

Reliable Agentforce-Specialist Braindumps Sheet & New Agentforce-Specialist Exam Format

SAP C- S4CPS-2202 SAP Certified Application Associate - SAP S/4HANA Cloud (public) - Professional Services Implementation 3

Answer: A,D,E

NEW QUESTION 28

You are reviewing the Open Resource Requests KPI card in the Fiori app Resource Management for Projects. What are the possible urgency groupings? Note: There are 2 correct Answers to this question.

- A. Very High
- B. Upcoming
- C. Overdue
- D. Critical

Answer: A,C

NEW QUESTION 29

Based on the SAP Activate methodology, which activities must you perform in the Explore phase? Note: There are 2 correct Answers to this question.

- A. Use the Quality system to demonstrate SAP Best Practices processes
- B. Configure the organizational structure and chart of accounts in the system
- C. Conduct the Fit-to-Standard workshops to enable customers and identify gaps
- D. Use the Starter system to demonstrate SAP Best Practices processes

Answer: C,D

NEW QUESTION 30

Which activities can you execute in the Maintain Business Roles SAP Fiori app? Note: There are 2 correct Answers to this question.

- A. Maintain catalog roles
- B. Assign authorization profiles to a business role
- C. Maintain restrictions
- D. Assign business catalogs to a business role

Answer: B,D

What's more, part of that DumpsActual Agentforce-Specialist dumps now are free: <https://drive.google.com/open?id=1XxlsdtSeONoZ7zkHgsU8QY9b5NYDnZ6E>

All the DumpsActual Salesforce Agentforce-Specialist practice questions are real and based on actual Salesforce Certified Agentforce Specialist (Agentforce-Specialist) exam topics. The web-based Salesforce Certified Agentforce Specialist (Agentforce-Specialist) practice test is compatible with all operating systems like Mac, IOS, Android, and Windows. Because of its browser-based Salesforce Agentforce-Specialist Practice Exam, it requires no installation to proceed further. Similarly, Chrome, IE, Firefox, Opera, Safari, and all the major browsers support the Salesforce Certified Agentforce Specialist (Agentforce-Specialist) practice test.

There is no another great way to pass the Salesforce Agentforce-Specialist exam in the first attempt only by doing a selective study with valid Agentforce-Specialist braindumps. If you already have a job and you are searching for the best way to improve your current Agentforce-Specialist test situation, then you should consider the Agentforce-Specialist Exam Dumps. By using our updated Agentforce-Specialist products, you will be able to get reliable and relative Agentforce-Specialist exam prep questions, so you can pass the exam easily. You can get one-year free Agentforce-Specialist exam updates from the date of purchase.

Salesforce Agentforce-Specialist Exam | Reliable Agentforce-Specialist

Braindumps Sheet - Latest updated of New Agentforce-Specialist Exam Format

If you are looking for the latest updated questions and correct answers for Salesforce Agentforce-Specialist exam, yes, you are in the right place. Our site is working on providing most helpful the real test questions answer in IT certification exams many years especially for Agentforce-Specialist. Good site provide 100% real test exam materials to help you clear exam surely. If you find some mistakes in other sites, you will know how the important the site have certain power. Choosing good Agentforce-Specialist exam materials, we will be your only option.

Salesforce Certified Agentforce Specialist Sample Questions (Q21-Q26):

NEW QUESTION # 21

How does Secure Data Retrieval ensure that only authorized users can access necessary Salesforce data for dynamic grounding?

- A. Retrieves Salesforce data based on the 'Run As' users permissions.
- B. Retrieves Salesforces data based on the Prompt template's object permissions.
- C. Retrieves Salesforce data based on the user's permissions executing the prompt.

Answer: C

Explanation:

Secure Data Retrieval enforces Salesforce's security model by dynamically grounding data access in the permissions of the user executing the prompt. This ensures compliance with CRUD (Create, Read, Update, Delete) and FLS (Field-Level Security) settings, preventing unauthorized access to sensitive data. For example, if a user lacks access to a specific object or field, the AI model cannot retrieve it for dynamic grounding.

* "Run As" user permissions (A) would bypass user-specific security, posing a compliance risk.

* Prompt template permissions (C) are not a Salesforce security mechanism; access is always tied to the user's profile and sharing settings.

NEW QUESTION # 22

Universal Containers needs a tool that can analyze voice and video call records to provide insights on competitor mentions, coaching opportunities, and other key information. The goal is to enhance the team's performance by identifying areas for improvement and competitive intelligence.

Which feature provides insights about competitor mentions and coaching opportunities?

- A. Call Explorer
- B. Einstein Sales Insights
- C. Call Summaries

Answer: A

Explanation:

For analyzing voice and video call records to gain insights into competitor mentions, coaching opportunities, and other key information, Call Explorer is the most suitable feature. Call Explorer, a part of Einstein Conversation Insights, enables sales teams to analyze calls, detect patterns, and identify areas where improvements can be made. It uses natural language processing (NLP) to extract insights, including competitor mentions and moments for coaching. These insights are vital for improving sales performance by providing a clear understanding of the interactions during calls.

* Call Summaries offer a quick overview of a call but do not delve deep into competitor mentions or coaching insights.

* Einstein Sales Insights focuses more on pipeline and forecasting insights rather than call-based analysis.

NEW QUESTION # 23

Universal Containers (UC) wants to use Flow to bring data from unified Data Cloud objects to prompt templates.

Which type of flow should UC use?

- A. Template-triggered prompt flow

- B. Unified-object linking flow
- C. Data Cloud-triggered flow

Answer: A

Explanation:

In this scenario, Universal Containers wants to bring data from unified Data Cloud objects into prompt templates, and the best way to do that is through a Data Cloud-triggered flow. This type of flow is specifically designed to trigger actions based on data changes within Salesforce Data Cloud objects.

Data Cloud-triggered flows can listen for changes in the unified data model and automatically bring relevant data into the system, making it available for prompt templates. This ensures that the data is both real-time and up-to-date when used in generative AI contexts.

For more detailed guidance, refer to Salesforce documentation on Data Cloud-triggered flows and Data Cloud integrations with generative AI solutions.

NEW QUESTION # 24

Universal Containers (UC) wants to implement an AI-powered customer service agent that can:

- * Retrieve proprietary policy documents that are stored as PDFs.
- * Ensure responses are grounded in approved company data, not generic LLM knowledge. What should UC do first?

- A. Expand the AI agent's scope to search all Salesforce records.
- B. Add the files to the content, and then select the data library option.
- **C. Set up an Agentforce Data Library for AI retrieval of policy documents.**

Answer: C

Explanation:

To implement an AI-powered customer service agent that retrieves proprietary policy documents (stored as PDFs) and ensures responses are grounded in approved company data, UC must first establish a foundation for the AI to access and use this data. The Agentforce Data Library (Option A) is the correct starting point.

A Data Library allows UC to upload PDFs containing policy documents, index them into Salesforce Data Cloud's vector database, and make them available for AI retrieval. This setup ensures the agent can perform Retrieval-Augmented Generation (RAG), grounding its responses in the specific, approved content from the PDFs rather than relying on generic LLM knowledge, directly meeting UC's requirements.

* Option B: Expanding the AI agent's scope to search all Salesforce records is too broad and unnecessary at this stage. The requirement focuses on PDFs with policy documents, not all Salesforce data (e.g., cases, accounts), making this premature and irrelevant as a first step.

* Option C: "Add the files to the content, and then select the data library option" is vague and not a precise process in Agentforce. While uploading files is part of setting up a Data Library, the phrasing suggests adding files to Salesforce Content (e.g., ContentDocument) without indexing, which doesn't enable AI retrieval. Setting up the Data Library (A) encompasses the full process correctly.

* Option A: This is the foundational step—creating a Data Library ensures the PDFs are uploaded, indexed, and retrievable by the agent, fulfilling both retrieval and grounding needs.

Option A is the correct first step for UC to achieve its goals.

:

Salesforce Agentforce Documentation: "Set Up a Data Library" (Salesforce Help: https://help.salesforce.com/s/articleView?id=sf.agentforce_data_library.htm&type=5)

NEW QUESTION # 25

Universal Containers wants to implement a customer verification process where sensitive account information can only be accessed after the customer passes identity verification. The agent must enforce this security rule deterministically without allowing the large language model (LLM) to bypass the verification requirement.

What should an Agentforce Specialist recommend as the best solution?

- A. Include detailed verification instructions in the agent's topic instructions explaining when customers should be verified and rely on the LLM to follow these guidelines consistently across all interactions.
- **B. Create a custom variable IsCustomerVerified set by a verification action, then apply a conditional filter using the expression**

IsCustomerVerified equals true to all sensitive data actions, ensuring deterministic access control that the LLM can't alter.

- C. Use context variables to store verification status in the messaging session and configure the agent to check these variables through natural language prompts during each sensitive action.

Answer: B

Explanation:

The AgentForce Security and Deterministic Logic Guide specifies that sensitive actions must be gated through conditional filters linked to verification variables, not through natural language. It states: "For any process requiring secure, deterministic access, create a custom variable (e.g., IsCustomerVerified) that stores the verification status as a Boolean. Apply a filter expression to all protected actions (e.g., IsCustomerVerified

= true). This ensures the LLM cannot bypass or alter access logic."

This configuration ensures security and determinism because the execution of sensitive actions is programmatically enforced, not dependent on the LLM's understanding.

Option A is incorrect because natural language-based checks are non-deterministic.

Option B relies solely on topic instructions, which can be ignored or misinterpreted by the LLM.

Therefore, Option C is the only solution that provides deterministic, system-enforced access control.
