質問 # 15

What are some benefits of AI agents? Note: There are 3 correct answers to this question.

- A. Replace managers
- B. Facilitate collaboration
- C. Boost productivity
- D. Reduce costs

正解: B、C、D

解説:

AI agents, as described in SAP Business AI documentation, offer significant benefits to organizations. Facilitate collaboration by enabling seamless interaction between business functions, such as integrating procurement and finance processes. Boost productivity by automating repetitive tasks and providing actionable insights, allowing employees to focus on strategic activities. Reduce costs through efficient resource utilization and streamlined workflows, minimizing manual effort and operational expenses. While AI agents enhance decision-making, they do not replace managers, as their role is to augment human capabilities rather than supplant leadership. Ensuring privacy is a safeguard but not a primary benefit highlighted in the documentation. These benefits align with SAP's goal of delivering intelligent, cost-effective solutions.

質問 # 16

Which of the following factors are part of SAP's commitment to building and operating AI responsibly? Note: There are 3 correct answers to this question.

- A. Pervasive use of agile agentic AI
- **B. Optimized AI model sizes and routing**
- C. Clean core-compliant extensions and process design
- **D. SAP data centers that are powered by renewable electricity only**
- **E. Ethical AI governance**

正解: B、D、E

質問 # 17

(What are some generative AI tools for an SAP Cloud ERP transformation? Note: There are 3 correct answers to this question.)

- **A. ABAP Business Object generator**
- **B. Process model generator**
- C. Extension builder wizard
- D. Integration generator
- **E. Process automation**

正解: A、B、E

解説:

Comprehensive and Detailed Explanation From Exact Extract: Generative AI tools for SAP Cloud ERP transformation include process automation capabilities in SAP Build Process Automation for generating and automating business processes, the process model generator in SAP Signavio for creating process models using AI, and the ABAP Business Object generator in Joule for developing ABAP-based business objects to extend ERP functionalities. These tools facilitate efficient migration, customization, and optimization during cloud ERP transformations by leveraging generative AI to streamline code, processes, and extensions.

Exact extracts supporting this:

Process automation: "SAP Build Process Automation integrates with generative AI to generate and edit business processes, decisions, forms, and script tasks using natural language descriptions."sap.com This supports automation in ERP transformations.

Process model generator: "SAP Signavio uses generative AI to assist in process modeling, recommending performance indicators and generating models based on best practices."learning.sap.com

ABAP Business Object generator: "Joule generates ABAP business objects using the ABAP RESTful Application Programming Model (RAP) for extensions in SAP S/4HANA Cloud."learning.sap.com

"Generative AI in ABAP Cloud includes business object generation."community.sap.com Other options are incorrect because:

Option B: While extension building is simplified with wizards in SAP Build Code, it is not specifically a "generative AI tool" but rather a guided process; generative aspects come from Joule integration.

Option C: Integration generation is supported in SAP BTP, but not highlighted as a distinct generative AI tool for ERP transformation; focus is on code and process generation.

Reference from Positioning SAP Business AI Solutions as part of SAP Business Suite documents or Study Guide: Derived from SAP Learning Journey "Boosting Your Cloud Transformation Journey with SAP Business AI and Generative AI," units on generative AI in SAP Signavio, Build Process Automation, and ABAP Cloud. Supported by SAP Community blogs on generative AI for S/4HANA migration and SAP Help Portal, aligning with C_BCBAI_2502 certification for tools in cloud ERP transformations.

質問 # 18

(What are the main categories of using AI in Cloud ERP? Note: There are 2 correct answers to this question.)

- A. Process knowledge
- B. Productivity and efficiency
- C. Process-related decision optimization
- D. Profitability optimization

正解: B、C

解説:

Comprehensive and Detailed Explanation From Exact Extract: The main categories of using AI in Cloud ERP are productivity and efficiency, which focus on automating tasks and streamlining workflows, and process-related decision optimization, which involves leveraging AI for better decision-making and outcome predictions in business processes.

Exact extracts supporting this:

"Challenges and benefits of Artificial Intelligence in Cloud ERP can be divided into two main categories: Process-related decision optimization; Productivity and efficiency."learning.sap.com

"These can be divided into two main categories: Process-related decision optimization."learning.sap.com (Implying the second as productivity and efficiency from context.) Other options are incorrect because:

Option C: Process knowledge is not identified as a main category; AI embeds knowledge but categories focus on optimization and efficiency.

Option D: Profitability optimization is a potential outcome but not a primary category; emphasis is on decision and productivity aspects.

Reference from Positioning SAP Business AI Solutions as part of SAP Business Suite documents or Study Guide: From the SAP Learning course "Positioning SAP Business AI," unit "Summarizing Key Solutions of Business AI," and "Understanding SAP Business AI for SAP S/4HANA Cloud," which categorize AI usage in Cloud ERP as decision optimization and productivity/efficiency, supporting positioning within the SAP Business Suite per C_BCBAI_2502 materials.
