interactive sharing and after-sales service. As long as you need help, we will offer instant support to deal with any of your problems about our 010-160 exam questions

## Lpi Linux Essentials Certificate Exam - version 1.6 Sample Questions (Q37-Q42):

### NEW QUESTION # 37

Which of the following is a protocol used for automatic IP address configuration?

- A. NFS
- B. LDAP
- C. SMTP
- D. DNS
- E. DHCP

**Answer: E**

### NEW QUESTION # 38

Which of the following commands puts the lines of the file data.csv into alphabetical order?

- A. a..z data.csv
- B. sort data.csv
- C. abc data.csv
- D. grep --sort data.csv
- E. wc -s data.csv

**Answer: B**

Explanation:

The sort command is used to sort the lines of a file or a stream of input according to a specified criterion, such as alphabetical order, numerical order, reverse order, etc. By default, the sort command sorts the lines in ascending alphabetical order, using the first character of each line as the key. For example, the command `sort data.csv` will sort the lines of the file data.csv in alphabetical order and display the output on the screen. If you want to save the sorted output to a new file, you can use the redirection operator (`>`) to specify the output file name. For example, the command `sort data.csv > sorted_data.csv` will sort the lines of the file data.csv in alphabetical order and save the output to a new file named sorted\_data.csv. The other commands are either invalid or do not perform the sorting operation. The `a..z` command does not exist, the `abc` command is a text editor, the `wc` command counts the number of words, lines, and bytes in a file, and the `grep` command searches for a pattern in a file or a stream of input.

Therefore, the correct answer is B.

### NEW QUESTION # 39

Which of the following programs are web servers? (Choose two.)

- A. Postfix
- B. Apache HTTPD
- C. Curl
- D. Dovecot
- E. NGINX

**Answer: B,E**

### NEW QUESTION # 40

Most commands on Linux can display information on their usage. How can this information typically be displayed?

- A. By running the command with the option `-h` or `--help`.

- B. By running the command with the option `?! or ?=!`.
- C. By running the command with the option `/doc or /documentation`.
- D. By running the command with the option `-m or --manpage`.
- E. By running the command with the option `?/ or /??`.

**Answer: A**

Explanation:

Explanation

Most commands on Linux can display information on their usage by running the command with the option `-h` or `--help`. This option shows a brief summary of the command syntax, options, arguments, and examples. For example, running `ls -h` or `ls --help` will display the usage information for the `ls` command, which lists files and directories. The `-h` or `--help` option is a standard convention for most Linux commands, and it is useful for learning how to use a command or checking its available options. However, some commands may not support this option, or may use a different option to display usage information. In that case, you can use the `man` command to access the manual page for the command, which provides more detailed information on the command usage, description, options, arguments, examples, and references. For example, running `man ls` will display the manual page for the `ls` command. The `man` command is one of the applications covered in the Linux Essentials certification program from the Linux Professional Institute (LPI). References:

#### NEW QUESTION # 41

Which of the following commands sets the variable `USERNAME` to the value `bob`?

- **A. `USERNAME=bob`**
- B. `$USERNAME==bob`
- C. `var USERNAME=bob`
- D. `USERNAME<=bob`
- E. `set USERNAME bob`

**Answer: A**

#### NEW QUESTION # 42

.....
