SAP C_SEC_2405 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> • Governance, Compliance, and Cybersecurity: This section of the exam measures the skills of compliance officers and covers the principles of governance, compliance, and cybersecurity of SAP systems. It includes understanding regulatory requirements and best practices for maintaining security. A critical skill evaluated is ensuring organizational compliance with relevant laws and policies.
Topic 2	<ul style="list-style-type: none"> • SAP Fiori Authorizations and SAP S • 4HANA: This section of the exam measures the skills of SAP Developers and covers authorization management specific to SAP Fiori applications within SAP S • 4HANA. It emphasizes configuring authorizations for Fiori apps to ensure appropriate access levels. A key skill assessed is understanding Fiori authorization concepts to enhance user experience.

Topic 3

- User Administration: This section of the exam measures the skills of SAP Administrators and covers user administration tasks within SAP systems. It includes managing user accounts, roles, and profiles efficiently. A critical skill evaluated is maintaining accurate user records to support security and compliance efforts.

SAP Certified Associate - Security Administrator Sample Questions (Q76-Q81):

NEW QUESTION # 76

When you maintain authorizations for SAPUI5 Fiori apps, which of the following object types is the front-end authorization object type?

- A. TADIR IWSG - SAP Gateway: Service Groups Metadata
- B. TADIR IWSV - SAP Gateway Business Suite Enablement-Service
- C. TADIR INA1 InA Service
- D. TADIR G4BA-SAP Gateway Odata V4 Backend Service Group & Assignments

Answer: B

NEW QUESTION # 77

Which SU01 user types are NOT enabled for interaction? Note: There are 2 correct answers to this question.

- A. Dialog
- B. Service
- C. System
- D. Communications Data

Answer: C,D

Explanation:

In SAP systems, SU01 user types define the purpose and interaction capabilities of user accounts. The System user type is not enabled for interactive use, as it is designed for background processes, such as batch jobs or system operations, and does not support direct logon via the SAP GUI. Similarly, the Communications Data user type (often referred to as Communication User) is intended for machine-to-machine interactions, such as API calls or system integrations, and is not configured for interactive logon by human users. In contrast, Dialog users are explicitly designed for interactive access, allowing users to log on and perform tasks via the SAP GUI. Service users, while restricted, can support limited interactive access in specific scenarios, such as anonymous web services. These distinctions ensure that non-interactive processes are securely managed without exposing unnecessary access points.

NEW QUESTION # 78

What does a status text value of "Old" mean during the maintenance of authorizations for an existing role?

- A. Field values were changed as a result of the merge process.
- B. Field values were unchanged and no new authorization was added.
- C. Field values have not been changed.
- D. The field delivered with content was changed but the old value was retained.

Answer: D

Explanation:

* Context: During role maintenance in SAP, status values indicate changes or actions applied to field values.

* Solution Explanation:

* A status of "Old" means the field value was delivered with content but has since been modified, retaining the old value.

NEW QUESTION # 79

In S/4HANA on-premise, which of the following combinations is required to grant a business user access to data from a Core Data Services (CDS) view using the standard ABAP authorization concept and authorization object S_RS_AUTH?

- A. A CDS role with access conditions based on authorization object S_RS_AUTH, a PFCG role with authorization for object S_RS_AUTH and assignment of the PFCG role to the business user.
- **B. A CDS role with access conditions based on authorization object S_RS_AUTH, a PFCG role containing the CDS role and access conditions based upon authorization object S_RS_AUTH, assignment of the PFCG role to the business user.**
- C. A CDS role with access conditions based on authorization object S_RS_AUTH, a PFCG role containing the CDS role and access conditions based upon authorization object S_RS_AUTH, assignment of the PFCG role and the CDS role to the business user.
- D. A CDS role with access conditions based on authorization object S_RS_AUTH, a PFCG role with authorization for object S_RS_AUTH, assignment of the PFCG role to the business user.

Answer: B

Explanation:

To grant a business user access to data from a Core Data Services (CDS) view in SAP S/4HANA on-premise using the standard ABAP authorization concept and S_RS_AUTH, the correct combination includes a CDS role with access conditions based on S_RS_AUTH, a PFCG role containing the CDS role and access conditions based on S_RS_AUTH, and assignment of the PFCG role to the business user. The CDS role defines data access restrictions at the CDS view level, using S_RS_AUTH to enforce specific conditions, such as filtering data by organizational units. The PFCG role incorporates this CDS role and includes S_RS_AUTH authorizations, ensuring that the user's permissions align with both the CDS view's restrictions and ABAP authorization checks. Assigning only the PFCG role to the user simplifies administration, as the CDS role is embedded within it. Options A and C incorrectly suggest assigning the CDS role directly to the user, which is not standard practice, and option D omits the CDS role's integration into the PFCG role. This combination ensures secure and efficient access to CDS view data.

NEW QUESTION # 80

Which log types are available in the Administration Console of Cloud Identity Services? Note: There are 2 correct answers to this question.

- A. Performance logs
- B. Troubleshooting logs
- **C. Usage logs**
- **D. Change logs**

Answer: C,D

Explanation:

In the Administration Console of Cloud Identity Services, the following log types are available:

* Change Logs (A): These logs capture all modifications made to configurations, user data, or system settings.

* Usage Logs (D): Usage logs provide details on how the system is being utilized, including user access patterns and system resource usage.
