UiPath Automation Business Analyst Associate Exam (2023.10) Sample Questions (Q75-Q80):

NEW QUESTION # 75
In which three stages should user availability be clearly defined and communicated?

- A. Deployment, Hypercare, Project Closure
- B. Business Case Validation, Solution Design, UAT
- C. Solution Design, Testing, Discovery
- D. Kickoff, Process Analysis, UAT

Answer: D

Explanation:
User availability should be clearly defined and communicated in the Kickoff, Process Analysis, and UAT stages. These stages require

direct interaction with Client Team members such as process owners, subject matter experts (SMEs), and end users.
* During Kickoff, availability is discussed to plan for workshops, document reviews, and approvals.
* In Process Analysis, SMEs are needed to walk through the As-Is process for accurate documentation.
* In UAT, end users test the solution to ensure it meets business needs. Their availability is crucial for timely validation and sign-off.
Clear communication of availability in these stages helps avoid scheduling conflicts, delays, and incomplete information gathering.

NEW QUESTION # 76
What is the output of the Solution Design stage in the UiPath Automation Implementation Methodology?

- A. Process Definition Document (PDD)
- B. Approved Solution Design Document (SDD)
- C. Automation Test Plan
- D. Hypercare Support Plan

Answer: B

Explanation:
The main deliverable from the Solution Design stage is the Approved Solution Design Document (SDD).
This document contains a detailed description of the To-Be automation flow, including technical components, workflow modules, system interactions, exception handling strategies, and deployment plans.
The solution architect leads this stage, working with the automation developers and project manager to translate the requirements documented in the PDD into a scalable, modular, and efficient automation architecture. The SDD serves as the blueprint for the development team, ensuring consistency and clarity in how the automation should be built.
This document also includes details on infrastructure, access requirements, assumptions, dependencies, and constraints. A well-documented and approved SDD reduces development time, minimizes rework, and increases the likelihood of successful testing and deployment.

NEW QUESTION # 77
Which of the following roles is responsible for becoming well-versed in the business process to be automated?

- A. Solution Architect
- B. Automation Business Analyst
- C. Automation Developer
- D. Infrastructure Engineer

Answer: B

Explanation:
The Automation Business Analyst is responsible for becoming well-versed in the business process that is to be automated. Their role is to deeply understand the process from the business perspective and ensure that the automation solution aligns with business goals and stakeholder expectations.
They achieve this by conducting workshops, shadowing sessions, and interviews with Subject Matter Experts (SMEs) from the Client Team. They then document the As-Is process and help define the To-Be state, collaborating closely with the Solution Architect to ensure feasibility and completeness.
The Business Analyst is also instrumental in identifying automation candidates, validating business value, and defining success criteria and UAT scenarios. Their business-focused insights are essential in building automations that deliver real value and meet the organization's objectives.

NEW QUESTION # 78
How does integrating AI with RPA enhance business processes?

- A. AI cannot be integrated with RPA
- B. It facilitates intelligent decision-making and predictive analytics
- C. It simplifies the deployment of automation solutions
- D. It allows for greater flexibility in automating non-standard tasks

Answer: B

Explanation:
IntegratingAI with RPAsignificantly enhances business processes by enablingintelligent decision-making, predictive analytics, and cognitive automation capabilities. While traditional RPA excels at automating structured, rule-based tasks, it cannot handle unstructured data, ambiguity, or complex decisions on its own.

AI fills these gaps by providing capabilities such as machine learning, natural language processing, computer vision, and classification models.

When combined,AI + RPA = Intelligent Automation, allowing organizations to automate end#to#end processes that previously required human judgment. Examples include reading and interpreting emails, extracting data from documents using OCR and AI models, predicting outcomes based on historical data, detecting anomalies, and making context-based decisions.

This integration allows businesses to automatenon-standard,variable, ordata-heavyprocesses, greatly expanding the automation potential. It also increases accuracy, reduces manual workload, and improves operational resilience.

While AI does not simplify deployment by itself, it enhances thequalityandscopeof automation-making business processes smarter, faster, and more adaptive.

NEW QUESTION # 79

What document outlines the tests to be performed and logistics for end-user testing after development?

- A. User Acceptance Testing (UAT) Plan
- B. Project Readiness Checklist
- C. Solution Design Document (SDD)
- D. Application Tracker

Answer: A

Explanation:
TheUser Acceptance Testing (UAT) Planis the document that details howend-user testingwill occur once development is complete. It defines thetest cases,success criteria,testing timelines, andresponsible parties fromboth the Implementation and Client Teams.

This document is essential for organizing the UAT phase, ensuring that all involved stakeholders are aware of what will be tested, how issues will be logged, and who is responsible for resolving them. It also outlines the criteria that must be met for the automation to be considered acceptable and ready for production.

The UAT Plan supports a structured and transparent testing process, minimizing the risk of miscommunication and ensuring that the delivered solution meets business expectations. It helps validate that the automation aligns with the agreed-upon requirements, business rules, and user needs captured during the earlier stages of the project.
