

CMMC-CCA Aktuelle Prüfung - CMMC-CCA Prüfungsguide & CMMC-CCA Praxisprüfung

Zertpruefung ist eine Website, die alle Ihrer Bedürfnisse zur Cyber AB CMMC-CCA Zertifizierungsprüfung abdecken kann. Mit den Prüfungsmaterialien von Zertpruefung können Sie die Cyber AB CMMC-CCA Zertifizierungsprüfung mit einer ganz hohen Note bestehen.

Cyber AB CMMC-CCA Prüfungsplan:

Thema	Einzelheiten
Thema 1	• CMMC Level 2 Assessment Scoping: This section of the exam measures skills of cybersecurity assessors and revolves around determining the proper scope of a CMMC assessment. It involves analyzing and categorizing Controlled Unclassified Information (CUI) assets, interpreting the Level 2 scoping guidelines, and making accurate judgments in scenario-based exercises to define what assets and systems fall within assessment boundaries.
Thema 2	• Assessing CMMC Level 2 Practices: This section of the exam measures skills of cybersecurity assessors in evaluating whether organizations meet the required practices of CMMC Level 2. It emphasizes applying CMMC model constructs, understanding model levels, domains, and implementation, and using evidence to determine compliance with established cybersecurity practices.
Thema 3	• CMMC Assessment Process (CAP): This section of the exam measures skills of compliance professionals and tests knowledge of the full assessment lifecycle. It covers the steps needed to plan, prepare, conduct, and report on a CMMC Level 2 assessment, including the phases of execution and how to document and follow up on findings in alignment with DoD and CMMC-AB expectations.
Thema 4	• Evaluating Organizations Seeking Certification (OSC) against CMMC Level 2 Requirements: This section of the exam measures skills of cybersecurity assessors and focuses on evaluating the environments of organizations seeking certification at CMMC Level 2. It covers understanding differences between logical and physical settings, recognizing constraints in cloud, hybrid, on-premises, single, and multi-site environments, and knowing what environmental exclusions apply for Level 2 assessments.

CMMC-CCA Exam & CMMC-CCA Prüfungsinformationen

Die Schulungsunterlagen zur CMMC-CCA Zertifizierungsprüfung von Zertpruefung sind in der Form von PDF und Software angeboten. Sie umfassen die Fragen und Antworten zur CMMC-CCA Zertifizierungsprüfung. Sie können vielleicht auch den realen Prüfungsaufgaben hier begegnen. Alle diesen Fragen sind perfekt und wirksam. Sie können alle Cyber AB CMMC-CCA Zertifizierungsprüfungen bestehen. Die Cyber AB CMMC-CCA Zertifizierungsprüfungen von Zertpruefung umfassen alle

Planprogramme und sowie komplizierte Fragen. Die Fragen und Antworten zur Cyber AB CMMC-CCA Zertifizierungsprüfung von Zertpruefung sind die realen Herausforderungen. Sie müssen Ihre Fähigkeiten und Denkweisen entfalten.

Cyber AB Certified CMMC Assessor (CCA) Exam CMMC-CCA Prüfungsfragen mit Lösungen (Q57-Q62):

57. Frage

A company has five individual buildings in one business complex. During the assessment, the Assessment Team sees people entering and exiting the buildings and notices that none of the buildings have keypads or locks. The Assessment Team needs to determine how physical access is managed and controlled.

Which artifact BEST describes how access to these buildings is managed?

- A. Personnel Access List
- **B. Physical and Environmental Protection Policy**
- C. Identification and Authorization Plan
- D. System Security Plan (SSP)

Antwort: B

Begründung:

The Physical and Environmental Protection (PE) Policy is the governing artifact that describes how physical access to facilities and environments is managed and controlled. While the SSP provides a system- wide overview, and access lists provide details of who is authorized, it is the PE Policy that explicitly documents the physical access control measures required under CMMC.

Extract from PE.L2-3.10.1:

"Organizations must develop, document, and disseminate physical and environmental protection policies that govern how access to buildings and systems containing CUI is limited to authorized individuals." Reference: CMMC Assessment Guide - Level 2, PE.L2-3.10.1.

58. Frage

An OSC employs guards to protect the manufacturing shop where the magnetic radar-absorbing coating is manufactured. The Army uses this specific coating for a particular fleet of unmanned aerial vehicles (UAVs).

The facility is under constant surveillance with the help of HD CCTVs. Within the OSC's facilities is a Vector Network Analyzer (VNA) that measures the reflection and transmission properties of the coating over a range of frequencies. Guards protect the OSC's anechoic chamber, and anyone entering must use an iris scanner and sign a physical form detailing their name and reason for being there. At the door is a huge sign reading "Authorized Personnel Only." The OSC has implemented the following physical separation methods to secure its facilities, EXCEPT?

- A. Guards
- B. Biometric locks
- **C. Monitoring**
- D. Signage

Antwort: C

Begründung:

Comprehensive and Detailed Explanation:

Physical separation methods physically restrict access, per NIST SP 800-171 and CMMC guidance. Signage (Option A), biometric locks (Option C), and guards (Option D) directly prevent entry. Monitoring via HD CCTVs (Option B) detects and records but does not physically separate, making it a security control, not a separation method. B is the exception.

Reference:

CMMC Assessment Scope - Level 2, Section 2.2 (Physical Security), p. 4: "Physical separation includes locks and guards, not monitoring alone."

59. Frage

An Assessment Team is reviewing the scope of a CMMC assessment for an OSC. The OSC has defined a narrow security boundary for their assessment, which the Assessment Team believes may not adequately protect all sensitive information. The OSC gives reasons for this, including financial constraints, and claims that CUI is only contained within an enclave defined by the boundary. However, after inspecting the facility and interviewing employees, you determine that some assets that may process CUI

are outside the enclave.

What is the risk of the OSC defining a security boundary that is too narrow in scope for the CMMC assessment?

- A. The OSC may not have done proper due diligence to protect all sensitive information within their environment.
- B. The OSC will have more systems that need to be managed separately.
- C. The assessment will take less time to complete.
- D. The assessment will be less expensive for the contractor.

Antwort: A

Begründung:

Comprehensive and Detailed Explanation:

A narrow security boundary that excludes assets processing CUI poses a significant risk to the OSC's compliance with CMMC requirements. The CMMC Assessment Scope - Level 2 emphasizes that the scope must include all assets that process, store, or transmit CUI, and failure to do so indicates a lack of due diligence in identifying and protecting sensitive information. If assets outside the enclave handle CUI, they must be included in the scope to ensure comprehensive protection, as per NIST SP 800-171 and CMMC guidelines. A too-narrow scope could leave CUI vulnerable, undermining the OSC's security posture and potentially leading to non-compliance.

Option A is a consequence, not the primary risk. Options C and D focus on cost and time, which are secondary to the security risk identified in B. The CMMC CAP reinforces that proper scoping is critical to safeguarding CUI, making B the correct answer.

Reference:

CMMC Assessment Scope - Level 2, Section 2.1 (Scoping Guidance), p. 3: "A scope that is too narrow may fail to protect all sensitive information, indicating insufficient due diligence." CMMC Assessment Process (CAP) v1.0, Section 2.2 (Scope Validation)

60. Frage

A mid-sized company specializing in machining is preparing to bid for an upcoming DoD contract to provide machined components crucial for defense systems. As CMMC compliance will be required, the company's top executives have invited you to assess their implementation of CMMC Level 2 requirements. During your visit to their environment of operations, you discover that its production floor has several Computer Numerical Control (CNC) machines for precision machining, which are all connected to a local network for data transfer and control. The CNC machines receive design files from a central server in the company's data center and communicate with a SCADA quality control system that monitors production metrics and performance. The central server hosts the design files, which are only accessible to authorized engineers and operators and backed up in an Amazon EBS cloud instance to ensure availability across the company's multiple machining shops in different states. Furthermore, the company allows employees to upload designs to the server remotely using VPNs and virtual desktop instances. What is the BEST physical control the company can use for preventive purposes?

- A. Displaying a large banner written "Authorized Personnel Only"
- B. Installing CCTVs
- C. Using proximity card readers
- D. Locking all entrances

Antwort: C

Begründung:

Comprehensive and Detailed In-Depth Explanation:

PE.L2-3.10.1 requires "limiting physical access to systems processing CUI." Proximity card readers (A) provide active, enforceable access control, preventing unauthorized entry to the production floor and data center, per CMMC intent. CCTVs (B) monitor, not prevent; banners (C) deter but don't enforce; locking entrances (D) is vague without authentication. The guide favors card-based systems.

Extract from Official CMMC Documentation:

* CMMC Assessment Guide Level 2 (v2.0), PE.L2-3.10.1: "Use card readers for preventive physical access control."

* NIST SP 800-171A, 3.10.1: "Examine active access controls like proximity cards." Resources:

* [https://dodcio.defense.gov/Portals/0/Documents/CMMC/AG_Level2_MasterV2.](https://dodcio.defense.gov/Portals/0/Documents/CMMC/AG_Level2_MasterV2.0_FINAL_202112016_508.pdf)

0_FINAL_202112016_508.pdf

61. Frage

The Lead Assessor is reviewing the Assessment Plan to identify people for interviews regarding a specific Level 2 practice. Some OSC personnel previously interviewed provided only brief answers without meaningful verification. What can the Lead Assessor do to improve this situation going forward?

- A. Ensure and verify confidentiality and non-attribution of responses
- B. Ensure the respondents sign a non-disclosure agreement for the OSC
- C. Ensure and verify the responses map to the documented artifacts
- D. Ensure the people from the training matrix are made available

Antwort: A

Begründung:

The CMMC Assessment Process emphasizes the importance of confidentiality and non-attribution in interviews to ensure OSC personnel provide candid, accurate information. Interviewees may give shallow or evasive answers if they fear attribution. Assuring confidentiality and non-attribution improves the quality and reliability of responses.

Exact extracts:

- * "The assessment team must ensure confidentiality and non-attribution during interviews."
- * "Responses should be validated against evidence, but the quality of input depends on establishing a safe environment for candor."
- * "Non-attribution is critical to elicit detailed and honest responses." Why the other options are incorrect:
- * A: Training matrices identify who is trained, not who should be interviewed.
- * C: NDAs are not a CCA responsibility - they are contractual, not assessment requirements.
- * D: Mapping to artifacts is part of correlation after interviews, but does not solve the problem of poor interview responses.
