NEW QUESTION # 391

An office manager is ordering new cables for the company's printers and scanners, which require USB-B connections. Which USB version should the manager ensure the USB-B cables support to achieve the best performance for these devices?

- A. USB 2.0
- B. USB 3.0
- C. USB-C
- D. USB 1.1

Answer: A

Explanation:

Correct Answer. B. USB 2.0 USB 2.0 is the most appropriate choice for printers and scanners that utilize USB-B connectors, as it offers a balance of compatibility and performance with data transfer speeds sufficient for typical printing and scanning tasks. Option A is incorrect because USB 1.1 provides significantly slower data transfer rates, which may not support the efficient functioning of modern printers and scanners. Option C is incorrect because although USB 3.0 offers higher data transfer speeds, USB-B connectors are rarely configured to support this standard; most printer and scanner devices do not require nor utilize USB 3.0 speeds. Option D is incorrect because USB-C refers to the connector shape and interface standard, which is different from USB-B and generally not compatible without adapters.

NEW QUESTION # 392

An administrator detects an IP address that has repeatedly attempted to access several employee accounts. What is the most effective action to take?

- A. Send a warning email to the IP address owner
- B. Monitor the IP address for future activities
- C. Block the IP address from accessing the network
- D. Increase the network bandwidth to handle more login attempts

Answer: C

Explanation:

Correct Answer. B. Block the IP address from accessing the network Blocking an IP address that has been identified as a source of repeated unauthorized attempts is an effective way to prevent potential breaches.

Option A is incorrect because monitoring alone does not prevent further attempts.

Option C is incorrect because contacting the IP owner is not guaranteed to stop the attempts and may not reach the actual perpetrator.

Option D is incorrect as increasing bandwidth does not address the security risk posed by unauthorized attempts.

NEW QUESTION # 393

You resolve a customer's printing issue. How should you document the incident?

- A. Printing issue is resolved. Reinstalled printer drivers and rebooted computer.
- B. Printer is now printing. Issue is resolved and customer is happy.
- C. This customer was using the wrong printer and did not know which printer they should use.
- D. Ticket Complete.

Answer: A

Explanation:

This option provides a clear, professional, and specific summary of the issue resolution, including what actions were taken (reinstalled printer drivers and rebooted computer). This is important for future reference and for maintaining a proper IT knowledge base.

NEW QUESTION # 394

After successfully resolving an intermittent network connectivity issue by adjusting the DHCP settings, what is the most critical next step for the IT support technician?
