

Test 2V0-11.25 Online | 2V0-11.25 Test Price

DOWNLOAD the newest TestBraindump 2V0-11.25 PDF dumps from Cloud Storage for free: <https://drive.google.com/open?id=1bEC8Cc1JOpOAWqdARwlnNpulb6NIg6kp>

If you buy our Software version of the 2V0-11.25 study questions, you can enjoy the similar real exam environment for that this version has the advantage of simulating the real exam. In addition, the software version of our 2V0-11.25 learning guide is not limited to the number of the computer. As long as you use it on the Windows system, then you can enjoy the convenience of this version brings. So do not hesitate and buy our Software version of 2V0-11.25 Preparation exam, you will benefit a lot from it.

VMware 2V0-11.25 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Install, Configure, Administrate the VMware by Broadcom Solution: This section of the exam measures skills of the VMware Cloud Foundation administrator and covers the installation and configuration processes for VMware Cloud Foundation components, deploying and configuring management domains, NSX Edge Clusters, and the VMware Aria Suite Lifecycle. It assesses the ability to deploy workload domains, enable vSphere IaaS control plane, create vSphere namespaces, manage stretched clusters, and use VMware Cloud Foundation APIs. Candidates are also tested on scaling deployments, performing Day 2 operations like backup, recovery, lifecycle management, VM lifecycle management, configuring networking and storage, managing ESXi hosts, implementing encryption, and operationalizing VMware NSX, vSAN, and Aria Suite. The section is comprehensive, targeting those responsible for the ongoing administration and optimization of VMware environments.
Topic 2	<ul style="list-style-type: none">• IT Architectures, Technologies, Standards: There are no testable objectives in this section. However, this area establishes the foundational knowledge expected of cloud administrators, such as understanding basic IT infrastructure, virtualization, and cloud models. This section is relevant for cloud administrators and infrastructure engineers.
Topic 3	<ul style="list-style-type: none">• VMware by Broadcom Solution: This section of the exam measures skills of the cloud administrator and covers identifying VMware Cloud Foundation components like vSphere, vSAN, and NSX, as well as their architecture, including stretched configurations. It also assesses knowledge of requirements for implementing private cloud solutions, use cases for VMware Aria Suite components, vSphere IaaS control plane, Data Services Manager, and VMware Cloud Foundation Add-Ons. The focus is on the ability to recognize and apply the correct VMware solutions for various enterprise scenarios.

Topic 4	<ul style="list-style-type: none"> • Troubleshoot and Optimize the VMware by Broadcom Solution: This section of the exam measures skills of the cloud infrastructure support engineer and covers diagnosing and resolving technical issues related to VMware Cloud Foundation deployment and operations. It includes troubleshooting the deployment process, vSphere, networking, vSAN, SDDC Manager, and Aria Suite. The section also evaluates the ability to optimize infrastructure performance, manage resources, and ensure efficient operation, focusing on the practical aspects of maintaining and enhancing VMware Cloud Foundation environments.
Topic 5	<ul style="list-style-type: none"> • Plan and Design the VMware by Broadcom Solution: There are no testable objectives in this section. Still, it is intended for solution architects who need to plan and design VMware Cloud Foundation deployments, focusing on sizing, architecture selection, and network • storage design.

2V0-11.25 Test Price - Test 2V0-11.25 Preparation

It can be said that all the content of the 2V0-11.25 study materials are from the experts in the field of masterpieces, and these are understandable and easy to remember, so users do not have to spend a lot of time to remember and learn. It takes only a little practice on a daily basis to get the desired results. Especially in the face of some difficult problems, the user does not need to worry too much, just learn the 2V0-11.25 Study Materials provide questions and answers, you can simply pass the exam. This is a wise choice, and in the near future, after using our 2V0-11.25 training materials, you will realize your dream of a promotion and a raise, because your pay is worth the rewards.

VMware Cloud Foundation 5.2 Administrator Sample Questions (Q155-Q160):

NEW QUESTION # 155

An administrator needs to add a new cluster to an existing VI workload domain. The existing cluster in the domain is using NFS as its principal storage.

Which principal storage options are available for the new cluster?

- A. vSAN, NFS, or VMFS on Fibre Channel
- B. vSAN, NFS, VMFS on Fibre Channel, or vVols
- C. NFS only
- D. NFS or vSAN

Answer: D

Explanation:

In a VMware Cloud Foundation (VCF) environment, when adding a new cluster to an existing VI workload domain, the new cluster must use the same principal storage as the existing cluster. Since the existing cluster is using NFS, the available storage options for the new cluster would be NFS or vSAN, depending on the configuration.

NEW QUESTION # 156

An administrator can set resource limits and container defaults on a vSphere Namespace.

Which three resource limits can be set? (Choose three.)

- A. Storage
- B. Network
- C. Number of containers
- D. Memory
- E. CPU

Answer: A,D,E

Explanation:

Within a vSphere Namespace, administrators have the ability to configure resource limits to control the amount of resources that workloads can consume. According to the official VMware Cloud Foundation documentation, the three types of resource limits that can be set on a vSphere Namespace are:

CPU:The administrator can specify the maximum CPU resources that can be used within the namespace.

Memory:The administrator can define the maximum amount of memory allocated to workloads in the namespace.

Storage:The administrator can configure storage limits, specifying how much storage capacity is available to the namespace.

These resource limits are essential for managing and isolating resources across different namespaces to prevent resource contention and ensure fair resource distribution. The documentation clearly states that there is no option to set a resource limit based on the number of containers or network bandwidth within the vSphere Namespace configuration. The focus is solely on controlling CPU, memory, and storage resources.

NEW QUESTION # 157

During a routine check, an administrator observes that several VMs are reporting high memory usage in VMware Aria Operations. They need to verify if the high memory usage is due to memory contention.

What actions should be taken in VMware Aria Operations to verify this?

- A. Check the memory usage and ballooning metrics.
- **B. Analyze the storage I/O performance.**
- C. Review the CPU ready time.
- B Look at the network throughput

Answer: B

Explanation:

To verify if high memory usage is due to memory contention, the administrator should check the memory usage and ballooning metrics in VMware Aria Operations. Ballooning occurs when the hypervisor reclaims memory from a virtual machine due to memory contention, and monitoring these metrics can help identify whether the VMs are experiencing memory pressure or being forced to swap memory.

NEW QUESTION # 158

An alert in SDDC Manager indicates that the health status of the vSAN cluster is degraded.

Which tool within VMware Cloud Foundation should be used to gather detailed logs and perform in-depth troubleshooting for the vSAN issues?

- **A. Aria Operations for Logs**
- B. Aria Operations for Networks
- C. vCenter Server
- D. SDDC Manager

Answer: A

Explanation:

Aria Operations for Logs (formerly known as vRealize Log Insight) is used to collect, analyze, and troubleshoot logs from various components within VMware Cloud Foundation, including the vSAN cluster. It provides detailed insights into the logs, allowing administrators to perform in-depth troubleshooting of issues like degraded health statuses.

NEW QUESTION # 159

An administrator is troubleshooting a high CPU usage issue of the SDDC Manager VM. Access to SDDC Manager UI is exhibiting degraded performance.

What two steps should the administrator take to diagnose the issue? (Choose two.)

- A. Reconfigure the DRS settings to be more aggressive in load balancing.
- **B. Login to SDDC Manager using console with root credentials, run the top command to identify any services that may be consuming high %CPU.**
- **C. Review the CPU usage of the ESXi management domain hosts to identify any that are overcommitted.**
- D. Reboot the SDDC Manager VM to clear any temporary issues.
- E. Upgrade the vSphere version to the latest release.

Answer: B,C

Explanation:

When troubleshooting high CPU usage on the SDDC Manager VM, the recommended diagnostic steps are:

Login to SDDC Manager using console with root credentials, run the top command to identify any services that may be consuming high %CPU (B):The official documentation instructs administrators to use system monitoring commands such as top or htop within the SDDC Manager appliance to determine if specific processes or services are causing elevated CPU usage. This helps pinpoint the root cause inside the VM.

Review the CPU usage of the ESXi management domain hosts to identify any that are overcommitted (D):

High CPU usage within the SDDC Manager VM could also result from overall CPU contention on the physical ESXi hosts.

Checking host-level CPU usage can help determine if the underlying infrastructure is contributing to the performance issue. The documentation emphasizes reviewing host resource metrics to ensure the management cluster is not overcommitted.

Other options such as rebooting the VM, upgrading vSphere, or modifying DRS settings are not recommended as initial diagnostic steps according to official guidance. Rebooting or changing configurations without proper analysis may disrupt services or not address the root cause.

NEW QUESTION # 160
