Visitors of Getcertkey can check the SAFe-Practitioner product by trying a free demo. Buy the SAFe-Practitioner test preparation material now and start your journey towards success in the SAFe-Practitioner examination.

### Scrum SAFe Practitioner Exam (6.0) Sample Questions (Q126-Q131):

#### NEW QUESTION # 126

What is one issue when organizing around functional silos?

- A. They impede how value flows
- B. They do not provide development opportunities for employees
- C. Operational activities are not included
- D. Corporate responsibilities are not a focus

**Answer: A**

Explanation:

One issue when organizing around functional silos is that they impede how value flows from concept to delivery. Functional silos create barriers and delays between different teams and departments, which can result in waste, rework, handoffs, and misalignment. To achieve business agility, enterprises need to organize around value streams, which are the primary constructs for understanding

organizing, and delivering value in SAFe. Value streams are long-lived series of steps that deliver value to the customer or end user. By organizing around value streams, enterprises can optimize the flow of value across functional boundaries, reduce lead time, and increase customer satisfaction. References: SAFe for Teams Student Workbook: materials and exercises from Lesson 1; [v5.scaledagileframework.com/organize-around-value/]; [v5.scaledagileframework.com/value-streams/]

#### NEW QUESTION # 127

Which of the below are Core Competencies for Business Agility?

- A. Continuous Integration
- B. Agile Product Delivery
- C. Continuous Learning Culture
- D. Lean Portfolio Management

**Answer: B,C,D**

#### NEW QUESTION # 128

A decrease in variability leads to an increase in what?

- A. Autonomy
- B. Options
- C. Predictability
- D. Innovation

**Answer: C**

Explanation:

According to the SAFe for Teams SP (6.0) - SAFe Practitioner handbook and study guide, a decrease in variability leads to an increase in predictability. Variability is the degree of uncertainty or variation in the outcomes of a process or a system. High variability means that the outcomes are more likely to deviate from the expected or desired results, which makes them harder to plan and control. Low variability means that the outcomes are more consistent and closer to the expected or desired results, which makes them easier to plan and control. Predictability is the ability to forecast or anticipate the outcomes of a process or a system with a high degree of confidence and accuracy. High predictability means that the outcomes are more likely to match the forecasts or expectations, which reduces the risk of failure and increases the value delivery. Low predictability means that the outcomes are more likely to differ from the forecasts or expectations, which increases the risk of failure and decreases the value delivery. Therefore, a decrease in variability leads to an increase in predictability, as the outcomes become more stable and reliable. References: Exam Study Guide:

SP (6.0) - SAFe Practitioner, SAFe for Teams - Know Your Role on an Agile Team, Assume variability; preserve options - Scaled Agile Framework

#### NEW QUESTION # 129

What is an example of applying cadence-based synchronization in SAFe?

- A. Allocating budgets to Value Streams
- B. Using a Portfolio Kanban system
- C. Conducting a PI Planning event
- D. Creating cross-functional ARTs and Agile teams

**Answer: C**

Explanation:

Conducting a PI Planning event is an example of applying cadence-based synchronization in SAFe. A PI Planning event is a two-day face-to-face or virtual meeting where all the members of an ART and Solution Train collaborate to align on a common vision, mission, and backlog, and plan the work for the next Program Increment (PI). A PI is a fixed timebox of 8 to 12 weeks that provides a regular cadence for delivering value.

The PI Planning event is synchronized across all the teams and trains in the portfolio, and it occurs at the beginning of every PI. The PI Planning event enables the ART and Solution Train to achieve alignment, collaboration, synchronization, and commitment, as well as to identify and address risks and dependencies. ## (6.0) - SAFe Practitioner

### NEW QUESTION # 130

What is the purpose of an empathy map?

- A. To help develop a deeper understanding of the customer
- B. To gain deeper insight to the members of an Agile Team
- C. To identify the customer
- D. To facilitate collaboration with other team members

**Answer: A**

Explanation:

= An empathy map is a tool used to better understand and empathize with a specific group of people, such as customers or users. It helps teams gain deeper insights into the thoughts, feelings, needs, and behaviors of the target audience. An empathy map consists of four quadrants that reflect what the user said, did, thought, and felt during the research phase. An empathy map helps to synthesize the user data, identify the user needs, and generate insights for the design challenge.
