## Reliable Analytics-DA-201 Test Cram, Pass Analytics-DA-201 Guarantee

When it comes to buying something online (for example, Analytics-DA-201 exam torrent), people who are concerned with privacy protection are often concerned about their personal information during the purchase process. However, we ensure that we have provided you with an appropriate procurement process and the personal information of customer who using our Analytics-DA-201 test prep will be securely protected. In order to ensure the security of client information, our company hired many experts to design a

secure procurement process for our Analytics-DA-201 Test Prep. If you decide to purchase our Analytics-DA-201 quiz guide, you can download the app of our products with no worry. Our Analytics-DA-201 exam torrent is absolutely safe and virus-free.

## Salesforce Analytics-DA-201 Exam Syllabus Topics:

| Topic | Details |
|-------|---------|
| Topic 1 | • SAP Clean Core Extensibility and ABAP Cloud: This part of the exam targets the SAP S<br>• 4HANA Technical Consultant and covers concepts of clean core extensibility using ABAP in the cloud. The focus is on in-app and side-by-side extensibility techniques, ensuring that custom code complies with cloud-readiness principles and does not compromise the upgrade stability of core systems. |
| Topic 2 | • ABAP SQL and Code Pushdown: This section of the exam measures the competencies of the SAP ABAP Cloud Developer related to performance optimization through ABAP SQL and code pushdown techniques. It ensures that the developer understands how to shift logic to the database layer using efficient SQL scripting to enhance performance in data-intensive applications. |
| Topic 3 | • Object-Oriented Design: This section of the exam evaluates the SAP ABAP Cloud Developer's understanding of object-oriented principles in the ABAP context. It focuses on class-based programming, inheritance, interfaces, and polymorphism, all crucial for building modular and maintainable ABAP cloud applications. |
| Topic 4 | • ABAP RESTful Application Programming Model: This section of the exam evaluates the capabilities of the SAP S<br>• 4HANA Technical Consultant in using the ABAP RESTful Application Programming Model (RAP). It focuses on understanding the structure and components of RAP, including behavior definitions, service bindings, and metadata extension. The goal is to validate the ability to develop modern and scalable applications using RAP. |

## Salesforce Certified Tableau Data Analyst Sample Questions (Q170-Q175):

**NEW QUESTION # 170**
A Data Analyst has the following dataset.

The analyst wants to create a parameter to dynamically filter the data to produce the following results based on quantity being above X value.

Which two types of parameters should the analyst use to produce the results? (Choose two)

- A. Integer
- B. Float
- C. Boolean
- D. Date

**Answer: A,B**

**NEW QUESTION # 171**
You have a data set that contains three columns named Sales, Profit, and Quantity.
You need to build the following scatter plot.

**Answer:**

Explanation:

Explanation:
To build the scatter plot shown in the image, you need to place the Profit measure on the Rows shelf and the Sales measure on the

Columns shelf. This will create a Cartesian chart with Profit as the y-axis and Sales as the x-axis. Then, you need to change the mark type to Circle on the Marks card. This will display the data points as circles that vary in size according to the Quantity measure. You can also add color or shape encoding to the marks to show additional dimensions or measures in the view. References:
* Build a Scatter Plot
* Understanding and Using Scatter Plots
* Scatter plot in Tableau

**NEW QUESTION # 172**

You have a data source that contains the following columns.

| Name | Data type |
|------|-----------|
| Order Date | Date |
| Order Number | String |
| Customer Name | String |
| Sales | Number (decimal) |
| Profit | Number (decimal) |

You want to sort customers based on the most expensive orders.

How should you complete the formula? (Use the dropdowns in the Answer Area to select the correct options to complete the formula.)

**Answer:**

Explanation:

Explanation:

WINDOW_MAX ▼ ( SUM ▼ ([Sales]), ASC ▼ )

**NEW QUESTION # 173**

You have a blank dashboard.

You want to add two sheets to the dashboard. The sheets must support the Show/Hide button.

To which two objects can you add the sheets? (Click the two appropriate Options in the Answer Area.)

**Answer:**

Explanation:
To add two sheets to the dashboard that support the Show/Hide button, you can add them to either a horizontal or a vertical container. A container is an object that can hold one or more sheets or other objects and allow you to arrange them in a layout. A Show/Hide button is a feature that lets you hide or show a container and its contents on the dashboard. You can add a Show/Hide button to any container, whether it is tiled or floating, by using the drop-down menu of the container and selecting "Add Show/Hide Button." You can also customize the appearance and behavior of the button.
To add a horizontal or a vertical container to the dashboard, you can drag them from the Objects pane to the dashboard. A horizontal container will arrange the sheets or objects horizontally, while a vertical container will arrange them vertically. You can then drag the sheets you want to add from the Sheets pane to the container. You can resize and reorder the sheets or objects within the container by using the handles and arrows.
The other objects in the Answer Area, such as text, image, web page, blank, navigation, download, and extension, do not support the Show/Hide button. They are either static elements that cannot hold other objects, or dynamic elements that require user interaction or external sources. You can add them to the dashboard as well, but they will not have the same functionality as a container with a Show/Hide button.

Layout Containers - Tableau

## NEW QUESTION # 174
You want to create the following table in a view.

Which function should you use to create the Position column?

- A. RANK
- B. FIRST
- C. INDKX
- D. LAST

**Answer: B**

Explanation:
To create the Position column, you should use the FIRST () function. The FIRST () function returns the number of rows from the current row to the first row in the partition. For example, the first row in a partition will return 0, the second row will return -1, and so on. In this question, the partition is defined by the Segment field, and the table is sorted by the Sales field in descending order. Therefore, the Position column shows the offset of each row from the first row in each segment, based on the sales ranking.
