Actual XK0-006 CompTIA Linux+ Certification Exam Questions 2026

It is universally acknowledged that XK0-006 certification can help present you as a good master of some knowledge in certain areas, and it also serves as an embodiment in showcasing one's personal skills. However, it is easier to say so than to actually get the XK0-006 certification. We have to understand that not everyone is good at self-learning and self-discipline, and thus many people need outside help to cultivate good study habits, especially those who have trouble in following a timetable. To handle this, our XK0-006 Study Materials will provide you with a well-rounded service so that you will not lag behind and finish your daily task step by step.

CompTIA Linux+ Certification Exam Sample Questions (Q13-Q18):

NEW QUESTION # 13

A Linux server is not starting up because files in the /boot/partition are corrupt. After the initial GRUB screen, the following message is displayed:

Probing EDD (edd=off to disable)... ok

uncompression error

--system halted

Which of the following steps should the Linux administrator take to recover the system without destroying the existing installation? (Choose two.)

- A. Reinstall the OS.
- B. Start up the system using rescue boot media.
- C. Reinstall the kernel packages.

- D. Start up in single-user mode.
- E. Increase the amount of swap memory.
- F. Replace the hard drive.

Answer: B,C

Explanation:

Using rescue boot media lets you boot the machine, mount the existing partitions, and access the corrupted /boot files without reinstalling the OS.

Reinstalling the kernel packages restores the missing or corrupt files in /boot (e.g., vmlinuz and initramfs), allowing GRUB to load and uncompress the kernel properly.

NEW QUESTION # 14

Which of the following describes PEP 8?

- **A. The style guide for Python code**
- B. A Python variable holding octal values
- C. Python virtual environments
- D. A package installer for Python

Answer: A

Explanation:

Python scripting is part of Linux automation, and Linux+ V8 includes knowledge of Python development standards. PEP 8 stands for Python Enhancement Proposal 8 and defines the official style guide for Python code.

PEP 8 provides conventions for code layout, indentation, naming, line length, whitespace usage, and commenting. Its purpose is to improve code readability and maintainability, especially in collaborative environments. Linux+ V8 emphasizes that standardized coding practices are critical in automation and DevOps workflows.

The other options are incorrect. Python virtual environments are managed using tools such as venv. Package installation is handled by pip. Octal values are represented using specific syntax and are unrelated to PEP 8.

Therefore, the correct answer is A.

NEW QUESTION # 15

Following the completion of monthly server patching, a Linux administrator receives reports that a critical application is not functioning. Which of the following commands should help the administrator determine which packages were installed?

- A. dnf info
- **B. dnf history**
- C. dnf list
- D. dnf search

Answer: B

Explanation:

Package management troubleshooting is a critical Linux administration skill addressed in CompTIA Linux+ V8. After system patching, identifying which packages were installed, updated, or removed is often the first step in diagnosing application failures.

The dnf history command is specifically designed for this purpose. It displays a chronological list of all DNF transactions, including installations, upgrades, downgrades, and removals. Each transaction is assigned an ID and includes timestamps, affected packages, and actions taken. This allows administrators to correlate application failures with recent changes.

Option A is correct because it provides historical context rather than just current package state. Linux+ V8 documentation highlights dnf history as an essential auditing and rollback tool.

The other options are insufficient. dnf list shows installed or available packages but does not indicate when they were installed. dnf info displays metadata for a specific package but does not show transaction history.

dnf search is used to find packages by name or description.

By reviewing recent transactions with dnf history, administrators can quickly identify problematic updates and take corrective action, such as rolling back a package.

Therefore, the correct answer is A.

NEW QUESTION # 16

Customers are unable to send emails to a company's domain. When searching the naming service, they receive the following error message:

Which of the following is a valid reason for this error?

- A. The dig command fails because of an extra mx at the end.
- B. The root name servers were configured improperly.
- C. The name entry does not exist.
- **D. The queried DNS server is not responding.**

Answer: D

Explanation:

The error "connection timed out; no servers could be reached" indicates that the specified DNS server (ns1.mydomain.com) did not respond to the query. This points to a DNS server availability or connectivity issue, not a problem with the command syntax or record existence.

NEW QUESTION # 17

A Linux administrator needs to securely erase the contents of a hard disk. Which of the following commands is the best for this task?

- A. `sudo dd if=/dev/null of=/dev/sda1`
- B. `sudo parted rm /dev/sda1`
- **C. `sudo shred /dev/sda1`**
- D. `sudo rm -rf /dev/sda1`

Answer: C

Explanation:

The shred command securely erases data by overwriting the specified device or file multiple times, making recovery nearly impossible. This is the best option for securely erasing a hard disk.

NEW QUESTION # 18

.....

If you have been very panic sitting in the examination room, our XK0-006 actual exam allows you to pass the exam more calmly and calmly. After you use our products, our XK0-006 study materials will provide you with a real test environment before the XK0-006 Exam. After the simulation, you will have a clearer understanding of the exam environment, examination process, and exam outline. And our XK0-006 learning guide will be your best choice.
