

# Pass Guaranteed 300-540 - Designing and Implementing Cisco Service Provider Cloud Network Infrastructure Updated Exam Vce

The Actual4Dumps is committed to helping the Cisco Designing and Implementing Cisco Service Provider Cloud Network Infrastructure exam candidates in the certification exam preparation and success journey. To achieve this objective the Actual4Dumps is offering valid, updated, and verified Cisco 300-540 Exam Questions in three different formats. These three different Cisco Designing and Implementing Cisco Service Provider Cloud Network Infrastructure exam dumps types are Cisco PDF Questions Links to an external site.

## Cisco 300-540 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>Service Assurance and Optimization: This section of the exam measures the skills of Cloud Operations Engineers and covers assurance mechanisms used to maintain performance, stability, and visibility across NFVI environments. It includes network assurance concepts such as MANO frameworks, VNF workload monitoring, VIM control plane KPIs, and streaming telemetry with gRPC and gNMI. Candidates must understand cloud infrastructure performance monitoring tools, including SR-PM, NetFlow, IPFIX, syslog, SNMP traps, RMON, cloud agents, and automated fault management systems. The domain also touches on diagnosing NFVI-related errors and optimizing VNFs using techniques such as SR-IOV and software-accelerated virtual switching technologies like DPDK and VPP.</li></ul>
Topic 2	<ul style="list-style-type: none"><li>Cloud Interconnect: This section of the exam measures the skills of Service Provider Network Engineers and covers how large networks interconnect with cloud platforms and carrier-neutral facilities. Candidates are expected to understand various connectivity options to cloud providers, customer sites, and other neutral facilities, as well as evaluate WAN connectivity models such as direct connect, MPLS or segment routing, and IPsec VPN links. The domain also includes the ability to troubleshoot advanced data center interconnect solutions, including EVPN VXLAN, EVPN over SR</li><li>MPLS, ACI-based connectivity, and pseudowire architectures supporting cloud-to-cloud and cloud-to-edge communication.</li></ul>

Topic 3	<ul style="list-style-type: none"> <li>Virtualized Architecture: This section of the exam measures the skills of Cloud Network Engineers and covers the foundational concepts of virtualized infrastructures used in modern service provider and cloud environments. Candidates are expected to understand constraints in IaaS designs, determine appropriate cloud service models, and demonstrate awareness of container orchestration compared to traditional virtual machines. The exam also evaluates the ability to implement key virtualization functions such as NFV, VNF, NSO, and virtualized Cisco platforms. Learners must be able to deploy NFV with automation tools, manage VNF onboarding, work with NSO-driven orchestration, and use protocols like NETCONF, RESTCONF, REST APIs, and gNMI within automated cloud ecosystems. A general understanding of supporting platforms such as OpenStack also forms part of the required knowledge in this domain.</li> </ul>
Topic 4	<ul style="list-style-type: none"> <li>High Availability: This section of the exam measures the skills of Cloud Infrastructure Architects and covers the design and implementation of redundancy and resiliency mechanisms in virtualized network functions and distributed cloud platforms. It includes data plane redundancy for VNFs, high availability within a single VIM control plane, and resilient compute, vNIC, and top-of-rack switching. The exam requires an understanding of multi-homing, EVLAG configurations, virtual private cloud deployment, and ECMP strategies for NFVI integrations with physical routing protocols such as BGP, OSPF, and IS-IS. Candidates must also recommend suitable high-availability models involving DNS, routing, and load balancing.</li> </ul>
Topic 5	<ul style="list-style-type: none"> <li>Security: This section of the exam measures the skills of Network Security Engineers and covers the implementation of infrastructure-level protection in cloud and NFVI ecosystems. It includes topics such as ACLs, uRPF, RTBH, router hardening, BGP flowspec, TACACS, and MACSEC. Candidates should understand DoS mitigation methods and apply security practices within NFVI, focusing on API protection, securing the control and management plane, and segmentation strategies in service provider cloud environments. The domain also evaluates basic knowledge of TLS, mTLS, and general cloud security solutions related to DNS protection, zero-day defenses, and malware detection.</li> </ul>

## 300-540 Reliable Exam Materials - Exam 300-540 Quiz

Our company has employed a lot of leading experts in the field to compile the 300-540 Exam Materials, in order to give candidate a chance to pass the 300-540 exam. So many candidates see our Actual4Dumps web page occasionally, and they are attracted by our high quality and valid dumps. They bought it without any hesitation. However, they passed the exam successfully. It turned out that their choice was extremely correct.

## Cisco Designing and Implementing Cisco Service Provider Cloud Network Infrastructure Sample Questions (Q56-Q61):

### NEW QUESTION # 56

What is a benefit of using machine learning in Cisco AFM?

- A. It enables AFM to predict potential network faults ahead of time.
- B. It enables AFM to perform hardware upgrades on network devices.
- C. It enables AFM to function without an Internet connection.
- D. It enables AFM to consume fewer resources.

### Answer: A

Explanation:

Comprehensive and Detailed Explanation From Cisco SP Cloud & AFM Knowledge Cisco AFM (Active Fault Manager), part of Cisco Crosswork, uses machine learning algorithms to:

\* Analyze large volumes of telemetry

\* Detect anomalies

\* Identify abnormal behavior patterns

\* Predict potential service-impacting faults before they occur

This predictive analytics capability is one of AFM's core advantages, enabling proactive fault avoidance rather than reactive

troubleshooting.

The other options do not represent AFM functionality:

- \* AFM does not require offline operation(B).
- \* It does not upgrade hardware(C).
- \* ML does not reduce resource usage(D); it increases analytical capability.

Thus, A is correct.

#### **NEW QUESTION # 57**

Direct Connect offers which of the following advantages over traditional internet connections?

- A. More consistent network performance
- B. Higher latency
- C. Increased security
- D. Reduced bandwidth

**Answer: A,C**

#### **NEW QUESTION # 58**

Which of the following is used to restrict access to network resources through policies?

- A. ACL
- B. MACSEC
- C. TACACS
- D. BGP flowspec

**Answer: A**

#### **NEW QUESTION # 59**

Virus detectors are crucial for:

- A. Managing network bandwidth effectively
- B. Enhancing the physical security of network devices
- C. Increasing the efficiency of network protocols
- D. Detecting and removing malicious software

**Answer: D**

#### **NEW QUESTION # 60**

A virtual private cloud (VPC) is implemented to provide \_\_\_\_\_ isolation within a public cloud environment.

- A. application
- B. user
- C. physical
- D. network

**Answer: D**

#### **NEW QUESTION # 61**

.....

Our company is widely acclaimed in the industry, and our 300-540 study materials have won the favor of many customers by virtue of their high quality. Started when the user needs to pass the qualification test, choose the 300-540 study materials, they will not have any second or even third backup options, because they will be the first choice of our practice exam materials. Our 300-540 Study Materials are devoted to research on which methods are used to enable users to pass the test faster.
