

# Databricks Certified Data Engineer Associate Exam exam vce torrent & Databricks-Certified-Data-Engineer-Associate pdf dumps & Databricks Certified Data Engineer Associate Exam valid study prep

What's more, part of that Itcerttest Databricks-Certified-Data-Engineer-Associate dumps now are free: <https://drive.google.com/open?id=1lqIVvxHrkzZ5URK5xWlLpmfel2hMKQd0>

At present, our company has launched all kinds of Databricks-Certified-Data-Engineer-Associate study materials, which almost covers all official tests. Every Databricks-Certified-Data-Engineer-Associate exam questions are going through rigid quality check before appearing on our online stores. So you do not need to worry about trivial things and concentrate on going over our Databricks-Certified-Data-Engineer-Associate Exam Preparation. After careful preparation, you are bound to pass the Databricks-Certified-Data-Engineer-Associate exam. Just remember that all your efforts will finally pay off.

Databricks-Certified-Data-Engineer-Associate certification exam is designed to test and validate the skills and knowledge of data engineers who work with Databricks. Databricks is a cloud-based data processing and analytics platform that allows companies to process and analyze large amounts of data in real-time. Databricks Certified Data Engineer Associate Exam certification exam covers a range of topics, including data engineering, data processing, and machine learning.

## Training Databricks Databricks-Certified-Data-Engineer-Associate Online & Databricks-Certified-Data-Engineer-Associate Practice Exam

To some extent, to pass the Databricks-Certified-Data-Engineer-Associate exam means that you can get a good job. The Databricks-Certified-Data-Engineer-Associate exam materials you master will be applied to your job. The possibility to enter in big and famous companies is also raised because they need outstanding talents to serve for them. Our Databricks-Certified-Data-Engineer-Associate Test Prep is compiled elaborately and will help the client get the Databricks-Certified-Data-Engineer-Associate certification. To get a better and full understanding of our Databricks-Certified-Data-Engineer-Associate quiz torrent, you can just free download the demo of our Databricks-Certified-Data-Engineer-Associate exam questions.

Databricks Certified Data Engineer Associate exam is a comprehensive and rigorous assessment of a data engineer's proficiency in Databricks. Databricks-Certified-Data-Engineer-Associate Exam covers a wide range of topics, including Databricks architecture, data ingestion, data processing, data engineering, data storage, and data management. It is designed to test the candidate's knowledge of Databricks best practices and their ability to implement these practices in real-world scenarios.

## Databricks Certified Data Engineer Associate Exam Sample Questions (Q58-Q63):

### NEW QUESTION # 58

Calculate the total sales amount for each region and store the results in a new dataframe called `region_sales`.

Given the expected result:

Which code will generate the expected result?

- A. `region_sales = sales_df.groupby("region").agg(sum("sales_amount").alias("total_sales_amount"))`
- B. `region_sales = sales_df.groupby("category").sum("sales_amount").alias("total_sales_amount")`
- C. `region_sales = sales_df.agg(sum("sales_amount").groupby("region").alias("total_sales_amount"))`
- D. `region_sales = sales_df.sum("sales_amount").groupby("region").alias("total_sales_amount")`

**Answer: A**

### NEW QUESTION # 59

A data engineer needs to apply custom logic to string column `city` in table `stores` for a specific use case. In order to apply this custom logic at scale, the data engineer wants to create a SQL user-defined function (UDF).

Which of the following code blocks creates this SQL UDF?

- A. `UDF("city", "string")`
- B. `UDF("city", "string", "string")`
- C. `UDF("city", "string", "string", "string")`
- D. `UDF("city", "string", "string", "string", "string")`
- E. `UDF("city", "string", "string", "string", "string", "string")`

**Answer: C**

### NEW QUESTION # 60

A data engineer needs access to a table `new_table`, but they do not have the correct permissions. They can ask the table owner for permission, but they do not know who the table owner is.

Which approach can be used to identify the owner of `new_table`?

- A. There is no way to identify the owner of the table
- B. Review the Owner field in the table's page in the cloud storage solution
- C. Review the Permissions tab in the table's page in Data Explorer
- D. Review the Owner field in the table's page in Data Explorer

**Answer: D**

Explanation:

To find the owner of a table in Databricks, one can utilize the Data Explorer feature. The Data Explorer provides detailed information about various data objects, including tables. By navigating to the specific table's page in Data Explorer, a data engineer can review the Owner field, which identifies the individual or role that owns the table. This information is crucial for obtaining the necessary permissions or for any administrative actions related to the table.

### NEW QUESTION # 61

A data engineer is attempting to drop a Spark SQL table `my_table` and runs the following command:

```
DROP TABLE IF EXISTS my_table;
```

After running this command, the engineer notices that the data files and metadata files have been deleted from the file system.

Which of the following describes why all of these files were deleted?

- A. The table was external
- B. The table's data was larger than 10 GB
- C. The table's data was smaller than 10 GB
- D. The table was managed
- E. The table did not have a location

**Answer: D**

Explanation:

Explanation

managed tables files and metadata are managed by metastore and will be deleted when the table is dropped .

while external tables the metadata is stored in a external location. hence when a external table is dropped you clear off only the metadata and the files (data) remain.

### NEW QUESTION # 62

A data engineer has been given a new record of data:

id STRING = 'a1'

rank INTEGER = 6

rating FLOAT = 9.4

Which of the following SQL commands can be used to append the new record to an existing Delta table my\_table?

- A. UPDATE my\_table VALUES ('a1', 6, 9.4)
- B. INSERT VALUES ('a1', 6, 9.4) INTO my\_table
- C. UPDATE VALUES ('a1', 6, 9.4) my\_table
- D. my\_table UNION VALUES ('a1', 6, 9.4)
- E. INSERT INTO my\_table VALUES ('a1', 6, 9.4)

**Answer: E**

Explanation:

To append a new record to an existing Delta table, you can use the INSERT INTO statement with the VALUES clause. This statement will insert one or more rows into the table with the specified values.

Option A is the only code block that follows this syntax correctly. Option B is incorrect, as it uses the UNION operator, which will return a new table that is the union of two tables, not append to an existing table. Option C is incorrect, as it uses the INSERT VALUES statement, which is not a valid SQL syntax.

Option D is incorrect, as it uses the UPDATE statement, which will modify existing rows in the table, not append new rows. Option E is incorrect, as it uses the UPDATE VALUES statement, which is also not a valid SQL syntax.
