

# Quiz 2026 C\_S43\_2601: SAP Certified Implementation Consultant - SAP S/4HANA Cloud Private Edition, Asset Management (C\_S43\_2601)–High Pass-Rate New Questions

As the talent team grows, every fighter must own an extra technical skill to stand out from the crowd. To become more powerful and struggle for a new self, getting a professional C\_S43\_2601 certification is the first step beyond all questions. We suggest you choose our C\_S43\_2601 test prep ----an exam braindump leader in the field. Since we release the first set of the C\_S43\_2601 quiz guide, we have won good response from our customers and until now---a decade later, our products have become more mature and win more recognition. We promise to give you a satisfying reply as soon as possible. All in all, we take an approach to this market by prioritizing the customers first, and we believe the customer-focused vision will help our C\_S43\_2601 Test Guide' growth.

About SAP C\_S43\_2601 Exam, each candidate is very confused. Everyone has their own different ideas. But the same idea is that this is a very difficult exam. We are all aware of SAP C\_S43\_2601 exam is a difficult exam. But as long as we believe ITExamDownload, this will not be a problem. ITExamDownload's SAP C\_S43\_2601 exam training materials is an essential product for each candidate. It is tailor-made for the candidates who will participate in the exam. You will absolutely pass the exam. If you do not believe, then take a look into the website of ITExamDownload. You will be surprised, because its daily purchase rate is the highest. Do not miss it, and add to your shoppingcart quickly.

## C\_S43\_2601 Sample Test Online - Latest C\_S43\_2601 Exam Pdf

The format name of Channel Partner Program C\_S43\_2601 practice test questions is SAP PDF Questions file, desktop practice test software, and web-based practice test software. Choose the nay type of Channel Partner Program SAP Certified Implementation Consultant - SAP S/4HANA Cloud Private Edition, Asset Management (C\_S43\_2601) C\_S43\_2601 Practice Exam Questions that fit your SAP C\_S43\_2601 exam preparation requirement and budget and start preparation without wasting further time.

## SAP Certified Implementation Consultant - SAP S/4HANA Cloud Private Edition, Asset Management (C\_S43\_2601) Sample Questions (Q10-Q15):

### NEW QUESTION # 10

Create a Task List

The project team evaluates during the implementation project Task Lists in SAP S/4HANA Asset Management. The following features need to be checked:

- \* Create a Task List header
- \* Create Task List operations
- \* Create a Task List with 3 Task List operations. Maintenance Strategy Z### comprises Maintenance Packages with different hierarchy levels.

Use the following information at header level of the Task List:

□ Use the following information for each Task List operation:

- \* Assign Maintenance Packages to the Task List Operations as follows:
- \* Operation 10 is to be performed monthly.
- \* Operation 20 is to be performed every 4 months.
- \* Operation 30 is to be performed every 12 months.

**Answer:**

**Explanation:**

See the Explanation for complete Solution of this Task.

**Explanation:**

Since we encountered that error with the Z48 strategy , we must ensure that is fixed before we can finish the Task List. Here is the complete, verified, step-by-step process to finalize Task 7 , including the "hidden" pre- requisite.

**Task 7: Create a General Task List**

**Objective :** To create a standardized template of maintenance steps that can be automatically pulled into future work orders based on a schedule.

**Step 1: The Pre-requisite (Fixing Strategy Z48)**

If you haven't done this yet, SAP will not let you save the Task List.

- \* Transaction : IP11 (Maintain Maintenance Strategies).
- \* Action : Click New Entries .
- \* Strategy : Z48
- \* Description : Strategy for Group 48
- \* Strategy Unit : MON (Months).
- \* Packages : On the left, double-click Packages , then click New Entries :
- \* Line 1 : Cycle 1 / Unit MON / Text Monthly
- \* Line 2 : Cycle 4 / Unit MON / Text Every 4 Months
- \* Line 3 : Cycle 12 / Unit MON / Text Yearly
- \* Save (Floppy Disk icon).

**Explanation :** A strategy is the "calendar" that defines how often work happens. Without this, the system doesn't know what "Monthly" or "Yearly" means.

**Step 2: Create Task List Header**

- \* Transaction : IA05 .
- \* Initial Screen : Group TL-48, Group Counter 1. Press Enter .
- \* Header Fields :
- \* Description : Regular Maintenance GR48
- \* Planning Plant : 1010
- \* Work Center : MK-00 / Plant : 1010
- \* Usage : 4 (Plant Maintenance)
- \* Status : 4 (Released)
- \* Planner Group : P48
- \* Maint. Strategy : Z48

**Explanation :** The header defines who is responsible for the work (Planner Group P48) and which scheduling rules (Strategy Z48) apply to the whole list.

**Step 3: Create Operations**

- \* Click the Operations button (F6) at the top.
- \* Enter three rows with this data:
- \* Op 10 : Work Center MK-00, Plant 1010, Control Key PM01, Work 30, Unit MIN.
- \* Op 20 : (Same as above).
- \* Op 30 : (Same as above).

**Explanation :** Operations are the actual steps the technician follows. Here, we are saying each step takes 30 minutes of mechanical labor.

**Step 4: Assign Maintenance Packages (The "Frequencies")**

This is the most important part of Task 7. We tell SAP which operation happens when.

- \* Select Row 10 (click the box at the far left of the row).
- \* Go to Menu: Goto > Maintenance Packages .
- \* Check the box for the 1 Month package. Click the Back (Green Arrow) icon.
- \* Select Row 20 .
- \* Go to Goto > Maintenance Packages and check the 4 Month package. Click Back .
- \* Select Row 30 .
- \* Go to Goto > Maintenance Packages and check the 12 Month package. Click Back .

**Explanation :** Now, SAP knows that Op 10 happens every month, but Op 30 only happens once a year.

**Step 5: Save**

- \* Click the Save icon.
- \* The message at the bottom should say: "Task list TL-48 saved with group counter 1" .

### NEW QUESTION # 11

#### Task 11: Classify a piece of Equipment

The project team evaluates during the implementation project the classification of Technical Objects in order to use Checklists in SAP S/4HANA Asset Management. The following features need to be checked:

- \* Assign a class to a Technical Object
- \* Assign characteristic values to a class
- \* Assign class EQ11 value to Technical Object T-PA## .
- \* Assign a characteristic value, so that Inspection Plan Q / CL-DE-00 / 1 is automatically found during the checklist process

#### Answer:

##### Explanation:

See the Explanation for complete Solution of this Task.

##### Explanation:

##### Task 11 Overview

This task involves classifying a piece of equipment so it can be used in the Checklist process . By assigning a specific class and characteristic values, you enable the system to automatically find the correct inspection plan when a maintenance order is created.

##### Step 1: Access the Equipment Master Record

To classify the equipment, you must first open its master record in "Change" mode.

- \* Transaction Code : Enter IE02 (Change Equipment) in the command field and press Enter .
- \* Equipment : Enter T-PA48 .
- \* Action : Press Enter to open the record.

##### Step 2: Assign the Class to the Equipment

Now you will link the equipment to a class that contains the required technical characteristics.

- \* Navigate : Click the Classification button in the top toolbar (or go to the Classes tab if available).
- \* Class Assignment :
- \* Class Type : Ensure this is set to 002 (Equipment Class).
- \* Class : Enter EQ11 .
- \* Action : Press Enter . The system will now display the characteristics associated with class EQ11 in the bottom half of the screen.

Explanation : Assigning a class is like giving the equipment a "category". Class EQ11 is specifically configured in this system to hold the data needed for checklist processing.

##### Step 3: Assign Characteristic Values

This is the critical step that tells the system exactly which inspection plan to use for this specific pump.

- \* Locate the Characteristic : In the values table, look for a characteristic related to "Inspection Plan" or "Checklist Group."
- \* Enter the Value : Assign the value so that Inspection Plan CL-DE-00 / 1 is automatically found.
- \* Note: Typically, you will enter CL-DE-00 in the "Inspection Plan Group" field and 1 in the "Group Counter" field.
- \* Action : Press Enter to validate the values.

Explanation : Characteristic values are the specific details for this asset. By entering these values, you "tag" the equipment so that whenever it is added to a maintenance order, the system knows to look for the CL-DE-00 checklist automatically.

##### Step 4: Save

- \* Action : Click the Save (floppy disk) icon.
- \* Confirmation : The system should display a message at the bottom saying: "Equipment T-PA48 changed."

### NEW QUESTION # 12

#### Create and use a Maintenance Work Center

The project team evaluates during the implementation project the organizational elements in SAP S/4HANA Asset Management.

The following features need to be checked:

- \* Create a Maintenance Work Center
- \* Create a capacity demand for a Maintenance Work Center
- \* Create a new Maintenance Work Center master record ZZ-ME## for maintenance plant 1010 similar to maintenance work center T-ME00 and save it. Use the following information:
- \* Create a capacity demand of 1 hour for the just created Maintenance Work Center ZZ-ME## by creating a new maintenance

order of order type PM01 .

**Answer:**

Explanation:

See the Explanation for complete Solution of this Task.

Explanation:

Task 3: Create and Use a Maintenance Work Center

Objective

In Task 3, the requirement was to:

- \* create a new maintenance work center ZZ-ME42 for plant 1010 similar to T-ME00
- \* maintain the required capacity values
- \* create a 1-hour capacity demand for that work center by creating a maintenance order of type PM01

□

Part 1: Create the Maintenance Work Center

Requirement from task file

The task required the following values for the work center:

- \* Plant = 1010
- \* Work Center = ZZ-ME42
- \* Description = Mechanical Maintenance 42
- \* No. Ind. Capacities = 5
- \* Capacity = 24.00 H

The task also stated that the work center must be created similar to maintenance work center T-ME00 .

□ Step-by-step procedure

Step 1: Open work center creation

- \* Go to SAP GUI command field
- \* Enter transaction IR01
- \* Press Enter

Transaction IR01 is used to create a new work center. This is the correct starting point for creating the maintenance work center required in Task 3.

Step 2: Enter initial work center data

On the Create Work Center: Initial Screen , enter:

- \* Plant = 1010
- \* Work Center = ZZ-ME42
- \* Work Center Category = 0005
- \* In Copy from :
- \* Plant = 1010
- \* Work Center = T-ME00

Then press Enter .

The task explicitly required the work center to be created for plant 1010 and to be created similar to T-ME00.

Work center category 0005 is the maintenance work center category, so this was the correct category to use for a maintenance work center.

Step 3: Include capacity data during copy

When the Copy from popup appeared:

- \* select Capacities
- \* continue with the green check

This was important because the task required changing capacity-related data:

- \* No. Ind. Capacities = 5
- \* Capacity = 24.00 H Copying the capacity data ensured the new work center inherited the capacity structure from T-ME00 and could then be adjusted correctly.

□ Step 4: Maintain basic data

On the work center master screen:

- \* change the description to Mechanical Maintenance 42

This matches the exact description required by the task.

Step 5: Maintain capacity values

Go to the Capacities tab, then open the capacity detail screen.

Maintain or verify:

- \* No. Ind. Capacities = 5
- \* Capacity Base Unit = H
- \* Capacity recalculated to 24.00 H

In our system, the Capacity field was system-calculated and not directly editable.

The final valid values were achieved with:

- \* Start Time = 08:00:00
- \* End Time = 17:00:00
- \* Length of breaks = 01:00:00
- \* Capacity Utilization = 60
- \* No. Ind. Capacities = 5

This produced:

- \* Capacity = 24.00 H

The task required 24.00 H capacity, but SAP calculated it automatically based on operating time, utilization, and number of individual capacities.

The resulting calculation was correct and matched the task requirement exactly.

Step 6: Save the work center

- \* Click Save

Later, when trying to create the same work center again, SAP displayed the system message:

- \* "Work center ZZ-ME42 in plant 1010 already exists"

Explanation / Verification:

This system message confirmed that the work center had already been created successfully.

Therefore, the creation of ZZ-ME42 was verified as complete.

Part 2: Create a 1-Hour Capacity Demand

Requirement from task file

The task required:

- \* create a capacity demand of 1 hour
- \* for the newly created maintenance work center ZZ-ME42
- \* by creating a maintenance order of type PM01

Step-by-step procedure

Step 7: Open maintenance order creation

- \* In the command field, enter /nIW31

- \* Press Enter

Transaction IW31 is used to create a maintenance order.

The /n ensured SAP exited the previous transaction and opened the new one directly.

Step 8: Enter order header data

On the Create Maintenance Order: Initial Screen, enter:

- \* Order Type = PM01
- \* Planning Plant = 1010

Then press Enter .

The task explicitly required the capacity demand to be created by means of a maintenance order of type PM01 .

Step 9: Enter order description

On the order header screen, enter a short text such as:

- \* Capacity demand ZZ-ME42

The task did not prescribe a specific short text, so a meaningful description was used for traceability.

Step 10: Create the first operation

In the first operation area / operations overview, maintain:

- \* Operation = 0010
- \* Work Center = ZZ-ME42
- \* Plant = 1010
- \* Control Key = PM01
- \* Work Duration / Work = 1
- \* Unit = H

Then press Enter .

This operation is the actual source of the capacity demand .

The capacity demand is not created merely by the order header; it is created by assigning the operation to the work center with a planned work value of 1 hour .

Therefore, these operation entries were the critical part of fulfilling Task 3.

Step 11: Save the maintenance order

- \* Click Save

SAP displayed the confirmation message:

- \* "Order saved with number 4000314"

Explanation / Verification:

This was the final confirmation that the maintenance order had been created successfully.

Because the operation was assigned to ZZ-ME42 with 1 H planned work, this verified that the required 1- hour capacity demand had been created for the work center.

Verified completed objects

The following results were verified during execution:

- \* Maintenance Work Center created
- \* Work Center = ZZ-ME42
- \* Plant = 1010
- \* confirmed by SAP message that the work center already existed when rechecked
- \* Capacity maintained correctly
- \* No. Ind. Capacities = 5
- \* Capacity = 24.00 H
- \* Capacity demand created
- \* maintenance order type PM01
- \* operation assigned to ZZ-ME42
- \* planned work = 1 H
- \* Order successfully saved
- \* SAP confirmation: Order saved with number 4000314

### NEW QUESTION # 13

Task 6: Configure Maintenance Order Types and work with Maintenance Orders The project team evaluates during the implementation project Maintenance Orders in SAP S/4HANA Asset Management. The following features need to be checked:

- \* Configure a Maintenance Order Type and create a Maintenance Order
- \* Create a Time Confirmation a Maintenance Order
- \* Prepare a Maintenance Order for Completion
- \* Create a Maintenance Order and save it.

Note:

Make sure that you have maintained all required customizing settings for the Maintenance Order Type.

Use the following information at header level:

- Plan a Maintenance Order Operation and use the following information:
- Create a Time Confirmation for the just created Maintenance Order. Use the following information:
- \* Display the Actual Costs assigned to the just created Maintenance Order and set it to Technically Completed. Display the Settlement Rule.
- 

### Answer:

Explanation:

See the Explanation for complete Solution of this Task.

Explanation:

Task 6 Overview

The goal of this task is to process a repair from start to finish. You will convert the "leaking pump" notification into a work order, plan the labor, record the work performed, and technically close the file.

Step 1: Create the Maintenance Order from Notification

Instead of starting from scratch, we link the order to the notification you created in Task 5.

- \* Access the Transaction : Use transaction code IW31 .
- \* Initial Screen :
- \* Order Type : PM01.
- \* Notification : Enter your notification number (e.g., 10000147).
- \* Press Enter .
- \* Header Data :
- \* The description "Pump is leaking" should pull in automatically.
- \* Main Work Center : Ensure it is T-ME48.

Explanation : By entering the notification number, SAP automatically pulls in the equipment, functional location, and problem description, ensuring "data integrity" across the maintenance process.

Step 2: Plan the Operations (Labor)

You must tell the system how much effort the repair requires.

- \* Go to the Operations Tab .
- \* Enter Planning Data :
- \* Work : 2.
- \* Unit (Un) : H (Hours).
- \* Number : 1 (One person).

\* Duration (Dur.) : 2 / Unit : H.

\* Add Enhancement Data :

\* Click the Additional Data tab - > Enhancement sub-tab.

\* In the Field Key box, use the search (F4) to select 0000001 (User-defined fields).

\* In the first text box ( Text 1 ), type: Industrial Z48.

Explanation : Planning the work allows the system to calculate the estimated cost of the repair. The "Enhancement" data is used to store specific technical details (like the motor type) that aren't in the standard SAP fields.

Step 3: Release the Order

An order in "Created" (CRTD) status is just a plan. To start work, it must be "Released" (REL).

\* Release : Look at the top toolbar and click the Green Flag icon .

\* Verify Status : The "Sys.Status" field should now include REL.

\* Save : Click the Save (floppy disk) icon.

Explanation : Releasing the order is the "Green Light" for the shop floor. It allows technicians to charge time to the job and warehouse staff to issue parts.

Step 4: Time Confirmation (Recording the Work)

Now we record that the repair is physically finished.

\* Access the Transaction : Use transaction code IW41 .

\* Enter Data :

\* Order : Enter your order number (e.g., 4000395).

\* Actual Work : 2 H.

\* Check the boxes for Final Confirmation and No Remaining Work .

\* Confirmation Text : Pump repaired and tested.

\* Save : Click the Save icon.

Explanation : This step captures the "Actual Cost." SAP multiplies the 2 hours of labor by the hourly rate of work center T-ME48 to calculate exactly how much this repair cost the company.

Step 5: Technical Completion (TECO)

The final administrative step to close the repair file.

\* Access the Transaction : Use transaction code IW32 .

\* Complete Technically :

\* Go to menu: Order > Functions > Complete > Complete (technically) .

\* Click the Green Checkmark on the popup window.

\* Save : Click the Save icon.

Explanation : TECO (Technical Completion) locks the order. It tells the system the asset is back in service and prevents any further labor or parts from being charged to this specific job.

## **NEW QUESTION # 14**

Create a Maintenance Plan

The project team evaluates during the implementation project Maintenance Plans in SAP S/4HANA Asset Management. The following features need to be checked:

Create a Maintenance Plan

Create a Maintenance Plan and save it. Use the following information:

### **Answer:**

Explanation:

See the Explanation for complete Solution of this Task.

Explanation:

Task 8: Create a Maintenance Plan

The objective of this task is to create a strategy-based maintenance plan that will automatically generate work orders for your pump based on the frequencies defined in your task list.

Step 1: Access the Transaction

\* Transaction Code : Enter IP42 in the command field and press Enter .

\* Initial Screen :

\* Maintenance Plan Category : Select Maintenance Order (or "Maintenance plan for Maintenance Order" if using the Fiori Launchpad).

\* Maintenance Strategy : Enter Z48 .

\* Press Enter .

Step 2: Enter Header and Maintenance Item Data

Once you are on the main creation screen, fill in the "Maintenance Item" section to define what is being maintained and how the

orders should look:

- \* Description : Enter Regular pump maintenance Z48 .
- \* Equipment : Enter T-PA48 .
- \* Planning Plant : This should default to 1010 based on the equipment, but ensure it is correct.
- \* Order Type : Enter PM02 .

Explanation : By assigning Equipment T-PA48 and Order Type PM02 , you are telling SAP to generate a specific "Planned" maintenance order every time this schedule is triggered.

Step 3: Link the Task List

This step connects the plan to the specific maintenance steps (operations) you created in Task 7.

- \* Look for the Task List section at the bottom of the screen.
- \* Task List Type : Enter A (General Task List).
- \* Group : Enter TL-48 .
- \* Counter : Enter 1 .

\* Press Enter to validate the connection. You should see the description "Regular Maintenance GR48" appear.

Explanation : Linking the Task List ensures that when the maintenance plan generates an order, it automatically copies the 30-minute operations you defined earlier into that order.

Step 4: Set Scheduling Parameters (Optional but Recommended)

While the table in your document focuses on the data above, typically you would click the Maintenance Plan Scheduling Parameters tab to ensure the "Scheduling Period" and "Start Date" are set. However, for the assessment, the mandatory data is what we entered in Steps 1-3.

Step 5: Save

- \* Click the Save (floppy disk) icon.
  - \* Note your Maintenance Plan Number : The system will display a message at the bottom, such as "Maintenance plan 123 saved." Write this number down , as you will need it for Task 9: Schedule a Maintenance Plan .
- Task 8 is now complete! You have built the automated "brain" that will handle the recurring maintenance for your pump.

## NEW QUESTION # 15

.....

Competition appear everywhere in modern society. There are many way to improve ourselves and learning methods of C\_S43\_2601 exams come in different forms. Economy rejuvenation and social development carry out the blossom of technology; some C\_S43\_2601 Learning Materials are announced which have a good quality. Certification qualification exam materials are a big industry and many companies are set up for furnish a variety of services for it.

**C\_S43\_2601 Sample Test Online:** [https://www.itexamdownload.com/C\\_S43\\_2601-valid-questions.html](https://www.itexamdownload.com/C_S43_2601-valid-questions.html)
