Salesforce Salesforce-Data-Cloud Test Free, Sample Salesforce-Data-Cloud Questions Answers

Do you want to earn the Salesforce Data Cloud Accredited Professional Exam (Salesforce-Data-Cloud) certification to land a well-paying job or a promotion? Prepare with Salesforce-Data-Cloud real exam questions to crack the test on the first try. We offer our Salesforce-Data-Cloud Dumps in the form of a real Salesforce-Data-Cloud Questions PDF file, a web-based Salesforce Salesforce-Data-Cloud Practice Questions, and Salesforce Salesforce-Data-Cloud desktop practice test software. Now you can clear the Salesforce-Data-Cloud test in a short time without wasting time and money with actual Salesforce-Data-Cloud questions of Dumps4PDF. Our valid Salesforce-Data-Cloud dumps make the preparation easier for you.

Salesforce Data Cloud Accredited Professional Exam Sample Questions (Q148-Q153):

NEW QUESTION # 148

To import campaign members into a campaign in Salesforce CRM, a user wants to export the segment to Amazon S3. The resulting file needs to include the Salesforce CRM Campaign ID in the name.

What are two ways to achieve this outcome?

Choose 2 answers

- A. Hard code the campaign identifier as a new attribute in the campaign activation.
- **B. Include campaign identifier in the filename specification.**
- C. Include campaign identifier in the segment name.
- **D. Include campaign identifier in the activation name.**

Answer: B,D

Explanation:

The two ways to achieve this outcome are A and C. Include campaign identifier in the activation name and include campaign identifier in the filename specification. These two options allow the user to specify the Salesforce CRM Campaign ID in the name of the file that is exported to Amazon S3. The activation name and the filename specification are both configurable settings in the

activation wizard, where the user can enter the campaign identifier as a text or a variable. The activation name is used as the prefix of the filename, and the filename specification is used as the suffix of the filename. For example, if the activation name is "Campaign_123" and the filename specification is "{segmentName}_{date}", the resulting file name will be "Campaign_123_SegmentA_2023-12-18.csv". This way, the user can easily identify the file that corresponds to the campaign and import it into Salesforce CRM.

The other options are not correct. Option B is incorrect because hard coding the campaign identifier as a new attribute in the campaign activation is not possible. The campaign activation does not have any attributes, only settings. Option D is incorrect because including the campaign identifier in the segment name is not sufficient.

The segment name is not used in the filename of the exported file, unless it is specified in the filename specification. Therefore, the user will not be able to see the campaign identifier in the file name.

NEW QUESTION # 149

A customer is trying to activate data from Data Cloud to an Amazon S3 Cloud File Storage Bucket.

Which authentication type should the consultant recommend to connect to the S3 bucket from Data Cloud?

- A. Use a JWT Token generated on S3.
- B. Use an S3 Encrypted Username and Password.
- C. Use an S3 Private Key Certificate.
- **D. Use an S3 Access Key and Secret Key.**

Answer: D

Explanation:

To use the Amazon S3 Storage Connector in Data Cloud, the consultant needs to provide the S3 bucket name, region, and access key and secret key for authentication. The access key and secret key are generated by AWS and can be managed in the IAM console. The other options are not supported by the S3 Storage Connector or by Data Cloud. NEW QUESTION # 150

Which operator can be used to create a segment for a birthday campaign that is evaluated daily?

- A. Is This Year
- B. Is Between
- **C. Is Anniversary Of**
- D. Is Birthday

Answer: C

Explanation:

This operator can be used to create a segment for a birthday campaign that is evaluated daily. It compares a date attribute to the current date and returns true if they have the same month and day, regardless of the year.

NEW QUESTION # 151

What is a DMO called if it inherits the name, shape, and semantics of the reference object?

- **A. Standard DMO**
- B. Data Source Object (DSO)
- C. Custom DMO
- D. Data Lake Object (DLO)

Answer: A

Explanation:

Explanation

A Data Model Object (DMO) that inherits the name, shape, and semantics of the reference object is called a Standard DMO. A reference object is a predefined object in the Data Cloud data model that represents a common entity or concept, such as Individual, Order, or Product. A Standard DMO is a copy of a reference object that you can use to ingest data from a specific source without modifying the original reference object. A Standard DMO has the same fields and relationships as the reference object, but you can add custom fields or relationships to it if needed. References: Data Model Objects

NEW QUESTION # 152

How can attribute names be modified to match a naming convention in Cloud File Storage target?

- A. Use a formula field to update the field name in an activation
- **B. Update field names in the data model**
- C. Update attribute names in the data stream configuration
- D. Set preferred attribute names when configuring activation

Answer: B

Explanation:

You can modify the attribute names in the data model by editing the field label or API name of the corresponding field. This will change how the attribute name appears in the Cloud File Storage target. Reference: https://help.salesforce.com/s/articleView?id=sfc360_a_data_cloud_data_model.htm&type=5

NEW QUESTION # 153

.....

Our Salesforce-Data-Cloud study materials are regarded as the most excellent practice materials by authority.
