HP Aruba Certified Network Security Professional - HPE7-A02 Free Exam Questions

QUESTION NO: 1
A company uses HPE Aruba Networking ClearPass Policy Manager (CPPM) as a TACACS+ server to authenticate managers on its AOS-CX switches. You want to assign managers to groups on the AOS-CX switch by name. How do you configure this setting in a CPPM TACACS+ enforcement profile?

- A. Add the Shell service and set autoadd to the group name.
- B. Add the Shell service and set priv lvl to the group name.
- C. Add the Aruba Common service and set Aruba-Admin-Role to the group name.
- D. Add the Aruba Common service and set Aruba-Priv-Admin-User to the group name.

Hide answer/explanation Discussion 0

Correct Answer: C [Vote an answer](#)

To assign managers to groups on the AOS-CX switch by name using HPE Aruba Networking ClearPass Policy Manager (CPPM) as a TACACS+ server, you should add the Aruba service to the TACACS+ enforcement profile and set the Aruba-Admin-Role to the group name. This configuration ensures that the appropriate administrative roles are assigned to managers based on their group membership, allowing for role-based access control on the AOS-CX switches.

QUESTION NO: 2
You are using OpenSSL to obtain a certificate signed by a Certification Authority (CA). You have entered this command:
openssl req -new -out file1.pem -newkey rsa-3072 -keyout file2.pem
Enter PEM pass phrase: -----
Verifying - Enter PEM pass phrase: -----
Country Name (2 letter code) [AU]: US
State or Province Name (full name) (Some-State): California
Locality Name (eg, city) []: Sunnyvale
Organization Name (eg, company) [Internet Widgits Pty Ltd]: example.com
Organizational Unit Name (eg, section) []: Infrastructure
Common Name (e.g. server FQDN or YOUR name) []: radius.example.com
What is one guideline for continuing to obtain a certificate?

- A. You should use a third-party tool to encrypt file2.pem before sending it and file1.pem to the CA.
- B. You should concatenate file1.pem and file2.pem into a single file, and submit that to the desired CA to sign.
- C. You should submit file1.pem, but not file2.pem, to the desired CA to sign.
- D. You should submit file2.pem, but not file1.pem, to the desired CA to sign.

Hide answer/explanation Discussion 0

Correct Answer: C [Vote an answer](#)

When using OpenSSL to obtain a certificate signed by a Certification Authority (CA), you should submit the Certificate Signing Request (CSR) file, which is file1.pem, to the CA. The CSR contains the information about the entity requesting the certificate and the public key, but not the private key, which is in file2.pem. The CA uses the information in the CSR to create and sign the certificate.
1. CSR Submission: The CSR (file1.pem) includes the public key and the entity information required by the CA to issue a certificate.

P.S. Free 2026 HP HPE7-A02 dumps are available on Google Drive shared by DumpsTorrent: <https://drive.google.com/open?id=1QQiL4EwQiNKLzWJP9aYFZR19PmotgH7>

An Aruba Certified Network Security Professional Exam (HPE7-A02) practice questions is a helpful, proven strategy to crack the Aruba Certified Network Security Professional Exam (HPE7-A02) exam successfully. It helps candidates to know their weaknesses and overall performance. DumpsTorrent software has hundreds of Aruba Certified Network Security Professional Exam (HPE7-A02) exam dumps that are useful to practice in real-time. The Aruba Certified Network Security Professional Exam (HPE7-A02) practice questions have a close resemblance with the actual HPE7-A02 exam.

The pass rate is 98% for HPE7-A02 exam materials, you can pass your exam by using HPE7-A02 exam materials, otherwise we will give you a refund. In addition, HPE7-A02 learning materials have both quality and the quantity, and they will be enough for you to pass the exam. You can obtain the download link and password for HPE7-A02 Exam Braindumps within ten minutes, so that you can begin your preparation as early as possible. We have online and offline service, and if you have any questions for HPE7-A02 exam materials, you can consult us, and we will give you a reply as soon as possible.

>> **HPE7-A02 Associate Level Exam** <<

100% Pass-Rate HPE7-A02 Associate Level Exam – Pass HPE7-A02 First Attempt

Now there are many IT training institutions which can provide you with HP certification HPE7-A02 exam related training material,

but usually through these website examinees do not gain detailed material. Because the materials they provide are specialized for HP Certification HPE7-A02 Exam, so they didn't attract the examinee's attention.

HP HPE7-A02, also known as the Aruba Certified Network Security Professional (ACNSP) certification exam, is designed for IT professionals who want to demonstrate their expertise in network security using Aruba solutions. Aruba Certified Network Security Professional Exam certification is ideal for individuals who are responsible for designing, implementing, and managing secure wireless networks. By passing HPE7-A02 Exam, candidates can prove their ability to secure enterprise-level wireless networks, protect against advanced threats, and implement security policies.

HP Aruba Certified Network Security Professional Exam Sample Questions (Q125-Q130):

NEW QUESTION # 125

A company uses HPE Aruba Networking ClearPass Device Insight (CPDI) (the standalone application option). In the details for a generic device cluster, you see a recommendation for "Windows 8/10" with 70% accuracy.

What does this mean?

- A. CPDI has grouped this cluster with similar classified devices. 70% of those classified devices are "Windows 8/10."
- **B. CPDI has detected that these devices match about 70% of the system rule for defining "Windows 8/10" devices.**
- C. CPDI has matched these devices against several, conflicting system rules. 70% of those rules are for "Windows 8/10" devices.
- D. CPDI has used MAC OUI to group these devices together. The average device's MAC address matches 70% of the "Windows 8/10" OUI.

Answer: B

Explanation:

When HPE Aruba Networking ClearPass Device Insight (CPDI) shows a recommendation for "Windows 8/10" with 70% accuracy for a generic device cluster, it means that CPDI has detected that these devices match about 70% of the system rule criteria for defining "Windows 8/10" devices. This percentage indicates the confidence level based on the observed characteristics and behavior of the devices, helping administrators understand the likelihood that these devices are indeed running Windows 8 or 10.

NEW QUESTION # 126

A company needs you to integrate HPE Aruba Networking ClearPass Policy Manager (CPPM) with HPE Aruba Networking ClearPass Device Insight (CPDI).

What is one task you should do to prepare?

- A. Install the root CA for CPPM's HTTPS certificate as trusted in the CPDI application.
- B. Collect a Data Collector token from HPE Aruba Networking Central.
- **C. Enable Insight in the CPPM server configuration settings.**
- D. Configure WMI, SSH, and SNMP external accounts for device scanning on CPPM.

Answer: C

Explanation:

To integrate HPE Aruba Networking ClearPass Policy Manager (CPPM) with HPE Aruba Networking ClearPass Device Insight (CPDI), one of the necessary tasks is to enable Insight in the CPPM server configuration settings. This configuration allows CPPM to communicate and share data with CPDI, facilitating the integration and enabling enhanced device profiling and policy enforcement capabilities.

1. **Insight Enablement:** Enabling Insight on the CPPM server allows it to leverage the data and capabilities of CPDI, integrating device profiling information into policy decisions.
2. **Data Sharing:** This integration ensures that CPPM can receive and use detailed device information from CPDI to make more informed policy enforcement decisions.
3. **Configuration:** Properly configuring the server settings to enable Insight ensures seamless communication and data flow between CPPM and CPDI.

Reference: Aruba ClearPass integration guides provide detailed instructions on enabling Insight and configuring the necessary settings for effective integration between CPPM and CPDI.

NEW QUESTION # 127

As part of setting up an HPE Aruba Networking ClearPass Onboard solution for wireless clients, you created Network Settings, a Configuration Profile, and a Provisioning Settings object in ClearPass Onboard. You also ran the ClearPass Onboard Service Only Template on ClearPass Policy Manager (CPPM).

You now need to ensure that only domain users are authenticated and allowed to log into the ClearPass Onboard portal. Which component should you edit?

- A. The Network Settings on ClearPass Onboard
- B. The Provisioning profile on ClearPass Onboard
- C. The ClearPass Onboard Service Pre-Auth service on CPPM
- D. The 802.1X services on CPPM used for wireless clients

Answer: C

Explanation:

Access to the Onboard portal is controlled by a dedicated Pre-Auth service in ClearPass Policy Manager:

* The "ClearPass Onboard Service Pre-Auth" service defines which authentication sources (e.g., AD domain, local DB, guest) are used when users log into the Onboard web portal.

* To restrict access to domain users only, you edit this Pre-Auth service to use only the Active Directory auth source (and appropriate authorization checks, such as group membership).

Exam and configuration references for ClearPass Onboard clearly identify the Onboard Pre-Auth service as the place where you control who can log into the Onboard portal.

* Network Settings and Provisioning profiles in Onboard govern SSID, profiles, and device configuration, not portal user authentication.

* The 802.1X services for wireless control network access after onboarding, not login to the onboarding portal itself.

Therefore, to limit the portal to domain users, you should edit the ClearPass Onboard Service Pre-Auth service on CPPM # Option B.

NEW QUESTION # 128

A security team needs to track a device's communication patterns and identify patterns such as how many destinations the device is accessing.

Which Aruba solution can show this information at a glance?

- A. AOS-CX Analytics Dashboard using the system-installed NAE agent
- B. HPE Aruba Networking ClearPass Policy Manager (CPPM) live monitoring Access Tracker
- C. HPE Aruba Networking ClearPass Insight Endpoints and Network Dashboards
- D. HPE Aruba Networking ClearPass Device Insight (CPDI) under a device's network activity

Answer: D

Explanation:

HPE Aruba Networking ClearPass Device Insight (CPDI) can show detailed information about a device's communication patterns, including how many destinations the device is accessing. CPDI provides comprehensive visibility into the behavior and activity of devices on the network, allowing the security team to track and analyze communication patterns at a glance. This information is critical for identifying anomalies and potential security threats.

NEW QUESTION # 129

You have created this rule in an HPE Aruba Networking ClearPass Policy Manager (CPPM) service's enforcement policy:

```
IF Authorization [Endpoints Repository] Conflict EQUALS true
```

```
THEN apply "quarantine_profile"
```

What information can help you determine whether you need to configure cluster-wide profiler parameters to ignore some conflicts?

- A. Whether the company has rare Internet of Things (IoT) devices
- B. Whether some devices are running legacy operating systems
- C. Whether the company has devices that use PXE boot
- D. Whether some devices are incapable of captive portal or 802.1X authentication

Answer: C

Explanation:

A conflict in the Endpoints Repository usually indicates that ClearPass has seen different profiling data for the same MAC, which might mean a spoofing attempt-or simply normal behavior for certain device types.

Devices that use PXE boot often:

* Boot initially from the network with one set of characteristics (e.g., a minimal OS, different DHCP fingerprint),

* Then chain-load into a different OS with a different fingerprint and sometimes even a different network profile.

Aruba exam and design material specifically point out PXE boot as a common, benign cause of profiler conflicts and recommend tuning cluster-wide profiler parameters to ignore or relax some conflicts for these devices.

Therefore, you look at whether the company has devices that use PXE boot when deciding whether to tune profiler conflict behavior # Option D.

NEW QUESTION # 130

.....

If you want to learn HPE7-A02 practice guide anytime, anywhere, then we can tell you that you can use our products on a variety of devices. If you are convenient, you can choose to study on the computer. If you live in an environment without a computer, you can read HPE7-A02 simulating exam on your mobile phone. Of course, the premise is that you have already downloaded the APP version of HPE7-A02 Study Materials. If you don't have an electronic product around you, or you don't have a network, you can use a printed PDF version of HPE7-A02 training materials.
