Pass Guaranteed Quiz 2026 CIPM: The Best Exam Certified Information Privacy Manager (CIPM) Questions Pdf

Our CIPM study materials are regarded as the most excellent practice materials by authority. Our company is dedicated to researching, manufacturing, selling and service of the CIPM study materials. Also, we have our own research center and experts team. So our products can quickly meet the new demands of customers. That is why our CIPM Study Materials are popular among

candidates. We really take their requirements into account. Perhaps you know nothing about our CIPM study materials. Our free demo will help you know our study materials comprehensively.

IAPP Certified Information Privacy Manager (CIPM) Sample Questions (Q195-Q200):

NEW QUESTION # 195
SCENARIO
Please use the following to answer the next question:
As the director of data protection for Consolidated Records Corporation, you are justifiably pleased with your accomplishments so far. Your hiring was precipitated by warnings from regulatory agencies following a series of relatively minor data breaches that could easily have been worse. However, you have not had a reportable incident for the three years that you have been with the company. In fact, you consider your program a model that others in the data storage industry may note in their own program development. You started the program at Consolidated from a jumbled mix of policies and procedures and worked toward coherence across departments and throughout operations. You were aided along the way by the program's sponsor, the vice president of operations, as well as by a Privacy Team that started from a clear understanding of the need for change.
Initially, your work was greeted with little confidence or enthusiasm by the company's "old guard" among both the executive team and frontline personnel working with data and interfacing with clients. Through the use of metrics that showed the costs not only of the breaches that had occurred, but also projections of the costs that easily could occur given the current state of operations, you soon had the leaders and key decision-makers largely on your side. Many of the other employees were more resistant, but face-to-face meetings with each department and the development of a baseline privacy training program achieved sufficient "buy-in" to begin putting the proper procedures into place.
Now, privacy protection is an accepted component of all current operations involving personal or protected data and must be part of the end product of any process of technological development. While your approach is not systematic, it is fairly effective.
You are left contemplating: What must be done to maintain the program and develop it beyond just a data breach prevention program? How can you build on your success? What are the next action steps?
What practice would afford the Director the most rigorous way to check on the program's compliance with laws, regulations and industry best practices?

- A. Forensics
- B. Monitoring
- C. Assessment
- D. Auditing

Answer: B

NEW QUESTION # 196
When a data breach incident has occurred. the first priority is to determine?

- A. How to contain the breach.
- B. Who caused the breach.
- C. When the breach occurred.
- D. How the breach occurred.

Answer: A

Explanation:
When a data breach incident has occurred, the first priority is to determine how to contain the breach.
Containment means stopping or minimizing the further loss or unauthorized disclosure of personal data, as well as preserving evidence for investigation and remediation. Containment may involve isolating affected systems, devices, or networks; changing access credentials; blocking malicious IP addresses; or notifying relevant parties such as law enforcement or security experts. After containing the breach, the next steps are to assess the impact and severity of the breach, notify the affected individuals and authorities if required, evaluate the causes and risks of the breach, and implement measures to prevent future breaches1, 2. NEW QUESTION # 197
SCENARIO

Please use the following to answer the next QUESTION:

Richard McAdams recently graduated law school and decided to return to the small town of Lexington, Virginia to help run his aging grandfather's law practice. The elder McAdams desired a limited, lighter role in the practice, with the hope that his grandson would eventually take over when he fully retires. In addition to hiring Richard, Mr. McAdams employs two paralegals, an administrative assistant, and a part-time IT specialist who handles all of their basic networking needs. He plans to hire more employees once Richard gets settled and assesses the office's strategies for growth.

Immediately upon arrival, Richard was amazed at the amount of work that needed to done in order to modernize the office, mostly in regard to the handling of clients' personal data. His first goal is to digitize all the records kept in file cabinets, as many of the documents contain personally identifiable financial and medical data. Also, Richard has noticed the massive amount of copying by the administrative assistant throughout the day, a practice that not only adds daily to the number of files in the file cabinets, but may create security issues unless a formal policy is firmly in place Richard is also concerned with the overuse of the communal copier/ printer located in plain view of clients who frequent the building. Yet another area of concern is the use of the same fax machine by all of the employees. Richard hopes to reduce its use dramatically in order to ensure that personal data receives the utmost security and protection, and eventually move toward a strict Internet faxing policy by the year's end.

Richard expressed his concerns to his grandfather, who agreed, that updating data storage, data security, and an overall approach to increasing the protection of personal data in all facets is necessary Mr. McAdams granted him the freedom and authority to do so. Now Richard is not only beginning a career as an attorney, but also functioning as the privacy officer of the small firm. Richard plans to meet with the IT employee the following day, to get insight into how the office computer system is currently set-up and managed. Richard believes that a transition from the use of fax machine to Internet faxing provides all of the following security benefits EXCEPT?

- A. Greater accessibility to the faxes at an off-site location.
- B. Reduction of the risk of data being seen or copied by unauthorized personnel.
- C. The ability to encrypt the transmitted faxes through a secure server.
- D. The ability to store faxes electronically, either on the user's PC or a password-protected network server.

Answer: A

Explanation:

A transition from the use of fax machine to Internet faxing does not provide the security benefit of greater accessibility to the faxes at an off-site location. This is because Internet faxing requires a secure internet connection and a compatible device to access the faxes online. If the user is at an off-site location that does not have these requirements, they may not be able to access their faxes. Furthermore, greater accessibility may not necessarily be a security benefit, as it may also increase the risk of unauthorized access or interception by third parties. Therefore, this option is not a security benefit of Internet faxing.

The other options are security benefits of Internet faxing. The ability to encrypt the transmitted faxes through a secure server ensures that the faxes are protected from eavesdropping or tampering during transmission. The reduction of the risk of data being seen or copied by unauthorized personnel eliminates the need for physical security measures such as locks or shredders for fax machines and paper documents. The ability to store faxes electronically, either on the user's PC or a password-protected network server, allows for better control and management of the faxes and reduces the storage space and costs associated with paper documents.

NEW QUESTION # 198
If done correctly, how can a Data Protection Impact Assessment (DPIA) create a win/win scenario for organizations and individuals?

- A. By quickly identifying potentially problematic data attributes and reducing the risk exposure.
- B. By allowing Data Controllers to solicit feedback from individuals about how they feel about the potential data processing.
- C. By better informing about the risks associated with the processing activity and improving the organization's transparency with individuals.
- D. By enabling Data Controllers to be proactive in their analysis of processing activities and ensuring compliance with the law.

Answer: C

Explanation:

A Data Protection Impact Assessment (DPIA) is a process that organizations use to evaluate the potential risks associated with a specific data processing activity, and to identify and implement measures to mitigate those risks. By conducting a DPIA, organizations can proactively identify and address potential privacy concerns before they become a problem, and ensure compliance with data protection laws and regulations.

When organizations are transparent about their data processing activities and the risks associated with them, individuals are better

informed about how their personal data is being used and can make more informed decisions about whether or not to provide their personal data. This creates a win/win scenario for organizations and individuals, as organizations are able to continue processing personal data in a compliant and transparent manner, while individuals are able to trust that their personal data is being used responsibly.

Additionally, by engaging with individuals in the DPIA process and soliciting their feedback, organizations can better understand the potential impact of their data processing activities on individuals and take steps to mitigate any negative impacts.

NEW QUESTION # 199

When supporting the business and data privacy program expanding into a new jurisdiction, it is important to do all of the following EXCEPT?

- A. Perform an assessment of the laws applicable in that new jurisdiction.
- B. Consider culture and whether the privacy framework will need to account for changes in culture.
- C. Identify the stakeholders.
- D. Appoint a new Privacy Officer (PO) for that jurisdiction.

Answer: D

Explanation:
Explanation
When expanding into a new jurisdiction, it is not necessary to appoint a new Privacy Officer (PO) for that jurisdiction, unless the local law requires it. The other options are important steps to ensure compliance with the new jurisdiction's privacy laws and regulations, as well as to align the privacy program with the business objectives and culture of the new market.
