We believe that our C-SAC-2501 exam questions will help you get the certification in the shortest. So hurry to buy our C-SAC-2501 exam torrent, you will like our products.

## SAP Certified Associate - Data Analyst - SAP Analytics Cloud Sample Questions (Q20-Q25):

### NEW QUESTION # 20

You have a story based on an import model. The transaction data in the model's data source changes. How can you update the data in the model? Note: There are 2 correct answers to this question.

- A. Refresh the import job
- B. **Schedule the import**
- C. Refresh the story
- D. Allow model import

**Answer: B,C**

Explanation:

To update the data in a model based on an import connection, two main approaches can be used:

Refresh the story: This action forces SAP Analytics Cloud to reload the data for the visualizations in a story, pulling in the most recent data available in the model. This is a manual process initiated by the user.

Schedule the import: This option allows users to set up a recurring data import schedule, ensuring the model is regularly updated with the latest data from the source system. This automated process helps maintain data freshness without manual intervention.

Both methods ensure that the story reflects the most current data, accommodating changes in the transaction data of the model's data source.

### NEW QUESTION # 21

For which activities must you enable Advanced Mode in story design? Note: There are 2 correct answers to this question.

- A. Add a popup
- B. Add JavaScript to a button
- C. Add a layer to a geo map
- D. Add a custom widget

**Answer: A,B**

### NEW QUESTION # 22

Which SAP Analytics Cloud feature uses natural language processing?

- A. Smart insight
- B. Digital boardroom
- C. Just Ask feature
- D. Data analyzer

**Answer: C**

### NEW QUESTION # 23

In which types of data source can you concatenate data? Note: There are 3 correct answers to this question.

- A. Standalone dataset
- B. Data analyzer insight
- C. Live data model
- D. Embedded data set
- E. Imported data model

**Answer: A,D,E**

Explanation:

In SAP Analytics Cloud, data concatenation can be performed on Embedded datasets, Standalone datasets, and Imported data models. This process involves combining data from multiple sources or tables into a single dataset or model, providing a unified view of the data. This is particularly useful for analyses that require a comprehensive dataset compiled from various data sources.

### NEW QUESTION # 24

You want to use an input control to filter data appearing in a story. At what level is the filter applied?

- A. Component
- B. Story
- C. Page
- D. Calculation

**Answer: C**

Explanation:

When using an input control to filter data in a SAP Analytics Cloud story, the filter is applied at the Page level. This means that the selected filter criteria will affect all the components (tables, charts, etc.) on that particular page, allowing for a cohesive and consistent view of the data filtered according to the chosen parameters.
