2026 QSA_New_V4: Qualified Security Assessor V4 Exam Marvelous Top Questions

If you want to get through the QSA_New_V4 practice exam quickly with less time and efforts, our learning materials is definitely your best option. One or two days' preparation and remember the correct QSA_New_V4 test answers, getting the certification will be simple for our candidates. Free trials of QSA_New_V4 Exam PDF are available for everyone and great discounts are waiting for you. Join us and realize your dream.

PCI SSC QSA_New_V4 Exam Syllabus Topics:

Topic	Details

Topic 1	<ul style="list-style-type: none"> • PCI DSS Testing Procedures: This section of the exam measures the skills of PCI Compliance Auditors and covers the testing procedures required to assess compliance with the Payment Card Industry Data Security Standard (PCI DSS). Candidates must understand how to evaluate security controls, identify vulnerabilities, and ensure that organizations meet compliance requirements. One key skill evaluated is assessing security measures against PCI DSS standards.
Topic 2	<ul style="list-style-type: none"> • PCI Reporting Requirements: This section of the exam measures the skills of Risk Management Professionals and covers the reporting obligations associated with PCI DSS compliance. Candidates must be able to prepare and submit necessary documentation, such as Reports on Compliance (ROCs) and Self-Assessment Questionnaires (SAQs). One critical skill assessed is compiling and submitting accurate PCI compliance reports.
Topic 3	<ul style="list-style-type: none"> • Payment Brand Specific Requirements: This section of the exam measures the skills of Payment Security Specialists and focuses on the unique security and compliance requirements set by different payment brands, such as Visa, Mastercard, and American Express. Candidates must be familiar with the specific mandates and expectations of each brand when handling cardholder data. One skill assessed is identifying brand-specific compliance variations.
Topic 4	<ul style="list-style-type: none"> • PCI Validation Requirements: This section of the exam measures the skills of Compliance Analysts and evaluates the processes involved in validating PCI DSS compliance. Candidates must understand the different levels of merchant and service provider validation, including self-assessment questionnaires and external audits. One essential skill tested is determining the appropriate validation method based on business type.
Topic 5	<ul style="list-style-type: none"> • Real-World Case Studies: This section of the exam measures the skills of Cybersecurity Consultants and involves analyzing real-world breaches, compliance failures, and best practices in PCI DSS implementation. Candidates must review case studies to understand practical applications of security standards and identify lessons learned. One key skill evaluated is applying PCI DSS principles to prevent security breaches.

PCI SSC Qualified Security Assessor V4 Exam Sample Questions (Q67-Q72):

NEW QUESTION # 67

Which of the following statements is true regarding track equivalent data on the chip of a payment card?

- A. It is not applicable for PCI DSS Requirement 3.2.
- B. It is allowed to be stored by merchants after authorization, if encrypted.
- **C. It is sensitive authentication data.**
- D. It is out of scope for PCI DSS.

Answer: C

Explanation:

Track equivalent data- whether from a magnetic stripe or embedded chip - falls under Sensitive Authentication Data (SAD) and must not be stored after authorization, even if encrypted. This is covered under Requirement 3.3.1 and Table 3 in PCI DSS v4.0.1.

* Option A: Incorrect. SAD must not be stored after authorization, regardless of encryption.

* Option B: Correct. Track equivalent data is explicitly defined as SAD.

* Option C: Incorrect. SAD is fully in-scope for PCI DSS.

* Option D: Incorrect. Requirement 3.2 and 3.3 specifically address SAD.

NEW QUESTION # 68

A retail merchant has a server room containing systems that store encrypted PAN data. The merchant has implemented a badge access-control system that identifies who entered and exited the room, on what date, and at what time. There are no video cameras located in the server room. Based on this information, which statement is true regarding PCI DSS physical security requirements?

- A. The merchant must install motion-sensing alarms in addition to the existing access-control system.
- B. The merchant must install video cameras in addition to the existing access-control system.

- C. Data from the access-control system must be securely deleted on a monthly basis.
- **D. The badge access-control system must be protected from tampering or disabling.**

Answer: D

Explanation:

Physical Security Requirements:

* PCI DSS Requirement 9.1.1 mandates that physical access control systems (like badge readers) must be protected against tampering or disabling to ensure continuous security.

Current Implementation:

* The merchant's badge access-control system provides essential logging of access events but must also be protected against tampering to comply with PCI DSS.

Invalid Options:

- * B: Video cameras are recommended but not explicitly required if access controls effectively ensure security.
- * C: Secure deletion of access-control logs is not a PCI DSS requirement; logs must be retained as per retention policies.
- * D: Motion-sensing alarms are not mandatory under PCI DSS physical security requirements.

NEW QUESTION # 69

Passwords for default accounts and default administrative accounts should be?

- **A. Changed before installing a system on the network.**
- B. Changed within 30 days after installing a system on the network.
- C. Configured to expire in 30 days.
- D. Reset to the default password before installing a system on the network.

Answer: A

Explanation:

According to Requirement 2.2.6, default passwords must be changed before systems are installed on the network. The use of default credentials (such as "admin/admin") presents a major security risk and is a well-known vector for breaches.

- * Option A: #Incorrect. Changing within 30 days is not soon enough per PCI DSS.
- * Option B: #Incorrect. Resetting to default would defeat the purpose of secure configuration.
- * Option C: #Correct. The requirement is to change default passwords prior to network connection.
- * Option D: #Incorrect. Password expiration policies are a separate topic under Requirement 8.

References:

PCI DSS v4.0.1 - Requirement 2.2.6;

PCI DSS v4.0.1 - Guidance for Requirement 2.2.6.

NEW QUESTION # 70

In accordance with PCI DSS Requirement 10, how long must audit logs be retained?

- **A. At least 1 year, with the most recent 3 months immediately available.**
- B. At least 2 years, with the most recent month immediately available.
- C. At least 3 months, with the most recent month immediately available.
- D. At least 2 years, with the most recent 3 months immediately available.

Answer: A

Explanation:

Per Requirement 10.5.1.2, audit logs must be retained for at least one year, and the most recent three months must be readily available for analysis. This ensures traceability of security events over both short and longer-term periods.

- * Option A: #Correct. Matches both duration and availability criteria.
- * Option B: #Incorrect. Two years is not required.
- * Option C: #Incorrect. The retention period is misstated.
- * Option D: #Incorrect. One month is insufficient for immediate access.

NEW QUESTION # 71

Viewing of audit log files should be limited to?

- A. Individuals with read/write access.
- **B. Individuals with a job-related need.**
- C. Individuals with administrator privileges.
- D. Individuals who performed the logged activity.

Answer: B

Explanation:

Requirement 10.5.1.1 requires that audit logs be protected from unauthorised viewing and modification, and access should be restricted to individuals with a job-related need to view them. This principle aligns with least privilege and ensures accountability.

* Option A: Incorrect. The person who performed the action may not need to view logs.

* Option B: Incorrect. Read/write access is too permissive.

* Option C: Incorrect. Not all administrators need access to logs.

* Option D: Correct. Access should be based on job function.
