

Pass Guaranteed Quiz 2026 VMware 2V0-15.25: VMware Cloud Foundation 9.0 Support–Reliable Latest Exam Notes

Everyone wants to have a good job and decent income. But if they don't have excellent abilities and good major knowledge they are hard to find a decent job. Passing the test 2V0-15.25 certification can make you realize your dream and find a satisfied job. Our study materials are a good tool that can help you pass the exam easily. You will feel convenient if you buy our product not only because our 2V0-15.25 Exam Prep is of high pass rate but also our service is also perfect. What's more, our update can provide the latest and most useful 2V0-15.25 exam guide to you, in order to help you learn more and master more.

There is no denying the fact that everyone in the world wants to find a better job to improve the quality of life. Generally speaking, these jobs are offered only by some well-known companies. In order to enter these famous companies, we must try our best to get some certificates as proof of our ability such as the 2V0-15.25 Certification. And our 2V0-15.25 exam questions are the exactly tool to help you get the 2V0-15.25 certification. Just buy our 2V0-15.25 study materials, then you will win it.

Exam 2V0-15.25 Reference | Valid Test 2V0-15.25 Fee

Before clients purchase our 2V0-15.25 test torrent they can download and try out our product freely to see if it is worthy to buy our 2V0-15.25 exam questions. You can visit the pages of our 2V0-15.25 training guide on the website which provides the demo of our 2V0-15.25 study torrent and you can see parts of the titles and the form of our software. IF you have any question about our 2V0-15.25 Exam Questions, there are the methods to contact us, the evaluations of the client on our 2V0-15.25 practice guide, the related exams and other information about our 2V0-15.25 test torrent.

VMware 2V0-15.25 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">IT Architectures, Technologies, Standards: This domain covers fundamental frameworks, tools, and best practices for building scalable, secure, and interoperable enterprise IT systems.
Topic 2	<ul style="list-style-type: none">Install, Configure, Administrate the VMware by Broadcom Solution: This area covers installing, configuring, and managing VMware solutions including VCF Fleet deployment, expansion, and reduction operations.
Topic 3	<ul style="list-style-type: none">Plan and Design the VMware by Broadcom Solution: This domain addresses architectural planning and design principles for creating scalable, secure virtual environments aligned with business requirements.

Topic 4	<ul style="list-style-type: none"> VMware by Broadcom Solution: This section focuses on understanding VMware by Broadcom's virtualization and cloud infrastructure platform for managing modern enterprise workloads.
Topic 5	<ul style="list-style-type: none"> Troubleshoot and Optimize the VMware by Broadcom Solution: This domain focuses on troubleshooting VCF deployment, upgrades, conversions, workload domains, fleet operations (certificates, passwords, identity), licensing, compute resources, storage (vSAN, supplemental storage), networking (VDS, NSX), VCF Operations tools, Identity Broker automation, and HCX workload migrations.

VMware Cloud Foundation 9.0 Support Sample Questions (Q38-Q43):

NEW QUESTION # 38

An administrator has been tasked with deploying a new workload domain consisting of six VMware ESX hosts with VMware vSAN into an existing VMware Cloud Foundation (VCF) instance. After starting the deployment from VCF Operations, they discover that only four of the six hosts required are listed for selection in the UI. The administrator checks the Unassigned Host Inventory view in the vSphere Client and confirms that all six hosts are listed.

Which step should the administrator perform to identify why the two hosts are not available for selection?

- A. Check that all disk partitions have been deleted from the SSD drives of the hosts.
- B. Check that the network pool the hosts have been associated with is enabled for vSAN.**
- C. Check that the management port group on the standard switch has been enabled for vSAN traffic.
- D. Check that the failures to tolerate (FTT) setting for the workload domain is set to 0.

Answer: B

Explanation:

When deploying a new workload domain in VMware Cloud Foundation (VCF), only ESXi hosts that fully meet all pre-requisites are displayed in the VCF Operations UI for selection. Although all six hosts appear in the Unassigned Host Inventory in vCenter, VCF performs additional validation before making them selectable for workload domain deployment.

One of the mandatory requirements for any vSAN-enabled workload domain is that the ESXi hosts must be associated with a Network Pool configured for vSAN traffic. A network pool defines the host network configuration (VLANs, MTU, NIC mapping) used during domain deployment.

If the two missing hosts are associated with a network pool that does not have vSAN traffic enabled, or are associated with no network pool at all, VCF will exclude them from the workload domain deployment wizard.

This is documented behavior: VCF filters out hosts when required network intents—such as vSAN—are not present.

Other options are incorrect:

- * A. Management port group enabled for vSAN traffic- vSAN should never run on the management PG.
- * B. FTT setting- Has no effect on host visibility; applies only after deployment.
- * C. Disk partitions- Affects vSAN disk claim but does not prevent host selection in VCF.

NEW QUESTION # 39

An administrator is tasked with replacing a VMware vCenter certificate in VMware Cloud Foundation (VCF) Operations with an external CA-signed certificate. The certificate import completes successfully but when running the certificate replacement task, it fails with the following error: Certificate replacement has failed...

The Certificate Chain validation failed due to 'Signature does not match' What is the possible cause of this issue?

- A. The Certificate Signing Request (CSR) included the IP address of the vCenter.
- B. The external CA is not accessible to VCF Operations.
- C. The external CA is not trusted by VCF Operations.
- D. The server certificate was copied to the wrong field.**

Answer: D

Explanation:

When replacing certificates in VMware Cloud Foundation (VCF) Operations, the system performs strict certificate chain validation. The error shown:

"Certificate chain validation failed due to 'Signature does not match'" indicates that VCF Operations attempted to validate the presented certificate chain but detected that the server certificate did not correctly match the signing CA certificate. This occurs most commonly when the administrator pastes the server certificate and CA root/intermediate certificates into the wrong fields during

import.

VCF requires the certificate bundle to be uploaded in the correct format:

* Server certificate# Server Certificate field

* Intermediate certificates# Intermediate Chain field

* Root certificate# Root CA field

If the chain order is wrong or the server certificate is mistakenly placed in an intermediate or root CA field, the cryptographic signature validation fails. This exact failure mode is documented in VMware certificate replacement workflows.

Option A is incorrect because including an IP address in a CSR does not invalidate chain signatures.

Option B is incorrect because an untrusted CA produces a trust failure, not a signature mismatch.

Option C is unrelated: accessibility is not required for certificate validation.

NEW QUESTION # 40

An administrator is responsible for managing a VMware Cloud Foundation (VCF) fleet. The following information has been provided about the VCF fleet configuration:

* The VCF fleet consists of a single VCF instance with a single management domain and a single workload domain.

* VCF Automation has a single Organization for VM Apps configured with a VCF Cloud Account for the workload domain.

The administrator has been tasked with creating a new Organization for All Apps to support the developers need to deploy Kubernetes-based applications in a new region in a workload domain.

The administrator attempts to create a new region through the VCF Automation Provider Portal but the VMware NSX manager for the workload domain does not appear on the list of available NSX managers.

What action must the administrator complete to resolve the issue?

- A. Trigger an inventory synch in VCF Operations fleet management.
- B. Deploy an additional VCF workload domain cluster.
- C. Add the SDDC Manager integration for the VCF instance.
- D. Deploy a new VCF workload domain.

Answer: C

NEW QUESTION # 41

An administrator is troubleshooting a problem with NSX.

Which command can be used to validate installed NSX VIBs on the ESX host?

- A. nsxcli get version
- B. esxcli software vib list
- C. esxcfg software list
- D. esxtop -b -d 2 -n 100

Answer: B

Explanation:

When troubleshooting NSX on an ESXi host, VMware requires verification that NSX VIBs (vSphere Installation Bundles) are installed and in the correct state. VIBs are responsible for NSX datapath, control- plane modules, and kernel extensions on ESXi.

The authoritative and documented method to list VIBs on an ESXi host is the command:

esxcli software vib list

This command displays all installed kernel modules, version numbers, NSX packages, and their installation status. For NSX-T (now part of VCF networking), administrators expect to see VIBs such as nsx-agg-service, nsx-bridge, nsx-esx-datapath, and others. If any required NSX VIBs are missing or inconsistent, the ESXi host will fail to join NSX transport nodes or will show "Not Ready."

Option A (esxtop) is for performance monitoring and does not show VIB information.

Option C (nsxcli get version) checks NSX version on Edge Nodes or host transport nodes but does not list VIBs.

Option D (esxcfg software list) is an outdated and invalid command.

NEW QUESTION # 42

An administrator has identified that the VMware NSX Admin account is locked out. The administrator is unable to login to the NSX Manager UI using this account.

How could the administrator resolve this issue?

- A. SSH into NSX Manager as Admin and remove API and CLI password lockouts.
- **B. Console into NSX Manager as root and clear API and CLI password lockouts.**
- C. Login into vCenter and increasing the password age policy.
- D. Login to SDDC Manager and rotate admin account password.

Answer: B

Explanation:

When an NSX Admin account becomes locked in NSX Manager, this occurs due to failed login attempts exceeding the lockout threshold for either:

- * CLI access,
- * API access, or
- * UI login, which is tied to API authentication.

Once locked, the only supported method to recover the NSX admin account is to log in to the NSX Manager console as the root user and manually clear the lockout counters. This is documented in NSX Manager password-recovery procedures and is the standard administrative recovery action.

The root console provides access to:

clear account-lockout admin

or the equivalent reset methods within NSX Manager.

Why the other options are incorrect:

- * A. SSH into NSX Manager as Admin Impossible - the admin account is locked and cannot be used to SSH.
- * B. Change password age policy in vCenter NSX Manager accounts are not governed by vCenter password policy.
- * C. Rotate admin password in SDDC Manager SDDC Manager rotates NSX passwords when unlocked; it cannot unlock a locked account.

NEW QUESTION # 43

.....

By selecting our 2V0-15.25 study materials, you do not need to purchase any other products. Our passing rate may be the most attractive factor for you. Our 2V0-15.25 learning guide have a 99% pass rate. This shows what? As long as you use our products, you can pass the exam! Do you want to be one of 99? Quickly purchase our 2V0-15.25 Exam Questions! And you will find that the coming exam is just a piece of cake in front of you.
