Nokia Data Center Fabric Fundamentals Exam Sample Questions (Q25-Q30):

NEW QUESTION # 25
Which of the following statements about next-hop groups is TRUE?

- A. The next-hop for a next-hop-group must be a local IP address.
- B. CMP destination unreachable message is always sent when blackhole is specified in the next-hop-group.
- C. A next-hop-group can only specify one next-hop for forwarding
- D. Multiple static routes can use the same next-hop-group.

Answer: D

Explanation:
Multiple static routes can share the same next-hop group, enabling efficient reuse of next-hop definitions for load balancing or redundancy.

NEW QUESTION # 26
Which of the following statements about using BFD with BGP is FALSE?

- A. BGP is notified if several BFD control packets are missed.
- B. It can help rapidly detect link failures.
- C. The BFD endpoints agree on the send/receive rate of control packets.
- D. Using BFD can speed up the BGP advertisement interval.

Answer: D

Explanation:
BFD helps detect link failures rapidly and notifies BGP to trigger route updates quickly, but it does not speed up the BGP advertisement interval itself. BGP advertisement intervals are controlled by BGP timers, not by BFD.

NEW QUESTION # 27
Based on the exhibit output, which of the following statements is TRUE?

- A. An ACL filter is configured to accept ICMP packets, which are then processed by the tcpdump-like utility.
- B. A cpm-filter is configured to accept ICMP packets, which are then captured in a log file.
- C. capture-filter is configured to copy ICMP packets to the CPM where they are processed by the tcpdump-like utility.
- D. A cpm-filter policer is configured to rate limit ICMP packets, which are then captured in a log file.

Answer: C

Explanation:
The exhibit shows ICMP packets being captured and displayed by a tcpdump-like utility, which indicates that a capture-filter is configured to copy ICMP packets to the Control Plane Manager (CPM) where they are processed and monitored.

NEW QUESTION # 28
Which of the following is NOT one of the reasons why BGP is used as the routing protocol in the data center?

- A. It is a well understood and mature routing protocol.
- B. BGP neighbors automatically discover each other.
- C. It is more efficient than link-state protocols like IS-IS and OSPF.
- D. It supports both IPv4 and IPv6.

Answer: C

Explanation:

BGP is not chosen because it is more efficient than link-state protocols; in fact, link-state protocols like IS-IS and OSPF generally provide faster convergence and more efficient route calculation. BGP is used in data centers mainly because it is mature, well understood, supports both IPv4 and IPv6, and offers flexible policy control.

NEW QUESTION # 29
A static route is configured in two steps in Nokia's SR Linux. Which of the following items CANNOT be configured in the static-routes container?

- A. Next-hop group
- B. blackhole
- C. IPv4 destination prefix
- D. Preference value

Answer: B

Explanation:
The static-routes container in Nokia SR Linux does not support configuring a blackhole route directly; it is used to configure destination prefixes, preference values, and next-hop groups for static routing.

NEW QUESTION # 30
