Almost every Nutanix Certified Professional - Unified Storage (NCP-US) v6.10 (NCP-US-6.10) test candidate nowadays is confused about the Nutanix Certified Professional - Unified Storage (NCP-US) v6.10 (NCP-US-6.10) study material. They don't know where to download updated NCP-US-6.10 questions that can help them prepare quickly for the Nutanix Certified Professional - Unified Storage (NCP-US) v6.10 (NCP-US-6.10) test. Some rely on outdated Nutanix Certified Professional - Unified Storage (NCP-US) v6.10 (NCP-US-6.10) questions and suffer from the loss of money and time.

The NCP-US-6.10 PDF is the collection of real, valid, and updated Nutanix Certified Professional - Unified Storage (NCP-US) v6.10 (NCP-US-6.10) practice questions. The Nutanix NCP-US-6.10 PDF dumps file works with all smart devices. You can use the NCP-US-6.10 PDF questions on your tablet, smartphone, or laptop and start NCP-US-6.10 Exam Preparation anytime and anywhere. The NCP-US-6.10 dumps PDF provides you with everything that you must need in NCP-US-6.10 exam preparation and enable you to crack the final NCP-US-6.10 exam quickly.

Review Nutanix NCP-US-6.10 Guide, NCP-US-6.10 Exam Actual Questions

A free demo of NCP-US-6.10 practice test questions and up to 1 year of free updates are also available at Pass4suresVCE. So, this is the time to download valid Nutanix NCP-US-6.10 exam questions and start studying. There is no room for delays in Nutanix Certified Professional - Unified Storage (NCP-US) v6.10 (NCP-US-6.10) preparation exams or second thoughts when you know that you have to survive the competition and safeguard your job.

Nutanix Certified Professional - Unified Storage (NCP-US) v6.10 Sample Questions (Q95-Q100):

NEW QUESTION # 95

An administrator wants to utilize File Analytics to send anomaly alerts and data to email recipients. Which statement describes when File Analytics will send the emails?

- A. Whenever an anomaly is detected.
- B. When a minimum of anomalies are detected.
- **C. As defined in the Anomaly Rules.**
- D. Every 15 minutes.

Answer: C

Explanation:

Nutanix File Analytics sends anomaly alerts and data to email recipients as defined in the Anomaly Rules.

File Analytics uses anomaly detection to identify unusual activities on the file server, such as permission changes, excessive file

access, or potential ransomware behavior. Administrators can configure anomaly rules to specify which activities to monitor and how to handle notifications, including sending emails to designated recipients based on the defined rules.

The Nutanix Unified Storage Administration (NUSA) course explains that "File Analytics allows administrators to define anomaly rules to detect suspicious activities, with email notifications configured as part of the rule settings to alert recipients when specific conditions are met." This ensures that emails are sent only when the criteria in the anomaly rules are triggered, allowing for targeted and timely alerts.

The Nutanix Certified Professional - Unified Storage (NCP-US) study guide further states that "anomaly rules in File Analytics are customizable, enabling administrators to set thresholds, conditions, and notification preferences, including email alerts, to ensure timely responses to detected anomalies." The timing and frequency of email notifications depend on the configuration of the anomaly rules, not a fixed schedule or automatic detection.

The other options are incorrect:

* Whenever an anomaly is detected: While anomalies trigger alerts, emails are sent only if the anomaly rules are configured to do so. Not every detected anomaly automatically results in an email unless specified in the rules.

* Every 15 minutes: File Analytics does not send emails on a fixed 15-minute schedule; notifications are event-driven based on anomaly rule triggers.

* When a minimum of anomalies are detected: There is no concept of a "minimum number of anomalies" in File Analytics; alerts are sent based on the specific conditions defined in the anomaly rules.

The NUSA course documentation emphasizes that "File Analytics anomaly rules provide granular control over alert notifications, with email alerts sent to recipients as specified in the rule configuration, ensuring timely communication of critical events." References: Nutanix Unified Storage Administration (NUSA) Course, Section on File Analytics: "Configuring anomaly rules and email notifications." Nutanix Certified Professional - Unified Storage (NCP-US) Study Guide, Topic 3: Analyze and Monitor Nutanix Unified Storage, Subtopic: "Anomaly detection and notification settings in File Analytics." Nutanix Documentation (<https://www.nutanix.com>), Nutanix File Analytics Guide: "Setting up anomaly rules for email alerts."

NEW QUESTION # 96

An administrator has an existing four-node Nutanix cluster at a primary site with three FSVM instances deployed. They want to configure Smart DR on a five-node Nutanix cluster at the recovery site.

How many FSVMs should be deployed on the recovery site for Smart DR?

- A. 0
- B. 1
- C. 2
- D. 3

Answer: C

Explanation:

Smart DR (Disaster Recovery) for Nutanix Files ensures that the file server VMs (FSVMs) at the recovery site mirror the configuration of the primary site. Specifically, it requires that:

"The number of FSVMs deployed at the recovery site must match the number of FSVMs at the primary site." The primary site has 3 FSVMs.

Therefore, the recovery site must also have 3 FSVMs deployed to ensure consistency and proper operation of Smart DR for file services.

NEW QUESTION # 97

An administrator needs to create a volume group (VG) that will host highly sensitive data. These two requirements must be met:

* The VG must be accessible only by the OS where the data is going to be used by the application

* The access needs to be secured with an additional security login

Which three features or settings will help the administrator meet those requirements? (Choose two.)

- A. All CVMs must have RDMA-capable NICs to facilitate direct peer-to-peer communication.
- B. On-the-wire encryption must be enabled for all iSCSI traffic.
- C. The VG configuration must contain only the IQN of the client OS where the application runs.
- D. CHAP authentication needs to be setup for that Volume Group.

Answer: C,D

Explanation:

The Nutanix Unified Storage Administration (NUSA) course module "Configuring and Securing Volume Groups" specifies that to

secure access to volume groups (VGs) containing sensitive data:

* CHAP Authentication(Challenge-Handshake Authentication Protocol) provides an additional layer of security by requiring authentication before iSCSI connections are established. This satisfies the second requirement: "The access needs to be secured with an additional security login."

* IQN-based Access Controlensures that only the intended initiator (the client OS) can access the VG by explicitly specifying the IQN of the client in the VG configuration. This meets the first requirement:

"The VG must be accessible only by the OS where the data is going to be used by the application." WhileOn-the-wire encryptionis beneficial for data confidentiality, the course emphasizes that CHAP and IQN-based controls are the specific mechanisms for access security.RDMA-capable NICsare not relevant to restricting access or security in this context.

NEW QUESTION # 98

An administrator has created a multi-protocol department share on Nutanix Files with the following configuration:

- * Max size of 800GB
- * SMB as the primary protocol
- * NFS configured for read-write access
- * Quota policy for AD group HR, limiting to 20GB
- * Second quota policy of 30GB for AD group Finance

A user who is a member of the HR group receives daily email notifications that they have consumed all available space but is still able to write new files. Another user in the Finance group using Linux can write files and receives no email notification.

What should an administrator do to restrict the HR user from writing new data?

- A. Set hard limit enforcement.
- B. Remove the default quota policy.
- C. Reduce the Finance quota limit.
- D. Set a user level quota.

Answer: A

Explanation:

In Nutanix Files,quotascan be configured as eithersoft limitsorhard limits:

- * Soft Limit:Users receive notifications (e.g., emails) when they exceed their quota, but they arestill able to write new data.
- * Hard Limit:Strict enforcement-userscannot write new databeyond the quota.

In this scenario, the HR user is getting email notifications, meaning a soft limit is currently in place. However, they can still write new data because thehard limit enforcementhas not been enabled.

The NUSA course explicitly states:

"For a quota to prevent further writes, you must enable hard limit enforcement. Otherwise, users will only receive notifications but will not be blocked from writing." Therefore, torestrict HR users from writing new data, the administrator should enablehard limit enforcementon the quota policy.

NEW QUESTION # 99

Which feature allows for enforcing strict capacity limits for individual users?

- A. Quota Policy with a Hard Quota Limit
- B. Storage Policy with a Soft Storage Capacity Limit
- C. Storage Policy with a Hard Storage Capacity Limit
- D. Quota Policy with a Soft Quota Limit

Answer: A

Explanation:

To enforce strict capacity limits for individual users in Nutanix Files, the administrator should use aQuota Policy with a Hard Quota Limit. Nutanix Files supports quota policies to manage storage usage at the user, group, or share level, and a hard quota limit ensures that users cannot exceed the specified capacity, enforcing strict control over storage consumption.

TheNutanix Unified Storage Administration (NUSA)course states, "Nutanix Files supports quota policies with hard limits to enforce strict capacity restrictions for individual users, preventing them from exceeding their allocated storage." A hard quota limit blocks write operations once the user reaches the defined capacity, ensuring compliance with storage restrictions. This is particularly useful

for managing storage in multi-tenant environments or ensuring fair resource allocation.

The Nutanix Certified Professional - Unified Storage (NCP-US) study guide further elaborates that "a Quota Policy with a Hard Quota Limit is the recommended approach for enforcing strict capacity limits per user in Nutanix Files, as it denies further writes when the limit is reached." In contrast, a soft quota limit only generates warnings but allows users to exceed the limit, which does not meet the requirement for strict enforcement.

The other options are incorrect:

* Storage Policy with a Hard Storage Capacity Limit: Storage policies in Nutanix typically apply to data placement or tiering (e.g., in Nutanix Volumes or Objects) and are not used for user-level quotas in Nutanix Files.

* Quota Policy with a Soft Quota Limit: A soft quota limit only provides warnings when the limit is exceeded, allowing users to continue writing data, which does not enforce strict capacity limits.

* Storage Policy with a Soft Storage Capacity Limit: Similar to the above, this is not a user-level quota mechanism and does not enforce strict limits.

The NUSA course documentation emphasizes that "Quota Policies with Hard Quota Limits are the primary mechanism in Nutanix Files for enforcing strict capacity limits for individual users, ensuring they cannot exceed their allocated storage." References: Nutanix Unified Storage Administration (NUSA) Course, Section on Nutanix Files: "Configuring quota policies for user storage limits." Nutanix Certified Professional - Unified Storage (NCP-US) Study Guide, Topic 2: Configure and Utilize Nutanix Unified Storage, Subtopic: "Quota management in Nutanix Files." Nutanix Documentation (<https://www.nutanix.com>), Nutanix Files Administration Guide: "Setting hard quota limits for users."

NEW QUESTION # 100

.....

Nutanix certification NCP-US-6.10 exam has become a very popular test in the IT industry, but in order to pass the exam you need to spend a lot of time and effort to master relevant IT professional knowledge. In such a time is so precious society, time is money. Pass4suresVCE provide a training scheme for Nutanix Certification NCP-US-6.10 Exam, which only needs 20 hours to complete and can help you well consolidate the related IT professional knowledge to let you have a good preparation for your first time to participate in Nutanix certification NCP-US-6.10 exam.
