We promise you that if you fail to pass the exam after using SPLK-2002 training materials of us, we will give you full refund. We are pass guarantee and money back guarantee if you fail to pass the exam. Besides, SPLK-2002 exam dumps are high-quality, you can pass the exam just one time if you choose us. We offer you free update for one year for SPLK-2002 Training Materials, and our system will send the update version to your email automatically. We have online and offline service, the staff possess the professional knowledge for SPLK-2002 exam dumps, if you have any questions, don't hesitate to contact us.

Splunk SPLK-2002 certification exam is an essential certification for IT professionals who want to prove their expertise in Splunk Enterprise architecture. Splunk Enterprise Certified Architect certification exam covers a wide range of topics related to Splunk Enterprise, and passing the exam requires a deep understanding of the platform. Splunk Enterprise Certified Architect certification is recognized globally and can help professionals advance their careers.

The SPLK-2002 Exam is designed to test the skills and knowledge of IT professionals who are responsible for designing and deploying Splunk environments. SPLK-2002 exam covers a range of topics, including architecture, deployment, data management, user management, search and reporting, and troubleshooting. It is intended for individuals who have experience working with Splunk and are looking to take their skills to the next level.

SPLK-2002 Exam Revision Plan, SPLK-2002 Trusted Exam Resource

SPLK-2002 certifications establish your professional worth beyond your estimation. Procuring SPLK-2002 certification is to make sure an extensive range of opportunities in the industry and doubling your present earning prospects. Free4Dump' SPLK-2002 Practice Test dumps provide you the best practical pathway to obtain the most career-enhancing, SPLK-2002 certification.

To prepare for the SPLK-2002 Exam, candidates must have a deep understanding of Splunk Enterprise and its various components, including the search processing language (SPL), data models, and knowledge objects. They must also have experience in designing and implementing complex Splunk deployments, including the ability to troubleshoot issues and optimize performance.

Splunk Enterprise Certified Architect Sample Questions (Q23-Q28):

NEW QUESTION # 23

In an indexer cluster, what tasks does the cluster manager perform? (select all that apply)

- A. Generates and maintains the list of primary searchable buckets.
- B. If Indexer Discovery is enabled, provides the list of available peer nodes to forwarders.
- C. Distributes app bundles to peer nodes.

- D. Ensures all peer nodes are always using the same version of Splunk.

Answer: A,B,C

Explanation:

The correct tasks that the cluster manager performs in an indexer cluster are A. Generates and maintains the list of primary searchable buckets, B. If Indexer Discovery is enabled, provides the list of available peer nodes to forwarders, and D. Distributes app bundles to peer nodes. According to the Splunk documentation¹, the cluster manager is responsible for these tasks, as well as managing the replication and search factors, coordinating the replication and search activities, and providing a web interface for monitoring and managing the cluster. Option C, ensuring all peer nodes are always using the same version of Splunk, is not a task of the cluster manager, but a requirement for the cluster to function properly². Therefore, option C is incorrect, and options A, B, and D are correct.

1: About the cluster manager 2: Requirements and compatibility for indexer clusters

NEW QUESTION # 24

Which search will show all deployment client messages from the client (UF)?

- A. `index=_internal component=DS* host=<ds> | stats count by message`
- **B. `index=_internal component=DC* host=<uf> | stats count by message`**
- C. `index=_audit component=DC* host=<ds> | stats count by message`
- D. `index=_audit component=DC* host=<uf> | stats count by message`

Answer: B

Explanation:

Explanation

The `index=_internal component=DC* host=<uf>` search will show all deployment client messages from the universal forwarder. The component field indicates the type of Splunk component that generated the message, and the host field indicates the host name of the machine that sent the message. The `index=_audit component=DC* host=<uf>` search will not return any results, because the deployment client messages are not stored in the `_audit` index. The `index=_internal component=DS* host=<ds>` search will show the deployment server messages from the deployment server, not the client. The `index=_audit component=DS* host=<ds>` search will also not return any results, for the same reason as above.

NEW QUESTION # 25

Which of the following artifacts are included in a Splunk diag file? (Select all that apply.)

- **A. Configuration files.**
- B. Customer data.
- C. OS settings.
- **D. Internal logs.**

Answer: A,D

Explanation:

The following artifacts are included in a Splunk diag file:

* Internal logs. These are the log files that Splunk generates to record its own activities, such as `splunkd`,

`log`, `metrics.log`, `audit.log`, and others. These logs can help troubleshoot Splunk issues and monitor Splunk performance.

* Configuration files. These are the files that Splunk uses to configure various aspects of its operation, such as `server.conf`, `indexes.conf`, `props.conf`, `transforms.conf`, and others. These files can help understand Splunk settings and behavior. The following artifacts are not included in a Splunk diag file:

* OS settings. These are the settings of the operating system that Splunk runs on, such as the kernel version, the memory size, the disk space, and others. These settings are not part of the Splunk diag file, but they can be collected separately using the `diag --os` option.

* Customer data. These are the data that Splunk indexes and makes searchable, such as the `rawdata` and the `tsidx` files. These data are not part of the Splunk diag file, as they may contain sensitive or confidential information. For more information, see [Generate a diagnostic snapshot of your Splunk Enterprise deployment](#) in the Splunk documentation.

NEW QUESTION # 26

To reduce the captain's work load in a search head cluster, what setting will prevent scheduled searches from running on the captain?

- A. **captain_is_adhoc_searchhead = true(on the current captain)**
- B. `adhoc_searchhead = true`(on the current captain)
- C. `adhoc_searchhead = true`(on all members)
- D. `captain_is_adhoc_searchhead = true`(on all members)

Answer: A

Explanation:

Explanation/Reference: <https://docs.splunk.com/Documentation/Splunk/7.3.1/DistSearch/Adhocclustermember>

NEW QUESTION # 27

When troubleshooting monitor inputs, which command checks the status of the tailed files?

`splunk cmd btool inputs list | tail`

- A. `curl https://serverhost:8089/services/admin/inputstatus/`
- B. **TailingProcessor:FileStatus**
`curl https://serverhost:8089/services/admin/inputstatus/`
- C. `splunk cmd btool check inputs layer`
- D. `TailingProcessor:Tailstatus`

Answer: B

Explanation:

Explanation/Reference: https://docs.splunk.com/Documentation/Splunk/7.3.1/Data/Troubleshoottheinputprocess#Troubleshoot_your_tailed_files
