We are committed to providing you with services with great quality that will help you reduce stress during the process of preparation for GH-900 Exam, so that you can treat the exam with a good attitude. I believe that if you select our GH-900 study questions, success is not far away.

Microsoft GitHub Foundations Sample Questions (Q101-Q106):

NEW QUESTION # 101

Which of the following is an Innersource development practice?

- A. Removing open source code from the organization
- B. Making all repositories publicly accessible
- C. Sharing code between teams within the organization
- D. Adopting open source code into the organization

Answer: C

Explanation:

Innersource is a development practice where an organization adopts open-source development methodologies within its own internal environment. The primary goal of innersource is to break down silos and encourage collaboration across different teams within the organization.

* Sharing Code Between Teams:

* Option B is correct because innersource involves sharing code between teams within the organization, similar to how open-source communities share code across the public domain. This practice fosters collaboration, improves code quality, and allows for reuse of code, reducing duplication of efforts.

* Incorrect Options:

* Option A is incorrect because adopting open-source code into the organization is related to using open-source software, not specifically to innersource practices.

* Option C is incorrect because removing open-source code from the organization is contrary to the principles of both open source and innersource.

* Option D is incorrect because making all repositories publicly accessible refers to open source, not innersource. Innersource typically involves keeping code internal to the organization.

NEW QUESTION # 102

When creating a repository from a template, what will the new repository contain?

- A. contributors
- B. Default branch
- C. pull requests
- D. commit history

Answer: B

NEW QUESTION # 103

As a repository admin, which alerts can you see from the security tab of a repository? (Each answer presents a complete solution. Choose three.)

- A. Secret Scanning
- B. Branch Protection
- C. Code Scanning
- D. Push Protection Bypass
- E. Dependabot

Answer: A,C,E

NEW QUESTION # 104

An employee needs to find all issues within organization "Avocado " containing text " 404 error " and a " guacamole " label. Which of the following steps would be best to search for these results?

- A. Enter query org:Avocado label:guacamole " 404 error " in the search bar. Select " Issues " in the Filter by section.
- B. Go to " Avocado " organization. Select Issues under a repository. Filter issues with a " guacamole " label.
- C. Enter query org:Avocado is:issue label:guacamole " 404 error " in the search bar.
- D. Go to the Avocado organization settings. Select Repository defaults under Repository. Scroll to Repository labels and select the ' guacamole ' label.

Answer: C

Explanation:

GitHub provides a powerful search syntax to filter and find specific issues across repositories in an organization.

* Search Query Syntax:

* Option A is correct because the query `org:Avocado is:issue label:guacamole "404 error"` is the best way to search for all issues within the "Avocado" organization that contain the text "404 error" and are labeled with "guacamole". This query is precise and leverages GitHub's advanced search capabilities.

* Incorrect Options:

* Option B is incorrect because it requires manual filtering in a specific repository rather than searching across the entire organization.

* Option C is incorrect because selecting "Issues" in the filter by section is redundant when using the query `is:issue`.

* Option D is incorrect because accessing organization settings to look for repository labels is not relevant to searching for issues.
