ISTQB Certified Tester - Foundation Level Extension - Agile Tester Latest Pdf Material & CTFL-AT Valid Practice Files & ISTQB Certified Tester - Foundation Level Extension - Agile Tester Updated Study Guide

With the rapid development of the world economy and frequent contacts between different countries, the talent competition is increasing day by day, and the employment pressure is also increasing day by day. If you want to get a better job and relieve your employment pressure, it is essential for you to get the CTFL-AT Certification. However, due to the severe employment situation, more and more people have been crazy for passing the CTFL-AT exam by taking examinations, the exam has also been more and more difficult to pass.

ISQI ISTQB Certified Tester - Foundation Level Extension - Agile Tester Sample Questions (Q68-Q73):

NEW QUESTION # 68

Which agile development approach incorporates the following practices:

- * a project is divided into iterations called sprints
- * each sprint results in a potentially releasable/shippable product?

- A. Extreme Programming

- B. Scrum
- C. Kanban
- D. Continuous Integration

Answer: B

NEW QUESTION # 69

Which one of the following is a testable acceptance criterion?

- A. The solution shall support business processes.
- B. The system shall be easy to use.
- C. The tools for testing are tested before use and are meeting the requirements.
- D. The response time to confirm a customer submission must not exceed 5 seconds.

Answer: D

Explanation:

A testable acceptance criterion is a condition that can be verified or measured objectively by the tester, customer, or stakeholder. It should be specific, measurable, achievable, relevant, and time-bound (SMART). A testable acceptance criterion should also be written from the user's perspective, achievable within the sprint, and written before development begins.

Among the four options, only option C meets these criteria. It is specific (the response time to confirm a customer submission), measurable (must not exceed 5 seconds), achievable (within the technical and business constraints), relevant (to the user's needs and expectations), and time-bound (must be met in every sprint). It is also written from the user's perspective, testable (by measuring the response time), and written before development (as part of the user story definition).

Option A is not testable because it is vague and subjective. What does it mean to support business processes?

How can this be verified or measured? Option B is also not testable because it is subjective and ambiguous.

What does it mean to be easy to use? How can this be verified or measured? Option D is not testable because it is not written from the user's perspective. It is an internal quality criterion for the testing team, not an acceptance criterion for the product or feature.

NEW QUESTION # 70

Consider the following acceptance criterion associated to a user story:

"A maximum of 0.0002 failures per hour in the specified operational conditions over at least ten days of testing must be achieved."

Which of the following aspects of testability is best described in this acceptance criterion?

- A. External interfaces
- B. Functional behavior
- C. Scenarios
- D. Quality characteristics

Answer: D

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

From CTFL-AT Syllabus v4.0, Section 2.1 Acceptance Criteria and Testability, and Section 3.1:

"Acceptance criteria may also address non-functional quality characteristics such as reliability, performance, and usability." The criterion references failure rate over time, which is a reliability attribute, making Option D (Quality characteristics) the correct answer.

* Option A (Scenarios) refers to usage paths.

* Option B refers to functional correctness.

* Option C refers to interface interaction points.

CTFL-AT Syllabus v4.0, Sections 2.1, 3.1

Learning Objective (K2) - Understand testability related to quality characteristics

NEW QUESTION # 71

You have been asked to execute an exploratory testing session on Park & Ride system. The test charter has been titled as "Buy a

bus ticket". As a result, a number of defects were reported, the titles of which are listed below.
Which defect is out of scope for the given test charter?

- A. Failed to buy a bus ticket when the network connection to the Central System is down.
- B. Price for a bus ticket was calculated incorrectly.
- C. Failed to buy a bus ticket after 18:00.
- **D. Payment for parking ticket is restricted to cash only (no credit card supported).**

Answer: D

Explanation:

The test charter for the exploratory testing session is focused on buying a bus ticket, not a parking ticket.

Therefore, any defect related to the payment for parking ticket is out of scope for the given test charter. The other defects are related to the functionality, usability, or reliability of buying a bus ticket, which are in scope for the test charter. ¹: ISTQB Certified Tester Foundation Level Agile Tester Extension Syllabus, Version 2014, Section 2.3.2 Exploratory Testing 2: ISTQB Certified Tester Foundation Level Agile Tester Extension Syllabus, Version 2014, Section 2.3.2.1 Test Charter 3: [ISTQB Glossary of Testing Terms, Version 3.2, 2017, Definition of Test Charter]

NEW QUESTION # 72

Based on the skills required for testers in Agile teams, which of the following activities would you expect least likely to be performed by testers in Agile projects?

- **A. Tracking the failures of the unit tests that are written when using the Test-Driven Development practice**
- B. Working collaboratively with a developer to develop and test a feature
- C. Identifying and updating test cases from previous iterations that are affected by the changes made in the current iteration
- D. Actively participating in specification workshops aimed at clarifying user stories through examples that will be transformed into tests

Answer: A

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

From CTFL-AT Syllabus v4.0, Section 3.2 Test-Driven Development, and 1.3 The Whole-Team Approach, testers:

"Collaborate in test-related activities including test case creation, exploratory testing, and user story clarification."

"Unit tests are typically the responsibility of developers, especially in TDD practices." Therefore, Option A is least likely, as unit test tracking in TDD is primarily a developer responsibility, not a tester's routine task.

* Options B, C, and D all describe key Agile tester activities, such as maintaining regression tests, collaborating with developers, and participating in specification workshops (BDD/ATDD practices)
