

Relativity RCA Unparalleled Interactive Questions Pass Guaranteed

RelativityOne RCA Sample Quiz fully solved with verified solutions(100% pass)

Data In and Out

What does the Preview Choices and Folders option in the Relativity Desktop (RDC) check? Select all that apply.

- The number of folders you create in the browser.
 - The number of documents that are included in each folder.
 - The number of choices you create by importing the records.
 - The order in which folders display in the workspace. - answer The number of folders you create in the browser.
- The number of choices you create by importing the records.

Data In and Out -

T/F: You can change a field's type after you create the field. - answer False

Data In and Out -

What image types can be imported into Relativity? (Select all that apply.)

- Multi-page PDFs
- Single-page JPGs

If you study with our RCA exam questions, then you are better than others, and of course you will get more opportunities. You will never be picked by others. You will become the target of business competition! This will be a happy event! You must understand what it means in this social opportunity. You can get your favorite project and get a higher salary! Our RCA simulating exam can give you more than just the success of an exam, but also the various benefits that come along with successful RCA exams.

In order to cater to different consumption needs for different customers, we have three versions for RCA exam brindumps, hence you can choose the version according to your own needs. RCA PDF version is printable, if you choose it you can take the paper one with you, and you can practice it anytime. RCA soft test engine can stimulate the test environment, and you will be familiar with the test environment by using it. RCA online test engine support all web browsers, and you can use this version in your phone.

New RCA Learning Materials, RCA Valid Study Notes

Many candidates failed exam before. They have no confidence for next exam and they also hesitate if they have to purchase valid RCA brain dumps materials or if dumps are actually valid. Now I advise you download our free demo before you are determined to buy. Our free demo is a little of the real test, you can see several questions answers and explanations. You will know the validity of Relativity RCA Brain Dumps materials.

Relativity Certified Administrator Sample Questions (Q35-Q40):

NEW QUESTION # 35

What workflow is not supported by Import/Export?

- A. Image load file import.
- B. Document load file import.
- C. Saved Search import.
- D. Unstructured data workflow with Processing.

Answer: C

Explanation:

The correct answer is D. Saved Search import. Relativity's official Import/Export workflow overview states that Import/Export supports unprocessed raw native files , document load files , image load files , production load files , and Relativity Dynamic Objects for import. On the export side, it supports folders , production sets , saved searches , and RDO files . In other words, saved searches are export workflows, not import workflows .

That distinction is important for RCA-level administration because Import/Export is organized around specific import and export pathways. A Saved Search import is not listed as a supported workflow because a saved search is a Relativity object used to define document criteria inside a workspace, not a standard external load-file-based content import. By contrast, document load file import and image load file import are explicitly supported workflows, and Relativity also supports unstructured data import for processing. Therefore, among the options given, the unsupported Import/Export workflow is Saved Search import . This is consistent with Relativity's current documentation, which shows Saved Search only under export workflows.

NEW QUESTION # 36

What production numbering should be used when reproducing documents with the same Bates numbering?

- A. Original image numbering
- B. Document field numbering
- C. Page level numbering
- D. Existing production numbering

Answer: D

Explanation:

The correct answer is D. Existing production numbering . Relativity's official production set documentation states that Existing production numbering should be selected when you want to re-use the Bates numbering fields from a previously run production set . This is the exact numbering option designed for scenarios where documents are being reproduced but must retain the same Bates values from an earlier production. Relativity further explains that this option is appropriate when you need to change the produced images, produce only a subset of documents from the existing production, or otherwise reissue the same produced documents while preserving the prior numbering.

This aligns directly with re-production workflows. Relativity's re-production documentation also notes that re- production jobs reuse the numbering format and Bates numbers from the original productions , reinforcing that the platform supports maintaining the original numbering scheme instead of assigning new Bates values. That is critical in litigation workflows where Bates continuity must be preserved for references in correspondence, court filings, and prior productions. The other options do not fit this requirement. Page level numbering and document field numbering generate or rely on other numbering methods, while original image numbering is not the production numbering choice used for preserving prior Bates values in a re- production. Therefore, when reproducing documents and keeping the same Bates numbering, the correct production numbering method is Existing production numbering .

NEW QUESTION # 37

When cancelling an Automated Workflow, how fast does the cancellation occur?

- A. After the full workflow completes
- B. After the current task completes
- C. Immediately
- D. Automated Workflows cannot be cancelled

Answer: B

Explanation:

The correct answer is B. After the current task completes. Relativity's Automated Workflows documentation states that when you click Cancel Workflow , the workflow is canceled once the currently running task is completed . The documentation is explicit that canceling the workflow does not cancel an action that is currently in progress . If you want to stop the active action itself, you must navigate to that specific object and cancel it there.

This means the cancellation is neither immediate nor delayed until the whole workflow finishes. It also means option A is false because workflows can be canceled. From an RCA administration perspective, this is important because workflow cancellation is staged: pending downstream actions are stopped, but the in-flight task is allowed to finish unless separately canceled at its own object level. Therefore, the correct answer is after the current task completes .

NEW QUESTION # 38

When using Import/Export, what happens to existing metadata fields when you select the option to overlay metadata while importing a document load file that contains several blank metadata values?

- A. Only fixed-length text fields will be overlaid with the blank values.
- **B. The blank values will replace the existing field values.**
- C. The overlay will error for each document with blank values.
- D. The existing values will remain in the corresponding mapped fields.

Answer: B

Explanation:

The correct answer is C. The blank values will replace the existing field values. Relativity's Import/Export document load file import documentation states that for Append/Overlay and Overlay Only , if a blank metadata field exists in the load file, the blank value will overlay remove any existing value in the corresponding mapped field. That means the blank value does not preserve the original value; it clears it.

This rules out the other options. The import does not preserve the old value in the mapped field, so option A is incorrect. The workflow does not error merely because blank values are present, so option B is also incorrect.

Option D is wrong because the behavior is not limited to fixed-length text fields; it is described generally for mapped metadata fields in overlay mode. Therefore, the correct answer is that blank values replace existing field values during overlay import.

NEW QUESTION # 39

What is a possible expected application installation error and solution?

- **A. Name conflicts: Rename or map Fields.**
- B. Restricted file type: Run a re-install.
- C. Installation Errors: Modify the application.
- D. Locking conflicts: Applications cannot be unlocked.

Answer: A

Explanation:

The correct answer is B. Name conflicts: Rename or map Fields. Relativity's Troubleshooting application installation errors documentation explains that for Name conflicts , the available resolution options include Rename and Map Field . The page specifically instructs admins to use the Resolve Errors drop-down and choose either Rename or Map Field to address the conflicting artifact during application installation.

The other choices are inconsistent with the documentation. For locking conflicts , Relativity says you can resolve them by selecting the Unlock checkbox, so option A is incorrect. For restricted file types , the documented resolution is to remove the external resource from the application and re-install , not simply

"run a re-install," so option D is incomplete and inaccurate. Option C is also too vague and not one of the documented named error-resolution pairings. Therefore, the correct expected application installation error and solution is Name conflicts: Rename or map Fields

NEW QUESTION # 40

.....

Do you want to obtain the RCA exam bootcamp as soon as possible? If you do, you can choose us, since our RCA exam dumps
