Cisco Understanding Cisco Cybersecurity Operations Fundamentals Sample Questions (Q185-Q190):

NEW QUESTION # 185
Which technology on a host is used to isolate a running application from other applications?

- A. application block list
- B. sandbox
- C. application allow list
- D. host-based firewall

Answer: B

Explanation:
A sandbox is a technology on a host that is used to isolate a running application from other applications. A sandbox creates a controlled and restricted environment for the application to execute, limiting its access to system resources and data. A sandbox can prevent the application from spreading malware, stealing information, or causing damage to the host or the network. A sandbox can also be used to test and analyze the behavior of unknown or suspicious applications without risking the security of the host. Application allow list, application block list, and host-based firewall are other technologies on a host that can be used to control or restrict the execution of applications, but they do not isolate them from other applications. A company's user HTTP connection to a malicious site was blocked according to configured policy What is the source technology used for this measure'?

- A. IPS
- B. web proxy
- C. firewall
- D. network application control

Answer: B

Explanation:
A web proxy is the technology used to block a user's HTTP connection to a malicious site according to configured policy. It acts as an intermediary between users and the internet, enforcing security policies and preventing access to harmful sites by inspecting and managing web traffic.

What does this output indicate?

- A. FTP ports are open on the server.
- B. SMB ports are closed on the server.
- C. Email ports are closed on the server.
- D. HTTPS ports are open on the server.

Answer: C

Explanation:
What Are Ports 139 And 445? SMB has always been a network file sharing protocol. As such, SMB requires network ports on a computer or server to enable communication to other systems. SMB uses either IP port
139 or 445. Port 139 - SMB originally ran on top of NetBIOS using port 139. NetBIOS is an older transport layer that allows Windows computers to talk to each other on the same network. Port 445 - Later versions of SMB (after Windows 2000) began to use port 445 on top of a TCP stack. Using TCP allows SMB to work over the internet. https://www.varonis.com/blog/smb-port
SMB Ports 139 and 445 are open Email Ports 25 and 110 are closed Therefore "D. Email Ports are closed on the Server."

An engineer received an event log file to review. Which technology generated the log?

- A. NetFlow
- B. IDS/IPS
- C. firewall
- D. proxy

Answer: B

Explanation:
The exhibit shows an event log file with fields like date time action protocol src-ip dst-ip src-port dst-port etc., which are typical in Intrusion Detection Systems (IDS) or Intrusion Prevention Systems (IPS). These systems monitor network traffic for suspicious activity or violations of policies and produce reports as seen in the exhibit. References: Cisco Certified CyberOps Associate Overview
