ID authentication for the Microsoft Foundry resource.

**Answer: A,B**

Explanation:

[A]

Engineer Permissions (Hub Scope)

Engineers require the ability to manage infrastructure, networking, and global security settings.

Role: Azure AI Administrator or Contributor.

Assignment Scope: Assign at the Foundry Hub/Resource level.

Capabilities: They can manage virtual networks, customer-managed keys, and shared connections (e.g., Azure OpenAI) that all projects inherit.

[C]

### Developer Permissions (Project Scope)

Developers should be restricted from changing the underlying resource configurations but need full access to their specific AI workloads.

Role: Azure AI Developer or Project Contributor.

Assignment Scope: Assign strictly at the Foundry Project level.

Capabilities: This allows them to create and update project assets (agents, flows, evaluations) and deploy models without permission to modify Hub-level infrastructure or security settings Reference:

### NEW QUESTION # 76

You deploy a new model version to a managed online endpoint. You must test it with 10% traffic and automatically roll back if latency or error rate increases beyond threshold. What should you configure?

- A. Batch endpoint validation
- B. Separate endpoint for testing
- C. Traffic splitting with monitoring alerts
- D. Manual testing workflow

**Answer: C**

Explanation:

Traffic splitting enables controlled rollout of a new model version by directing a percentage of requests to it. Combined with monitoring alerts, it supports automated rollback when performance degrades. Separate endpoints lack built-in traffic management and do not provide seamless or automated rollback capabilities.

### NEW QUESTION # 77

.....

The Operationalizing Machine Learning and Generative AI Solutions (AI-300) practice questions have a close resemblance with the actual Operationalizing Machine Learning and Generative AI Solutions (AI-300) exam. Our Microsoft AI-300 exam dumps give help to give you an idea about the actual Operationalizing Machine Learning and Generative AI Solutions (AI-300) exam. You can attempt multiple Operationalizing Machine Learning and Generative AI Solutions (AI-300) exam questions on the software to improve your performance.
