When comparing fine-grained Personal Access Tokens (PATs) with classic PATs, which of the following statements is accurate?

- A. Fine-grained PATs permissions can be scoped to specific repositories.
- B. Classic PATs can be restricted to specific organizations, but fine-grained PATs cannot.
- C. Classic PATs offer more permission controls than fine-grained PATs.
- D. Fine-grained PATs automatically renew while classic PATs require manual renewal.

Answer: A

Explanation:
Fine-grained personal access tokens let you scope permissions down to individual repositories, whereas classic PATs grant access across every repo the user can reach.

- A. PATs support fewer GitHub APIs than Apps
- B. GitHub Apps are required to pass SAML assertions
- C. PATs cannot be used in GitHub Actions
- D. GitHub Apps have time-limited installation tokens with scoped access

Answer: D

GitHub Apps issue short-lived installation tokens that you scope to only the permissions and repositories your automation needs, reducing blast radius and automatically rotating credentials.

- A. It creates a pull request to update the direct dependency to a version that resolves the vulnerability.
- B. It sends an email to the repository owner but does not alter code.
- C. It opens a pull request to update the affected package directly, regardless of version compatibility.
- D. It automatically removes the package from the repository.

- B. Billing is based on number of total users in the enterprise
- C. Billing is based on the number of users created in Azure AD
- D. Billing is based on owners and members of GitHub organizations

Answer: B

Billing for GitHub Enterprise Cloud under metered (usage-based) billing is calculated by the total number of Enterprise Managed Users (and other license-consuming accounts) in your enterprise - each EMU consumes a seat and contributes to the monthly bill.

NEW QUESTION # 56

You discover that a secret (e.g., a token or password) was accidentally committed to a GitHub repository. What is the first step you should take to mitigate the risk?

- A. Contact GitHub Support to remove the secret from all forks and clones of the repository.
- B. Revoke and/or rotate the secret to render it unusable, then assess whether history rewriting is necessary.
- C. Delete the repository and create a new one to ensure the secret is no longer accessible.
- D. Rewrite the repository history using git filter-repo or BFG Repo-Cleaner to remove the secret from all commits.
