Oracle Fusion Cloud Applications SCM Foundations Associate - Rel 1 Sample Questions (Q19-Q24):

NEW QUESTION # 19
What is the primary purpose of the Supply Chain Orchestration process in Oracle Fusion Cloud SCM?

- A. It eliminates the need for supplier collaboration.
- B. It automates the execution of supply chain tasks across different applications.
- C. It only manages warehouse operations without linking to procurement or manufacturing.
- D. It provides a manual approach to tracking supply chain transactions.

Answer: B

Explanation:
The Supply Chain Orchestration process (C) in Oracle Fusion Cloud SCM automates the execution of supply chain tasks across applications like procurement, manufacturing, and inventory management. It coordinates activities-e.g., triggering a PO when inventory is low or scheduling production after an order-ensuring seamless integration. Option A is false-supplier collaboration is often required. Option B is incorrect-it links all supply chain areas, not just warehouses. Option D is wrong-automation replaces manual tracking. For example, if a customer order requires 200 units, Orchestration aligns procurement and production automatically, reducing delays and errors, and enhancing end-to-end visibility.

NEW QUESTION # 20
Which function does the Global Order Promising component serve in Oracle Fusion Cloud SCM?

- A. It guarantees order fulfillment within 24 hours.
- B. It provides real-time order promising based on supply and demand constraints.
- C. It focuses only on local supplier availability.

Answer: B

Explanation:
Global Order Promising (GOP) in Oracle Fusion Cloud SCM provides real-time order promising by evaluating supply and demand constraints across the enterprise, ensuring accurate delivery commitments. Option A is incorrect as GOP considers global, not just local, availability. Option C is false-it doesn't guarantee a 24-hour fulfillment but provides feasible timelines. This enhances customer satisfaction and planning accuracy.

NEW QUESTION # 21
What is the role of the Global Order Promising feature in Oracle Fusion Cloud SCM?

- A. It eliminates the need for supplier collaboration.
- B. It focuses only on local inventory availability.
- C. It guarantees same-day delivery for all orders.
- D. It provides real-time order commitment dates based on supply and demand constraints.

Answer: D

Explanation:
Global Order Promising (C) provides real-time order commitment dates by analyzing supply (e.g., inventory, production) and demand (e.g., orders, forecasts) constraints enterprise-wide. For instance, if 100 units are requested and 70 are available with a 3-day lead time, it commits to 3 days. Option A is false-no universal same-day guarantee exists. Option B is incorrect-supplier data often informs promises. Option D is wrong-it considers global, not just local, availability. This feature ensures reliable promises,

reduces cancellations, and aligns customer expectations with operational capacity.

NEW QUESTION # 22
Which metric is used to measure the effectiveness of the Demand to Management OMBP?

- A. Supplier Lead Time.
- B. Inventory Turnover.
- C. Customer Acquisition Cost.
- D. Forecast Accuracy.

Answer: D

Explanation:
Forecast Accuracy (C) measures the effectiveness of the Demand to Management OMBP by comparing predicted demand to actual demand, reflecting how well the process anticipates market needs. For example, if a forecast predicts 1,000 units and actual sales are 950, accuracy is 95%, indicating strong performance. Option A (Customer Acquisition Cost) is a marketing metric, unrelated to demand planning. Option B (Supplier Lead Time) assesses supplier performance, not forecasting. Option D (Inventory Turnover) measures stock movement, an outcome influenced by forecasting, not a direct metric. Accurate forecasts drive efficient inventory and production planning, reducing costs (e.g., avoiding $10,000 in overstock) and ensuring customer satisfaction.

NEW QUESTION # 23
What is a primary function of Cost Accounting in Oracle Fusion Cloud SCM?

- A. It prevents any fluctuations in material costs.
- B. It tracks and analyzes manufacturing costs to support financial reporting and decision-making.
- C. It records only customer payments, excluding supplier invoices.

Answer: B

Explanation:
Cost Accounting in Oracle Fusion Cloud SCM is designed to track and analyze costs associated with manufacturing processes, including material, labor, and overhead expenses. This function supports financial reporting by providing detailed cost data and aids decision-making by offering insights into cost drivers and profitability. Option A is incorrect because cost accounting does not prevent fluctuations-it records and manages them. Option B is wrong as it encompasses supplier-related costs, not just customer payments. By maintaining accurate cost records, this module ensures compliance with accounting standards and enables strategic cost management.
