## **Huawei HCIP-Access V2.5 Sample Questions (Q96-Q101):**

### **NEW QUESTION # 96**

(Radio) When configuring multicast services on MA5600T/MA5680T, the programs of multicast VLANs are statically configured. Which of the following must be configured, otherwise the multicast programs may not be able to be watched?

- A. igmp program
- B. igmp profile
- C. igmp priority
- D. igmp preview

**Answer: A**

Explanation:

On Huawei OLTs (e.g., MA5600T/MA5680T), deploying IPTV/multicast commonly uses a program list (channel list) to map program numbers to multicast group addresses-this is configured with igmp program.

When programs are statically configured under the multicast VLAN, the program definitions themselves are mandatory; without them, set-top boxes cannot select (zap to) channels by program number/address mapping and the OLT cannot correctly forward the requested multicast streams.

#### NEW QUESTION # 97

Compared with Type C dual-homing protection, which of the following statements about Type C single-homing protection are correct?

- A. Protects important services such as enterprise and base station private line access services.
- B. The networking is simple, and the OLT and ONU management is simple.
- C. When the OLT or uplink of the OLT is faulty, services can be switched to the other OLT.
- D. If the OLT is faulty, services are interrupted.

**Answer: B,D**

Explanation:

Type C dual-homing provides device-level protection with two OLTs; when one OLT/uplink fails, services switch to the peer OLT. In single-homing, ONUs are associated with only one OLT; therefore an OLT failure interrupts services (C). Single-homing has simpler networking and management than dual-homing (D). It does not offer switchover to another OLT (so B is incorrect), and the "important-service" positioning in A is typically applied to dual-homing scenarios that require the highest availability.

#### NEW QUESTION # 98

After anti-DoS attack is configured, the system periodically checks all the user ports on the board. If the system detects attacks for multiple consecutive times, the system adds the corresponding port to the blacklist and waits for a random period before a new round of detection to determine whether to remove the port from the blacklist.

- A. TRUE
- B. FALSE

**Answer: A**

#### NEW QUESTION # 99

In the upstream direction of the OLT, link aggregation can be used to improve bandwidth and reliability. Which OLT uplink aggregation modes are supported?

- A. Dynamic
- B. Automatic
- C. Static
- D. Manual

**Answer: A,C**

Explanation:

Huawei OLTs support Eth-Trunk (link aggregation) with two standard modes: Static aggregation and Dynamic aggregation (LACP). These provide bandwidth expansion and redundancy on NNI uplinks.

"Automatic" is not a defined mode; and "manual" is not used as a separate mode name in OLT Eth-Trunk configuration.

### NEW QUESTION # 100

(Radio) The following options, regarding the description of the H.248 connection model, are correct?

- A. When the user call is successful, the empty connection starts to be created
- B. The connection model cannot be modified during a user session
- C. When the session between the two users ends, the corresponding association is used
- D. A media gateway that supports only point-to-point connections can allow three or more endpoints to exist in the -- association at the same time

Answer: C
