You can try free demos of CPMAI_v7 practice test and Cognitive Project Management in AI CPMAI v7 - Training & Certification Exam CPMAI_v7 PDF before buying to test their authenticity.

PMI Cognitive Project Management in AI CPMAI v7 - Training & Certification Exam Sample Questions (Q21-Q26):

NEW QUESTION # 21

You're creating an AI-enabled chatbot that is going to access user data. What areas related to data governance do you need to make sure you're addressing? (Select all that apply.)

- A. Privacy Risks
- B. Data Sharing challenges
- C. Data Quantity Issues
- D. Business Risks
- E. Change Management Issues
- F. Data Quality Issues
- G. Security Risks

Answer: A,B,F,G

Explanation:

Domain IV: Data for AI - Task 2: Implementing Data Governance and Management mandates establishing data stewardship, management plans, lineage, and master-data practices. Core governance concerns include how data is shared (A), ensuring user privacy (B), guarding against breaches (E), and maintaining high data quality (F). Quantity or change-management issues are operational rather than governance controls.

NEW QUESTION # 22

You're testing your model and it is overly sensitive to the fluctuations of data and having trouble generalizing. What type of problem is this?

- A. You have selected the wrong data
- B. You are overfitting the data
- C. You are underfitting the data
- D. You have selected the wrong algorithm

Answer: B

Explanation:

Overfitting occurs when a model learns not only the underlying patterns but also the noise in the training data, causing it to perform well on seen data but poorly on unseen data. The CPMAI Glossary defines overfitting as "a modeling error where a model learns the training data too well, including its noise, resulting in poor performance on new data."

NEW QUESTION # 23

In what way would you be using Generative AI if you used the results of the Generative AI solution to improve and accelerate your job?

- A. As an Augmented Intelligence system
- B. As a programmatic approach for automation
- C. Used for Hyperpersonalization
- D. As an autonomous system removing the human from the loop

Answer: A

Explanation:

The CPMAI Glossary defines Augmented Intelligence as "enhancing human abilities with AI," where AI outputs are leveraged by humans to improve decision-making or productivity. Using Generative AI to accelerate or improve your own work is precisely an Augmented Intelligence use case, distinct from full autonomy or simple automation.

NEW QUESTION # 24

Your organization has just rolled out a new image recognition system and is asking all employees to use it. It was trained using images from the ImageNet test set. After a few weeks, users are finding the results are not as expected and are asking for visibility into all the aspects of what went into building an AI system. What area of Trustworthy AI is being addressed here?

- A. Transparent AI
- B. Explainable AI
- C. Governed AI
- D. AI Systemic Transparency
- E. Responsible AI

Answer: A

Explanation:

In CPMAI's Trustworthy AI framework, Transparent AI focuses on providing clear documentation of data sources, modeling approaches, evaluation methods, and deployment plans so that stakeholders can audit and understand how the system was built. The users' request for "visibility into all aspects" of model development, training data, and test sets directly maps to the Required AI Transparency Considerations task early in the methodology .

NEW QUESTION # 25

Your team is looking for a short term ROI project and decides that an AI-enabled chatbot will be the project to start with. During Phase I of CPMAI you go through the AI Go/No Go decision chart and realize that you have not answered yes to all the business feasibility questions. You and the team have not determined a clear problem definition.

What's the best course of action with how to proceed?

- A. Cautiously move forward as planned. You do not need to answer yes to all the questions in the AI Go /No Go decision chart to start your project.
- B. Do not move forward and cancel the project altogether.
- C. Do not move forward until you can determine a clear problem definition.
- D. Move forward with the project as planned. The problem definition will become clear later on in the project.

Answer: C

Explanation:

In Phase I's AI Go/No Go task group, the Business Feasibility step mandates that every business-feasibility question-including a clear problem definition-must be answered "Go" before proceeding. If any critical feasibility criteria remain unanswered or "No Go," the project must pause and resolve those uncertainties rather than advance prematurely.

NEW QUESTION # 26

.....

If you search reliable exam collection materials on the internet and find us, actually you have found the best products for your CPMAI_v7 certification exams. We are famous for the high pass rate of our CPMAI_v7 exam materials, that's why many old customers trust us and choose us directly before they have CPMAI_v7 Exams to attend.
