

Latest Databricks-Certified-Data-Engineer-Associate Exam Labs | Databricks-Certified-Data-Engineer-Associate New Study Materials

P.S. Free & New Databricks-Certified-Data-Engineer-Associate dumps are available on Google Drive shared by TestkingPDF: https://drive.google.com/open?id=1r3KHXYo9BDMr9WWU4TAGd4UUzCUaJh_h

If you do not get a reply from our service, you can contact customer service again. The staff of Databricks-Certified-Data-Engineer-Associate study guide is professionally trained. They can solve any problems you encounter on the Databricks-Certified-Data-Engineer-Associate exam questions. Of course, their service attitude is definitely worthy of your praise. I believe that you are willing to chat with a friendly person. All of Databricks-Certified-Data-Engineer-Associate Learning Materials do this to allow you to solve problems in a pleasant atmosphere while enhancing your interest in learning.

The Databricks Certified Data Engineer Associate Exam (Databricks-Certified-Data-Engineer-Associate) practice tests have customizable time and Databricks Certified Data Engineer Associate Exam (Databricks-Certified-Data-Engineer-Associate) exam questions feature so that the students can set the time and Databricks Certified Data Engineer Associate Exam (Databricks-Certified-Data-Engineer-Associate) exam questions according to their needs. The Databricks Certified Data Engineer Associate Exam (Databricks-Certified-Data-Engineer-Associate) practice test questions are getting updated on the daily basis and there are also up to 1 year of free updates. Earning the Databricks Certified Data Engineer Associate Exam (Databricks-Certified-Data-Engineer-Associate) certification exam is the way to grow in the modern era with high-paying jobs.

Latest Databricks-Certified-Data-Engineer-Associate Exam Labs & 2026 Realistic Databricks Databricks Certified Data Engineer Associate Exam New Study Materials Pass Guaranteed Quiz

These questions will familiarize you with the Databricks-Certified-Data-Engineer-Associate exam format and the content that will be covered in the actual test. You will not get a passing score if you rely on outdated practice questions. TestkingPDF has assembled a brief yet concise study material that will aid you in acing the Databricks Certified Data Engineer Associate Exam (Databricks-Certified-Data-Engineer-Associate) exam on the first attempt. This prep material has been compiled under the expert guidance of 90,000 experienced Databricks professionals from around the globe.

Databricks Certified Data Engineer Associate Exam Sample Questions (Q120-Q125):

NEW QUESTION # 120

Which of the following benefits of using the Databricks Lakehouse Platform is provided by Delta Lake?

- A. The ability to distribute complex data operations
- B. The ability to collaborate in real time on a single notebook

- C. The ability to manipulate the same data using a variety of languages
- D. The ability to set up alerts for query failures
- E. The ability to support batch and streaming workloads

Answer: E

Explanation:

Delta Lake is the optimized storage layer that provides the foundation for storing data and tables in the Databricks lakehouse. Delta Lake is fully compatible with Apache Spark APIs, and was developed for tight integration with Structured Streaming, allowing you to easily use a single copy of data for both batch and streaming operations and providing incremental processing at scale¹. Delta Lake supports upserts using the merge operation, which enables you to efficiently update existing data or insert new data into your Delta tables². Delta Lake also provides time travel capabilities, which allow you to query previous versions of your data or roll back to a specific point in time³. References: 1: What is Delta Lake? | Databricks on AWS 2: Upsert into a table using merge | Databricks on AWS 3: [Query an older snapshot of a table (time travel) | Databricks on AWS] Learn more

NEW QUESTION # 121

Which of the following describes the relationship between Gold tables and Silver tables?

- A. Gold tables are more likely to contain a less refined view of data than Silver tables.
- B. Gold tables are more likely to contain more data than Silver tables.
- C. Gold tables are more likely to contain valuable data than Silver tables.
- D. Gold tables are more likely to contain truthful data than Silver tables.
- E. Gold tables are more likely to contain aggregations than Silver tables.

Answer: E

Explanation:

Explanation

In some data processing pipelines, especially those following a typical "Bronze-Silver-Gold" data lakehouse architecture, Silver tables are often considered a more refined version of the raw or Bronze data. Silver tables may include data cleansing, schema enforcement, and some initial transformations. Gold tables, on the other hand, typically represent a stage where data is further enriched, aggregated, and processed to provide valuable insights for analytical purposes. This could indeed involve more aggregations compared to Silver tables.

NEW QUESTION # 122

A data engineer is working with two tables. Each of these tables is displayed below in its entirety.

The data engineer runs the following query to join these tables together:

Which of the following will be returned by the above query?

A.

customer_id	spend	store_id
a1	28.94	s1
a4	8.99	s2

B.

customer_id	spend	units	store_id
a1	28.94	7	s1
a4	8.99	1	s2

C.

customer_id	spend	store_id
a1	28.94	s1
a3	874.12	NULL
a4	8.99	s2

D.

customer_id	spend	store_id
a1	28.94	s1
a2	NULL	s1
a3	874.12	NULL
a4	8.99	s2

E.

customer_id	spend	store_id
a1	28.94	s1
a2	NULL	s1
a4	8.99	s2

- A. Option A
- B. Option B
- C. Option C
- D. Option E
- E. Option D

Answer: A

Explanation:

Option A is the correct answer because it shows the result of an INNER JOIN between the two tables. An INNER JOIN returns only the rows that have matching values in both tables based on the join condition. In this case, the join condition is ON a.customer_id = c.customer_id, which means that only the rows that have the same customer ID in both tables will be included in the output. The output will have four columns: customer_id, name, account_id, and overdraft_amt. The output will have four rows, corresponding to the four customers who have accounts in the account table.

NEW QUESTION # 123

A data engineer is working with two tables. Each of these tables is displayed below in its entirety.

sales

customer_id	spend	units
a1	28.94	7
a3	874.12	23
a4	8.99	1

favorite_stores

customer_id	store_id
a1	s1
a2	s1
a4	s2

The data engineer runs the following query to join these tables together:

```
SELECT
  sales.customer_id,
  sales.spend,
  favorite_stores.store_id
FROM sales
LEFT JOIN favorite_stores
ON sales.customer_id = favorite_stores.customer_id;
```

Which of the following will be returned by the above query?

customer_id	spend	store_id
a1	28.94	s1
a4	8.99	s2

- A.
- B.

customer_id	spend	store_id
a1	28.94	s1
a2	NULL	s1
a4	8.99	s2

- C.

customer_id	spend	store_id
a1	28.94	s1
a2	NULL	s1
a3	874.12	NULL
a4	8.99	s2

- D.

customer_id	spend	units	store_id
a1	28.94	7	s1
a4	8.99	1	s2

customer_id	spend	store_id
a1	28.94	s1
a3	874.12	NULL
a4	8.99	s2

- E.

Answer: E

NEW QUESTION # 124

In which of the following scenarios should a data engineer select a Task in the Depends On field of a new Databricks Job Task?

- A. When another task needs to use as little compute resources as possible
- B. When another task needs to fail before the new task begins
- C. When another task needs to successfully complete before the new task begins
- D. When another task needs to be replaced by the new task
- E. When another task has the same dependency libraries as the new task

Answer: C

Explanation:

A data engineer can create a multi-task job in Databricks that consists of multiple tasks that run in a specific order. Each task can have one or more dependencies, which are other tasks that must run before the current task. The Depends On field of a new Databricks Job Task allows the data engineer to specify the dependencies of the task. The data engineer should select a task in the Depends On field when they want the new task to run only after the selected task has successfully completed. This can help the data engineer to create a logical sequence of tasks that depend on each other's outputs or results. For example, a data engineer can create a multi-task job that consists of the following tasks:

- * Task A: Ingest data from a source using Auto Loader
- * Task B: Transform the data using Spark SQL
- * Task C: Write the data to a Delta Lake table
- * Task D: Analyze the data using Spark ML
- * Task E: Visualize the data using Databricks SQL

In this case, the data engineer can set the dependencies of each task as follows:

- * Task A: No dependencies
- * Task B: Depends on Task A
- * Task C: Depends on Task B
- * Task D: Depends on Task C
- * Task E: Depends on Task D

This way, the data engineer can ensure that each task runs only after the previous task has successfully completed, and the data flows smoothly from ingestion to visualization.

The other options are incorrect because they do not describe valid scenarios for selecting a task in the Depends On field. The Depends On field does not affect the following aspects of a task:

- * Whether the task needs to be replaced by another task
 - * Whether the task needs to fail before another task begins
 - * Whether the task has the same dependency libraries as another task
 - * Whether the task needs to use as little compute resources as possible
- References: Create a multi-task job, Run tasks conditionally in a Databricks job, Databricks Jobs.

NEW QUESTION # 125
