## Trusted Cloud-Digital-Leader Certified & Useful Google Certification Training - Trustworthy Google Google Cloud Digital Leader

The latest Cloud-Digital-Leader exam prep is created by our IT experts and certified trainers who are dedicated to Google braindumps pdf for a long time. All questions of our Cloud-Digital-Leader PDF VCE are written based on the real questions. Besides, we always check the updating of Cloud-Digital-Leader exam questions to make sure exam preparation smoothly.

### Google Cloud Digital Leader Sample Questions (Q188-Q193):

#### NEW QUESTION # 188

You are a DevOps Engineer in an E-commerce company that sells products globally, across the countries, Customers buy products, add them to carts or check-in stock from different parts of the world with different timestamps, you need to choose a database that can scale globally without any hassle and lots of developer support, it should be consistent across regions, can scale horizontally to

support enormous user, automatically replicates, shards and even auto transaction processing. Which of the following database do you choose?

- A. Cloud Storage.
- B. Cloud Firestore.
- **C. Cloud Spanner**
- D. Cloud SQL

**Answer: C**

Explanation:

Explanation

Cloud Spanner:

Fully managed relational database with unlimited scale, strong consistency, and up to 99.999% availability.

- Get all the benefits of relational semantics and SQL with unlimited scale

- Start at any size and scale with no limits as your needs grow

- Enjoy high availability with zero scheduled downtime and online schema changes

- Deliver high-performance transactions with strong consistency across regions and continents

- Focus on innovation, eliminating manual tasks with capabilities like automatic sharding

Automatic sharding Cloud Spanner optimizes performance by automatically sharding the data based on request load and size of the data. As a result, you can spend less time worrying about how to scale your database and instead focus on scaling your business.

Strong transactional consistency

Purpose-built for external, strong, global transactional consistency.

Regional and multi-regional configurations

No matter where your users may be, apps backed by Cloud Spanner can read and write up-to-date strongly consistent data globally. Additionally, when running a multi-region instance, your database is able to survive a regional failure, and offers industry-leading 99.999% availability.

Online schema changes with no downtime

Cloud Spanner users can make a schema change, whether it's adding a column or adding an index while serving traffic with zero downtime. Hence you now have the flexibility to adapt your database to your business needs without compromising on the availability of your application.

### NEW QUESTION # 189

Your client is building a custom machine learning pipeline to identify lesions in the lungs based on x-rays.

Different teams of data scientists are sharing common source data and building many versions of ML models. Which of these Cloud Storage options would be best for them?

- A. Retain the data in use in a multi-region bucket.
- **B. Retain the data in use in a single region bucket with standard storage.**
- C. Retain the data in use in a single region bucket with nearline storage. Retain the data in use in a dual-region bucket.
- D. Retain the data in use in a dual-region bucket.

**Answer: B**

Explanation:

Integrated repository for analytics and ML: The highest level of availability and performance within a single region is ideal for compute, analytics, and machine learning workloads in a particular region. Cloud Storage is also strongly consistent, giving you confidence and accuracy in analytics workloads.

#### NEW QUESTION # 191

What according to you are NOT the key capabilities of In-App Messaging?

- A. Creating customized and flexible alerts
- B. Target messages accordingly to the change in the behavior pattern of the target audience.
- C. Increasing conversion for user-to-user sharing
- D. Sending relevant messages to the target audience

**Answer: C**

Explanation:

In-App Messaging

Engage active app users with contextual messages.

Firebase In-App Messaging helps you engage users who are actively using your app by sending them targeted and contextual messages that nudge them to complete key in-app actions - like beating a game level, buying an item, or subscribing to content.

#### NEW QUESTION # 192

Your Google Cloud Platform [GCP] admin has to manage a bunch of API keys for external services that are accessed by different applications, which are used by a few teams. What is the best way to manage them?

- A. Store the information in Secret Manager and give IAM read permissions as re-quired.
- B. Share the information in a Github repository and grant access to the repo in IAM as required.
- C. Encrypt the information and store it in Cloud Storage for centralized access. Give the decrypt key only to the users who need to access it.
- D. Store the information in Kubernetes Secrets and only grant read permissions to users as required.

**Answer: A**

Explanation:

Explanation

Store the information in Secret Manager is a secure and convenient storage system for API keys, passwords, certificates, and other sensitive data. Secret Manager provides a central place and single source of truth to manage access, and audit secrets across Google Cloud.
