Salesforce Certified B2C Commerce Architect certification is ideal for professionals who are looking to advance their careers in the eCommerce domain and want to demonstrate their proficiency in the B2C Commerce platform.

Salesforce Certified B2C Commerce Architect Sample Questions (Q30-Q35):

NEW QUESTION # 30

An organization uses B2C Commerce to capture order details but needs to process the order in an ERP system. They want B2C Commerce to send a message to the ERP system with the order details after they have been entered, then wait for the order to be processed, and then receive a reply from the ERP system with the order number and status. Which integration pattern should a Solution Architect use to meet this requirement?

- A. Publish / Subscribe
- B. Batch Data Synchronization
- **C. Request and Reply**
- D. Asynchronous Call-Out

Answer: C

NEW QUESTION # 31

An Architect is configuring a data replication schedule. Which task(s) can be removed in order to reduce replication times?

- A. Storefront URLs
- B. Search Indexes
- C. Campaign
- **D. Static content**

Answer: D

Explanation:

Reducing the replication times in data synchronization can be effectively achieved by removing or reducing frequency of tasks that are less critical or that do not change frequently. Static content, such as images and static texts that do not change often, can be safely removed from frequent replication schedules (Answer B).

This adjustment will reduce the data load and frequency of updates, thereby speeding up the overall replication process. Unlike dynamic content like campaigns, search indexes, or URLs that might change frequently and impact user experience or site functionality if not updated, static content does not typically necessitate immediate replication, making it a suitable candidate for removal to enhance replication efficiency.

NEW QUESTION # 32

Which method is efficient and scalable because it uses the product search index rather than searching the database?

- A. `ProductIndexModel.getOrderableProductsOnly()`
- **B. `ProductSearchModel().getProductSearchHits()`**
- C. `ProductAvailabilityModel.isOrderable()`
- D. `ProductVariantManager().getVariants()`

Answer: B

NEW QUESTION # 33

There is an issue with the site when the domain is opened from Google search results. After researching the problem, it turns out that the site returns a 404 page error when accessed with a parameter in the URL.

What should the Architect recommend to fix that issue?

- A. Add this snippet to the aliases configuration for the domain
- B. Add dynamic catch-all rule to redirect to home page.
- C. Add dynamic redirect if the URL contains parameter to Home Show. Add this snippet to the aliases configuration for the domain
- **D. Add this snippet to the aliases configuration for the domain:**

Answer: D

NEW QUESTION # 34

The Client is creating a new Storefront and their requirements include:

- * ApplePay support
- * Log in through a standard OAuth2 social media account
- * One Click checkout process
- * A/B testing for promotions

Which two items require technical documentation for customizing the Storefront Reference Architecture?

Choose 2 answers

- A. ApplePay support
- **B. log in through a standard OAuth2 social media account**
- C. A/B testing for promotions
- **D. One Click checkout process**

Answer: B,D

Explanation:

For customizing the Storefront Reference Architecture to meet specific requirements, the following items would require detailed technical documentation:

Option A (One Click checkout process): Implementing a one-click checkout process involves significant customization to streamline the checkout flow, potentially requiring integration with payment providers and modifications to the user session management.

Option C (Log in through a standard OAuth2 social media account): Integrating OAuth2 for social media logins involves handling authentication tokens, user sessions, and potentially syncing user data with the B2C Commerce profiles, all of which require detailed security and integration documentation.

These customizations require careful planning and implementation to ensure they work seamlessly with existing Storefront Reference Architecture components and meet security standards.
