

Juniper JN0-253 Test Dump | Dump JN0-253 Check

P.S. Free 2025 Juniper JN0-253 dumps are available on Google Drive shared by PassTestking: <https://drive.google.com/open?id=1D4qL88QFIp3yoLuFru8aw0ySJUNxC5RW>

When we choose to find a good job, there is important to get the JN0-253 certification as you can. There is a fabulous product to prompt the efficiency--the JN0-253 exam prep, as far as concerned, it can bring you high quality learning platform to pass the variety of exams. Our product is elaborately composed with major questions and answers. It only takes you 20 hours to 30 hours to do the practice. After your effective practice, you can master the examination point from the JN0-253 Test Question. Then, you will have enough confidence to pass it.

Juniper JN0-253 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Juniper Mist Cloud Fundamentals: This domain covers Juniper's cloud-native platform architecture, focusing on AI and machine learning capabilities for intelligent network management and real-world deployment scenarios.
Topic 2	<ul style="list-style-type: none">Juniper Mist Monitoring and Analytics: This domain focuses on monitoring tools including service-level expectations, packet captures, AI-driven insights, automated alerts, and audit logs for comprehensive network visibility.
Topic 3	<ul style="list-style-type: none">Juniper Mist Network Operations and Management: This domain examines operational features across Wi-Fi, Wired, WAN, Routing, and Access Assurance, delivering specialized management capabilities for different network infrastructure layers.
Topic 4	<ul style="list-style-type: none">Marvis Virtual Network Assistant AI: This domain introduces Marvis, an AI-powered assistant providing automated troubleshooting through intelligent actions, natural language queries, and specialized analytical tools for proactive issue resolution.

Topic 5	<ul style="list-style-type: none"> Juniper Mist Configuration Basics: This domain addresses initial setup including user accounts, device onboarding, organizational structures, subscription licensing, certificate management, and automated provisioning with labels and policies.
Topic 6	<ul style="list-style-type: none"> Location-based Services: This domain presents virtual Bluetooth Low Energy capabilities for asset tracking, visibility, and location-aware experiences that extend networking into physical space management.

Dump JN0-253 Check | JN0-253 Reliable Exam Sample

The industry experts hired by JN0-253 study materials explain all the difficult-to-understand professional vocabularies easily. All the languages used in JN0-253 real exam were very simple and easy to understand. With our JN0-253 study guide, you don't have to worry about that you don't understand the content of professional books. You also don't need to spend expensive tuition to go to tutoring class. JN0-253 Practice Engine can help you solve all the problems in your study.

Juniper Mist AI, Associate (JNCIA-MistAI) Sample Questions (Q63-Q68):

NEW QUESTION # 63

When a Juniper Mist managed switch is powered on, which event must be completed prior to the Zero-Touch Provisioning (ZTP) process moving forward?

- A. The switch's clock must be synchronized with an NTP server.
- B. NETCONF must be configured on the switch.
- C. All user accounts must be configured on the switch.
- **D. A DHCP lease must be obtained by the switch.**

Answer: D

Explanation:

A DHCP lease must be obtained by the switch before the ZTP process proceeds. Juniper documentation clarifies: "Ensure that a DHCP server is reachable. In addition to providing an IP address to the switch, your DHCP server must provide the following information: a default gateway, an NTP server, and a DNS server address..." The initial event in the ZTP workflow is the switch receiving a valid IP address via DHCP. Only after obtaining an address can the switch connect to the Mist cloud and proceed with zero-touch provisioning.

Other requirements, such as user account, NETCONF, or NTP sync, occur later or are handled automatically via cloud policy after onboarding.

NEW QUESTION # 64

What are two ways that Juniper Mist Wireless Assurance enhances troubleshooting capabilities? (Choose two.)

- A. by monitoring congestion uplink as a percentage of gateway bandwidth
- B. by alerting administrators of subscription options through e-mail
- **C. by using Predictive Analytics and Correlation Engine (PACE)**
- **D. by employing dynamic packet capture**

Answer: C,D

Explanation:

Juniper Mist Wireless Assurance revolutionizes network troubleshooting by implementing Predictive Analytics and Correlation Engine (PACE) and dynamic packet capture. According to the official Mist documentation, PACE applies advanced data science and machine learning to analyze real network events and classify them for root-cause identification. The Mist PACE engine proactively identifies issues by correlating over 150 client and AP state changes, enabling the system to surface recommendations and automate root-cause resolution. This allows IT teams to move beyond reactive troubleshooting towards predictive and

automated network operations, reducing time-to-resolution and minimizing user impact.

Additionally, dynamic packet capture significantly streamlines troubleshooting efforts. Mist Wireless Assurance automatically detects anomalies or failures in user and network behavior and instantly initiates a packet capture. These packet captures are contextually tagged to the affected event, stored in the cloud, and are readily accessible for analysis. This process eliminates the need for on-site technicians with sniffers, as now every major incident already has an associated packet capture, captured at the right moment. This capability greatly reduces troubleshooting time and ensures that issues can be reproduced and isolated accurately.

NEW QUESTION # 65

You are asked to configure Mist to send e-mail alerts to your organization administrators, who all have mailboxes that reside on the same e-mail server. Alerts are being generated and are visible in the Mist GUI, but only some administrators are receiving the alert e-mails.

What is the problem in this scenario?

- A. The user e-mail addresses are not correctly formatted.
- **B. The affected administrators have not enabled e-mail notifications in their Mist My Account settings.**
- C. Your e-mail server is blocking e-mail from Mist.
- D. The organization does not have sufficient alert subscriptions.

Answer: B

Explanation:

Identify the Problem: Alerts are being generated and visible in the Mist GUI, but only some administrators receive the alert emails.

Possible Issues:

User email addresses not correctly formatted.

Email server blocking Mist emails.

Insufficient alert subscriptions.

Administrators not enabling email notifications.

Root Cause:

Since some administrators receive the alerts, email formatting and server blocking issues can be ruled out.

If alert subscriptions were insufficient, no administrators would receive the alerts. The most likely cause is that the affected administrators have not enabled email notifications in their Mist My Account settings.

Resolution:

Ensure that all administrators have enabled email notifications in their Mist My Account settings.

NEW QUESTION # 66

The Mist Site Insights Dashboard helps network administrators in which two ways? (Choose two.)

- A. It displays when a bad event has been logged.
- **B. It identifies when a monitored component of the network has crossed a defined threshold.**
- **C. It identifies issues affecting an end user's network experience displayed as a percentage of success.**
- D. It displays information about the current WLANs.

Answer: B,C

NEW QUESTION # 67

Which statement is true about wireless security?

- A. Juniper APs use the BLE radio to scan for rogue and honeypot APs.
- B. Juniper APs use the 2.4-GHz radio to scan for rogue and honeypot APs.
- C. Juniper APs use the 5-GHz radio to scan for rogue and honeypot APs.
- **D. Juniper APs have a dedicated radio to scan for rogue and honeypot APs.**

Answer: D

Explanation:

The correct statement is that Juniper APs have a dedicated radio to scan for rogue and honeypot APs. The official Juniper Mist documentation specifies: "Juniper APs include a dedicated scanning radio to detect rogue, neighbor, and honeypot APs and their clients... The dedicated scanning radios operate on 2.4, 5, and 6 GHz Wi-Fi bands." This third radio operates independently from the client-serving radios and enables continuous threat detection on all Wi-Fi bands, enhancing security and allowing real-time performance adjustments. BLE radios are used for location-based services and asset tracking, not for rogue AP detection. Client-serving radios can also scan, but detection is always enabled and optimized by the dedicated radio.
