問題 #35

When performing a search in an inventory check task which products are considered for the search?

- A. All products associated with the retail store
- B. All products in the organization
- C. All products owned by the user
- D. All products created by the user

答案：A

解題說明：

When performing a search in an inventory check task, only the products that are associated with the retail store are considered for the search. This is because the inventory check task is designed to verify the availability and quantity of products in a specific store location. 問題 #36

Product managers requested to make a brand new product available for the initial sale by account executives in Industries CPQ and support order fulfillment.

What are the two scope items to be included in the following sprints to meet the requirements?

- A. Product Model
- B. Decomposition Relationships
- C. OmniScript for Guided Selling Process
- D. Orchestration Process for MACD

答案：A,B

解題說明:

To make a brand-new product available for Industries CPQ initial sale and support order fulfillment, two major work items must be completed:

B . Decomposition Relationships

These define how the commercial product breaks into technical products required for fulfillment. Without decomposition, Order Management cannot generate Fulfillment Request Lines.

D . Product Model

The product must be fully modeled in the Enterprise Product Catalog (EPC):

Product Spec

Attributes

Prices

Cardinality

Bundles

Incorrect options:

A . OmniScript is optional; CPQ can still operate via the Cart without custom OmniScripts.

C . MACD Orchestration is not needed for initial sale; only fulfillment of new orders is required at launch

問題 #37

How can admins review the performance of the Object Detection Model?

- A. By creating a Custom Object
- **B. Through Detected Objects**
- C. By enabling Custom Object Detection
- D. Through Einstein Bots

答案: B

解題說明:

https://help.salesforce.com/s/articleView?id=sf.industries_einstein_object_detection_review_detected_objects.htm&type=5

Admins can review the performance of the Object Detection Model through Detected Objects, which are records that store the results of the object detection process. Detected Objects contain information such as the confidence score, the number of detections, and the bounding box coordinates for each object in an image.

Admins can use reports and dashboards to analyze the Detected Objects data and evaluate the accuracy and performance of the Object Detection Model. Verified References: [Salesforce Consumer Goods Cloud Implementation Guide], page 24.

問題 #38

Which three fields are available on the Retail Store object that differentiate them from the Account object?

- A. Delivery Method
- **B. Operating Hours**
- **C. Shipping Address**
- D. Payment Method
- **E. Preferred Visit Hours**

答案: B,C,E

解題說明:

These fields on the Retail Store object differentiate it from the Account object, providing specific information about store operations, preferred visit timings, and shipping details.

問題 #39

How can a merchandiser perform a check-in to log the arrival time and geo coordinates for an inventory- check appointment?

- **A. Check-in through Salesforce Mobile App**
- B. Check-in through Salesforce Maps on mobile
- C. Check-in through Einstein Vision

- D. Check-in through standard location picker Lightning Web Component in Salesforce Mobile App

答案：A

解題說明：

A merchandiser can perform a check-in to log the arrival time and geo coordinates for an inventory-check appointment by using the Salesforce Mobile App. The Salesforce Mobile App is a mobile version of Salesforce that allows users to access and use various features and tools on their mobile devices. A check-in is a feature that allows users to record their arrival at a location, such as a retail store, by using their device's GPS. A check-in can be performed by tapping the Check In button on the visit record in the Salesforce Mobile App. Verified References: [Salesforce Consumer Goods Cloud Implementation Guide], page 34.
