Palo Alto Networks PSE-Cortex Questions Pdf, PSE-Cortex Latest Guide Files

Our PSE-Cortex real dumps was designed by many experts in different area, they have taken the different situation of customers into consideration and designed practical PSE-Cortex study materials for helping customers save time. Whether you are a student or an office worker,we believe you will not spend all your time on preparing for PSE-Cortex Exam. With our simplified information, you are able to study efficiently.

The PSE-Cortex Certification Exam covers a wide range of topics, including threat investigation, incident response, endpoint protection, and network security. PSE-Cortex exam is designed to test the candidate's ability to configure, troubleshoot, and optimize the Cortex XDR platform to protect their organization's assets from advanced cyber threats.

Palo Alto Networks System Engineer - Cortex Professional Sample Questions (Q160-Q165):

NEW QUESTION # 160
Which two troubleshooting steps should be taken when an integration is failing to connect?
(Choose two.)

- A. Check the integration logs and enable a higher logging level, if needed, view the specific error.
- B. Confirm the integration credentials or API keys are valid.
- C. Ensure the playbook is set to run in quiet mode to minimize CPU usage and suppress errors
- D. Confirm there are no dashboards or reports configured to use that integration instance.

Answer: A,B

NEW QUESTION # 161

When a Demisto Engine is part of a Load-Balancing group it?

- A. Must be in a Load-Balancing group with at least another 3 members
- B. Cannot be used separately and does not appear in the in the engines drop-down menu when configuring an integration instance
- C. It must have port 443 open to allow the Demisto Server to establish a connection
- D. Can be used separately as an engine, only if connected to the Demisto Server directly

Answer: C

NEW QUESTION # 162

On a multi-tenanted v6.2 Cortex XSOAR server, which path leads to the server.log for "Tenant1"?

- A. /var/lib/demisto/acc_Tenant1/server.log
- B. /var/log/demisto/acc_Tenant1/server.log
- C. /var/lib/demisto/server.log
- D. /var/log/demisto/Tenant1/server.log

Answer: B

Explanation:
Reference: https://live.paloaltonetworks.com/twzvq79624/attachments/twzvq79624
/Cortex_XSOAR_Release_Announcements/15/7/Multi-Tenant%206.1.pdf
In a multi-tenant setup, Cortex XSOAR organizes logs by tenant using a specific directory structure. The prefix acc_ (short for "account") is used to differentiate tenant-specific directories within the /var/log/demisto/ path. This convention helps in clearly segregating logs for different tenants, making it easier for administrators to manage and troubleshoot issues specific to each tenant. On the other hand, /var/log/demisto
/Tenant1/server.log does not follow the standard naming convention used in multi-tenant environments for Cortex XSOAR, which includes the acc_ prefix to indicate tenant accounts.

NEW QUESTION # 163

Which service helps identify attackers by combining world-class threat intelligence with Cortex XSIAM technology?

- A. Cloud Identity Engine
- B. Managed Threat Hunting
- C. Virtual Desktop Infrastructure
- D. Threat Intelligence Platform

Answer: B

NEW QUESTION # 164

Which statement applies to the malware protection flow of the endpoint agent in Cortex XSIAM?

- A. Hash comparisons come after local static analysis.
- B. Local analysis always happens before a WildFire verdict check.
- C. The block list is verified in the final step.
- D. A tile from an allowed signer is exempt from local analysis.

Answer: A

Explanation:
In the malware protection flow of the endpoint agent in Cortex XSIAM, hash comparisons are performed after local static analysis. This ensures that files are first analyzed locally to determine whether they are suspicious or potentially harmful, and then their hash is compared against known threat intelligence to check for any known malicious files.
