But before settling on any one method, you make sure that it addresses their specific concerns about the 010-160 exam, such as whether or not the platform they are joining will aid them in passing the Linux Essentials Certificate Exam - version 1.6 (010-160) exam on the first try, whether or not it will be worthwhile, and will it provide the necessary 010-160 Questions.

Lpi Linux Essentials Certificate Exam - version 1.6 Sample Questions (Q35-Q40):

NEW QUESTION # 35

Running the command rm Downloadsleads to the following error:

rm: cannot remove 'Downloads/': Is a directory

Which of the following commands can be used instead to remove Downloads, assuming Downloadsis empty? (Choose two.)

- A. rmdir Downloads
- B. rm -r Downloads
- C. dir -r Downloads
- D. rem Downloads
- E. undir Downloads

Answer: A,B

NEW QUESTION # 36

Which permissions are set on a regular file once the permissions have been modified with the command chmod 654 file.txt?

- A. -wxr-x--x
- B. -rw-r-xr--
- C. -rwxrw---x
- D. drw-r-xr--
- E. d-wxr-x--

Answer: B

Explanation:
Explanation
The chmod command is used to change the permissions of files and directories. The permissions are represented by three sets of three characters, indicating the permissions for the owner, the group, and the others. Each character can be either r (read), w (write), x (execute), or - (no permission). The chmod command can use either symbolic or numeric mode to specify the permissions. In this question, the numeric mode is used, which consists of three digits from 0 to 7. Each digit is the sum of the permissions for each set, where r is 4, w is 2, and x is 1. For example, 7 means rwx, 6 means rw-, and 4 means r-. Therefore, the command chmod 654 file.txt sets the permissions as follows:
* The first digit 6 means rw- for the owner, which means the owner can read and write the file, but not execute it.
* The second digit 5 means r-x for the group, which means the group can read and execute the file, but not write it.
* The third digit 4 means r-- for the others, which means the others can only read the file, but not write or execute it.
The resulting permissions are -rw-r-xr-, which is the correct answer. The other options are incorrect because they either have the wrong permissions or the wrong file type. A regular file does not have the d (directory) prefix, and a directory cannot have the - (no file type) prefix. References:

NEW QUESTION # 37

FILL BLANK

What keyword is used in a shell script to begin a loop? (Specify one keyword only, without any additional information.)

Answer:

Explanation:
for Explanation The keyword for is used in a shell script to begin a loop that iterates over a list of items or a range of numbers.
The syntax of the for loop is as follows:
for <var> in <list> do <commands> done
The variable <var> is assigned to each element of the <list> in turn, and the <commands> are executed for each iteration. The <list> can be a sequence of words, numbers, filenames, or other values. If the <list> is omitted, the for loop will iterate over the positional parameters ($1, $2, ...). The do and done keywords mark the beginning and the end of the loop body, respectively. The for loop is one of the three types of loops in shell scripting, along with the while and until loops. References: 1: Looping Statements |Shell Script
