Which Data Page scope ensures that a case always retrieves the latest version of sourced data?

- A. Thread
- B. Requestor
- C. Node
- D. Case

#### Answer: D

Explanation:

A Case-scoped Data Page ensures that each case maintains and updates its own version of sourced data. This is useful when case-specific information, such as approvals or customer details, needs to be refreshed per transaction. It prevents unintended data sharing between cases. This scope improves data isolation and accuracy.

- A. The case is automatically closed
- B. The case is reassigned to a different work group
- C. The SLA settings are removed
- D. The urgency is increased, triggering escalation

#### Answer: D

Explanation:

When a case reaches its SLA deadline, urgency spikes, triggering escalations such as notifications or reassignment. The system ensures overdue tasks receive immediate attention.
