

# New Release Cybersecurity-Practitioner PDF Questions [2026] - Palo Alto Networks Cybersecurity-Practitioner Exam Dumps

BTW, DOWNLOAD part of Actual4Exams Cybersecurity-Practitioner dumps from Cloud Storage: <https://drive.google.com/open?id=11TMMRWSKc70Ay3CmJDSCq2vpAiAjk5Sg>

Using these Palo Alto Networks Cybersecurity-Practitioner practice test software you will identify your mistakes, gain confidence and learn time-management skills. It will help you to prepare better for the final Cybersecurity-Practitioner exam. Actual4Exams Palo Alto Networks Cybersecurity-Practitioner Valid Dumps - Free Demo Download & Refund Guarantee Palo Alto Networks Cybersecurity-Practitioner exam dumps are the best option if you really want to pass the Palo Alto Networks Cybersecurity Practitioner exam on your first attempt.

Cybersecurity-Practitioner training materials have now provided thousands of online test papers for the majority of test takers to perform simulation exercises, helped tens of thousands of candidates pass the Cybersecurity-Practitioner exam, and got their own dream industry certificates Cybersecurity-Practitioner exam questions have an extensive coverage of test subjects and have a large volume of test questions, and an online update program. Cybersecurity-Practitioner Training Materials are not only the passbooks for students passing all kinds of professional examinations, but also the professional tools for students to review examinations. In the past few years, Cybersecurity-Practitioner exam torrent has received the trust of a large number of students and also helped a large number of students pass the exam smoothly.

## Top Cybersecurity-Practitioner Test Result | Professional Palo Alto Networks Exam Cybersecurity-Practitioner Format: Palo Alto Networks Cybersecurity Practitioner

The key trait of our product is that we keep pace with the changes of syllabus and the latest circumstance to revise and update our Cybersecurity-Practitioner study materials, and we are available for one-year free updating to assure you of the reliability of our service. Our company has established a long-term partnership with those who have purchased our Cybersecurity-Practitioner Exam guides. We have made all efforts to update our product in order to help you deal with any change, making you confidently take part in the exam.

## Palo Alto Networks Cybersecurity-Practitioner Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> <li>Secure Access: This domain examines SASE and SSE architectures, security challenges for data and applications including AI tools, and technologies like Secure Web Gateway, CASB, DLP, Remote Browser Isolation, SD-WAN, and Prisma SASE solutions.</li> </ul>
Topic 2	<ul style="list-style-type: none"> <li>Cybersecurity: This domain covers foundational security concepts including AAA framework, MITRE ATT&amp;CK techniques, Zero Trust principles, advanced persistent threats, and common security technologies like IAM, MFA, mobile device management, and secure email gateways.</li> </ul>
Topic 3	<ul style="list-style-type: none"> <li>Endpoint Security: This domain addresses endpoint protection including indicators of compromise, limitations of signature-based anti-malware, UEBA, EDR</li> <li>XDR, Behavioral Threat Prevention, endpoint security technologies like host firewalls and disk encryption, and Cortex XDR features.</li> </ul>
Topic 4	<ul style="list-style-type: none"> <li>Network Security: This domain addresses network protection through Zero Trust Network Access, firewalls, microsegmentation, and security technologies like IPS, URL filtering, DNS security, VPN, and SSL</li> <li>TLS decryption, plus OT</li> <li>IoT concerns, NGFW deployments, Cloud-Delivered Security Services, and Precision AI.</li> </ul>
Topic 5	<ul style="list-style-type: none"> <li>Cloud Security: This domain covers cloud architectures, security challenges across application security, cloud posture, and runtime security, protection technologies like CSPM and CWPP, Cloud Native Application Protection Platforms, and Cortex Cloud functionality.</li> </ul>

## Palo Alto Networks Cybersecurity Practitioner Sample Questions (Q68-Q73):

### NEW QUESTION # 68

Which subnet does the host 192.168.19.36/27 belong?

- A. 192.168.19.64
- B. 192.168.19.32
- C. 192.168.19.16
- D. 192.168.19.0

**Answer: C**

Explanation:

To find the subnet that the host 192.168.19.36/27 belongs to, we need to convert the IP address and the subnet mask to binary form and perform a logical AND operation. The /27 notation means that the subnet mask has 27 bits of ones and 5 bits of zeros. In decimal form, the subnet mask is 255.255.255.224. The binary form of the IP address and the subnet mask are:

IP address: 11000000.10101000.00010011.00100100 Subnet mask: 11111111.11111111.11111111.11100000 The logical AND operation gives us the network prefix:

Network prefix: 11000000.10101000.00010011.00100000

To get the subnet address, we convert the network prefix back to decimal form:

Subnet address: 192.168.19.32

The subnet address is the first address in the subnet range. To find the last address in the subnet range, we flip the bits of the subnet mask and perform a logical OR operation with the network prefix:

Flipped subnet mask: 00000000.00000000.00000000.00011111 Logical OR: 11000000.10101000.00010011.00111111 The last address in the subnet range is:

Last address: 192.168.19.63

The subnet range is from 192.168.19.32 to 192.168.19.63. The host 192.168.19.36 belongs to this subnet. Therefore, the correct answer is B. 192.168.19.16, which is the second address in the subnet range.

### NEW QUESTION # 69

SecOps consists of interfaces, visibility, technology, and which other three elements? (Choose three.)

- A. Business
- B. Accessibility
- C. Understanding
- D. Processes
- E. People

**Answer: A,D,E**

Explanation:

The six pillars include:

1. Business (goals and outcomes)
2. People (who will perform the work)
3. Interfaces (external functions to help achieve goals)
4. Visibility (information needed to accomplish goals)
5. Technology (capabilities needed to provide visibility and enable people)
6. Processes (tactical steps required to execute on goals)

All elements must tie back to the business itself and the goals of the security operations

### NEW QUESTION # 70

Which of these ports is normally associated with HTTPS?

- A. 0
- B. 1
- C. 2
- D. 3

**Answer: B**

Explanation:

HTTPS is a protocol that encrypts and secures the communication between web browsers and servers. HTTPS uses SSL or TLS certificates to establish a secure connection and prevent unauthorized access or tampering of data. HTTPS typically uses port 443, which is the default port for HTTPS connections. Port 443 is different from port 80, which is the default port for HTTP connections. HTTP is an unencrypted and insecure protocol that can expose sensitive information or allow malicious attacks. Port 443 is also different from port 5050, which is a common port for some applications or services, such as Yahoo Messenger or SIP. Port 5050 is not associated with HTTPS and does not provide any encryption or security. Port 443 is also different from port 25, which is the default port for SMTP, the protocol used for sending and receiving emails. Port 25 is not associated with HTTPS and does not encrypt the email content or headers. Reference:

\* Can I use another port other than 443 for HTTPS/SSL communication?

### NEW QUESTION # 71

Which statement is true about advanced persistent threats?

- A. They typically attack only once.
- B. They lack the financial resources to fund their activities.
- C. They have the skills and resources to launch additional attacks.
- D. They use script kiddies to carry out their attacks.

**Answer: C**

Explanation:

An advanced persistent threat (APT) is a sophisticated, sustained cyberattack in which an intruder establishes an undetected presence in a network in order to steal sensitive data over a prolonged period of time. APTs are usually carried out by well-funded, experienced teams of cybercriminals that target high-value organizations, such as governments, military, or corporations. APTs have the skills and resources to launch additional attacks, as they often use advanced techniques to evade detection, move laterally within the network, and establish multiple entry points and backdoors. APTs are not interested in causing immediate damage or disruption, but rather in achieving long-term goals, such as espionage, sabotage, or theft of intellectual property. Therefore, option B is the correct answer among the given choices<sup>123</sup> Reference:

## NEW QUESTION # 72

Which native Windows application can be used to inspect actions taken at a specific time?

- A. Task Manager
- B. Task Scheduler
- C. Timeline inspector
- **D. Event Viewer**

**Answer: D**

Explanation:

Event Viewer is a native Windows application that can be used to inspect actions taken at a specific time. Event Viewer displays detailed information about significant events on your computer, such as application, security, system, and setup events. You can use Event Viewer to monitor and troubleshoot problems with your computer, such as hardware failures, software errors, security breaches, network issues, etc. Event Viewer allows you to filter, sort, and search events by various criteria, such as date and time, event level, event source, event ID, etc. You can also view the event properties, which provide more details about the event, such as the event description, user name, computer name, event data, etc. Event Viewer can help you identify the root cause of a problem, or provide evidence of a malicious activity, by inspecting the actions taken at a specific time on your computer.
