

실제HPE7-J02시험덤프자료, HPE7-J02시험대비공부, 최신HPE7-J02덤프자료

BONUS!!! Itexamdump HPE7-J02 시험 문제집 전체 버전을 무료로 다운로드하세요: <https://drive.google.com/open?id=1jwJ5ZLyQwiDQHd0nrKCD4JMEgxKaGPcw>

만약Itexamdump를 선택하였다면 여러분은 반은 성공한 것입니다. 여러분은 아주 빠르게 안전하게 또 쉽게HP HPE7-J02인증시험 자격증을 취득하실 수 있습니다. 우리Itexamdump에서 제공되는 모든 덤프들은 모두 100%보장도를 자랑하며 그리고 우리는 일년무료 업데이트를 제공합니다.

HP HPE7-J02 시험요강:

주제	소개
주제 1	<ul style="list-style-type: none"> • HPE Storage Portfolio and Strategy: This domain measures the knowledge of Solution Advisors in positioning HPE’s Storage portfolio within enterprise infrastructure. Candidates must understand HPE Storage hardware, procurement options, available tools, and the overarching storage strategy, including its relevance to enterprise-scale solutions.
주제 2	<ul style="list-style-type: none"> • Competitive Positioning of HPE Storage: This part of the exam focuses on the ability of Trusted Advisors to identify competitive opportunities for HPE Storage solutions. It requires articulating HPE’s strengths in comparison to multi-vendor environments, customer needs, and market trends, helping customers make informed technology choices.
주제 3	<ul style="list-style-type: none"> • Storage Access and Data Protection: This part of the exam tests the expertise of Infrastructure Engineers in configuring storage access, provisioning capacity, and applying replication policies. It also covers disaster recovery validation and role-based access control to secure storage operations.
주제 4	<ul style="list-style-type: none"> • Planning and Validating Storage Solutions: This section assesses the role of Storage Consultants in evaluating complex, multi-vendor environments. Candidates will demonstrate their ability to plan, size, and validate storage solutions tailored for enterprise workloads, ensuring proposals meet customer requirements effectively.
주제 5	<ul style="list-style-type: none"> • Advanced Troubleshooting and Prevention: This section focuses on the ability of Support Engineers to identify root causes of issues and implement advanced preventive measures. It emphasizes building resilience in customer environments to minimize future disruptions.

HPE7-J02최신덤프 - HPE7-J02최신버전 시험공부자료

HP HPE7-J02인증 시험은 전업적지식이 강한 인증입니다. IT업계에서 일자리를 찾고 계시다면 많은 회사에서는HP HPE7-J02있는지 없는지에 알고 싶어합니다. 만약HP HPE7-J02자격증이 있으시다면 여러분은 당연히 경쟁력향상입니다.

최신 HPE Storage Solutions HPE7-J02 무료샘플문제 (Q18-Q23):

질문 # 18

Refer to the exhibit.

Your customer had an unexpected failure of their current storage array, causing them to lose some of their critical data. As a result, they are looking for a storage array with a guarantee of 100% data availability to prevent this failure and loss in the future.

They need 80TB raw and two new 25GbE top-of-rack switches to connect to their environment.

They expect 5% annual growth.

Which correction should be made to the configuration in the exhibit to meet the customer's requirements?

- A. HPE GreenLake financial model
- B. Change to 25G networking
- C. Decrease to 20 × 3.84TB drives
- D. Add 2× Aruba 8325 switches

정답: B

설명:

Detailed Explanation:

Rationale for Correct Answer:

The exhibit shows the use of 32Gb FC HBAs and 100GbE switches (Aruba 100G). However, the customer specifically requires 25GbE top-of-rack switches. Therefore, the configuration needs to be corrected to 25GbE networking. The HPE Alletra MP B10000 guarantees 100% data availability SLA, so the primary correction is networking alignment, not drives or financial model.

Distractors:

B: Reducing drives reduces raw capacity below 80TB requirement.

C: GreenLake is a consumption model but not the technical correction required.

D: Aruba 8325 is a core switch option; customer only asked for ToR 25GbE.

Key Concept: Networking alignment with requirements.

Reference: HPE Alletra MP Ordering and Configuration Guide.

질문 # 19

Your customer is a regional bank with branches in two different cities. Each branch is run as an isolated independent business and IT manages their SANs as separate fabrics to limit the scope of any failure. They use B-Series Switches.

The customer has requested a disaster recovery option that will allow replication between the two sites without merging the fabrics.

Which SAN technology meets the requirements?

- A. FC-FC routing
- B. NPIV
- C. FCIP
- D. Fabric partitioning

정답: A

설명:

Detailed Explanation:

Rationale for Correct Answer:

FC-FC routing (also known as Fibre Channel Routing / LSANs on B-Series switches) allows replication between separate SAN fabrics without merging them. This supports disaster recovery scenarios while preserving fabric isolation, exactly matching the bank's requirement.

Distractors:

A: FCIP tunnels extend Fibre Channel over IP networks, but this typically merges SAN domains.

C: NPIV (N_Port ID Virtualization) allows multiple virtual WWNs per port, not cross-fabric replication.

D: Fabric partitioning is zoning and segmentation within a single fabric, not between independent fabrics.

Key Concept: FC-FC routing on Brocade (B-Series) for SAN isolation with replication.

Reference: HPE B-Series SAN Design Guide, Brocade FCR/LSAN Concepts.

질문 # 20

Which statement is correct when enabling port trunking (FC ISL / Ethernet link aggregation)?

- A. For optimal performance, no more than 100 meters of cable length difference is acceptable.
- B. Port Trunking is supported by default on every B-Series FC switch.
- C. The port speed of the trunk ports can be different based on the used switches in the ISL group.
- **D. Ports need to belong to the same port group of the switch.**

정답: D

설명:

Detailed Explanation:

Rationale for Correct Answer:

In B-Series (Brocade) SAN switches, trunking requires that all ports in a trunk group belong to the same port group (same ASIC) and run at the same speed. This ensures frame ordering and load balancing across ISLs.

Distractors:

A: Incorrect - cable length differences must be minimal, but not stated in meters like this.

C: Incorrect - speeds must match across all trunked ports.

D: Trunking requires a license on some Brocade models; not always enabled by default.

Key Concept: Port trunking requires same port group and same speed.

Reference: HPE B-Series SAN Switch Trunking Best Practices.

질문 # 21

Your customer has deployed an HPE Alletra MP B10000 array in its virtualized environment. Data protection follows 3-2-1 best practices, with snapshots on the array, Veeam v12 backups, and storage on an external HPE StoreOnce appliance. Despite this, a ransomware attack made data recovery impossible.

Your customer asks how to enhance data protection with immutability and application consistency.

What is a possible solution using HPE Virtual Lock technology?

- A. Enable Virtual Lock on the HPE Alletra storage array
- B. Enable Virtual Lock on the VMware datastores in VMware vCenter
- **C. Enable Virtual Lock on the HPE StoreOnce Catalyst stores**
- D. Enable Virtual Lock for each backup job inside Veeam v12

정답: C

설명:

Detailed Explanation:

Rationale for Correct Answer:

Option C is correct because HPE StoreOnce Virtual Lock technology provides immutability at the Catalyst store level, preventing backup data from being deleted or modified for a defined retention period.

This ensures ransomware or malicious actors cannot encrypt, alter, or delete the protected backups, aligning with modern data protection requirements for immutability and compliance. In integration with Veeam v12, backups stored on StoreOnce Catalyst stores can be locked, creating an additional immutability layer beyond application-consistent snapshots.

Analysis of Incorrect Options (Distractors):

A: Virtual Lock is not a Veeam feature. While Veeam v12 supports immutability on certain storage backends (object lock-enabled S3, hardened Linux repositories), HPE Virtual Lock is specific to StoreOnce Catalyst stores, not Veeam job settings.

B: VMware vCenter datastores do not have a native immutability feature. Snapshots in vCenter can be deleted or corrupted during ransomware events, making this option incorrect.

D: HPE Alletra arrays support application-consistent snapshots and replication, but they do not provide the immutability guarantee that StoreOnce Virtual Lock enforces. Array-level snapshots can still be deleted if admin credentials are compromised.

Key Concept:

This question targets knowledge of HPE StoreOnce Virtual Lock - a feature designed to enforce immutability on Catalyst backup stores, making backup data resistant to deletion or alteration during ransomware or insider attacks.

질문 # 22

You are sizing an HPE Alletra 5030. Unless otherwise indicated by the HPE sizer or the customer's requirements, HPE best practices state that you should default to which minimum FDR calculation?

- A. 23% of the largest drive size
- B. Below 12% for low-read latency
- C. Above 12% for low-read latency
- D. 23% of the smallest drive size

정답: A

설명:

Detailed Explanation:

Rationale for Correct Answer:

In Alletra 5000/6000 sizing, the Failure Domain Reserve (FDR) is used to account for rebuild overhead in case of drive failure. HPE best practices define that, unless otherwise directed by the sizing tool or customer requirements, the minimum FDR value should be set to 23% of the largest drive size. This ensures enough reserve capacity for fault tolerance and sustained performance during rebuilds.

Distractors:

B/C: Low-read latency is influenced by cache and workload profile, not by arbitrary FDR percentages.

D: Using the smallest drive is incorrect - rebuild impact must be sized against the largest drive.

Key Concept: FDR sizing based on 23% of largest drive = HPE best practice.

Reference: HPE Alletra 5000/6000 Sizing and Configuration Guide.

질문 # 23

.....

많은 사이트에서도 무료 HP HPE7-J02덤프데모를 제공합니다.우리도 마찬가지입니다.여러분은 그러한HP HPE7-J02데모들을 보시고 다시 우리의 덤프와 비교하시면 ,우리의 덤프는 다른 사이트덤프와 차원이 다른 덤프임을 아시릴것입니다, 우리Itexamdump에서 제공되는 덤프는 100%보장 도를 자랑하며,여러분은 시험패스로 인해 성공과 더 가까워 졌답니다
