## VCE EMEA-Advanced-Support Exam Simulator - Certification EMEA-Advanced-Support Exam Cost

Not only that our EMEA-Advanced-Support exam questions can help you pass the exam easily and smoothly for sure and at the same time you will find that the EMEA-Advanced-Support guide materials are valuable, but knowledge is priceless. These professional knowledge will become a springboard for your career, help you get the favor of your boss, and make your career reach it is peak. What are you waiting for? Come and take EMEA-Advanced-Support Preparation questions home.

## Fortinet EMEA Advanced Support Exam Sample Questions (Q12-Q17):

### NEW QUESTION # 12

Which protocols are used by an email client to retrieve emails?

- A. POP3
- B. SMTP
- C. IMAP4
- D. SNMP

**Answer: A,C**

**Explanation:**

Email clients use POP3 (Post Office Protocol) and IMAP4 (Internet Message Access Protocol) to retrieve emails from a server. POP3 downloads emails and typically removes them from the server, while IMAP4 allows synchronized access. SMTP is used for sending emails, and SNMP is for network monitoring, not email retrieval. Exact extract: "Email clients use POP3 or IMAP to

retrieve email messages from a mail server... IMAP allows users to access and manage email directly on the server, while POP3 typically downloads messages to the client."

### NEW QUESTION # 13

In Active FTP who sends the PORT command?

- A. There is no PORT command in Active FTP
- **B. The FTP Client**
- C. Both
- D. The FTP Server

**Answer: B**

Explanation:

In Active FTP, the client sends the PORT command to the server, specifying an ephemeral port for the server to initiate the data connection back to the client. This distinguishes Active FTP from Passive FTP, where the server provides the port. The server does not send PORT, and the command is a key part of Active FTP. Exact extract: "In Active FTP, the client sends a PORT command to the server, specifying the IP address and port number for the data connection... The server then initiates the data connection to the client's specified port."

### NEW QUESTION # 14

What are source and destination MAC addresses of an ARP request?

- A. The source MAC is that of the sending device and the destination of the targeted device
- B. The source MAC is that of the sending device and the destination is a multicast address
- C. The source MAC is that of the forwarding switch and destination of the targeted device
- **D. The source MAC is that of the sending device and the destination MAC is a broadcast address**

**Answer: D**

Explanation:

An ARP (Address Resolution Protocol) request is broadcast to resolve an IP address to a MAC address. The source MAC is the sender's MAC address, and the destination MAC is the broadcast address (FF:FF:FF:FF:FF:FF) to reach all devices on the local network. Fortinet devices handle ARP for Layer 2 communication. Options B, C, and D are incorrect as switches don't originate ARP requests, the target's MAC is unknown, and ARP uses broadcast, not multicast. Exact extract: "In an ARP request, the source MAC address is that of the sending device, and the destination MAC address is the broadcast address (FF:FF:FF:FF:FF:FF), sent to all devices in the local network segment."

### NEW QUESTION # 15

TCP protocol can be used for data delivery via multicast

- A. Yes
- **B. No**

**Answer: B**

Explanation:

TCP is a unicast, connection-oriented protocol that ensures reliable data delivery between two endpoints using sequence numbers and acknowledgments. Multicast, which sends data to multiple recipients, is supported by UDP, not TCP, due to TCP's requirement for a direct connection. Fortinet devices handle multicast traffic via UDP-based protocols like IGMP or PIM. Exact extract: "TCP is a unicast protocol that establishes a reliable connection between two devices... Multicast traffic, such as streaming or group communications, relies on UDP, as TCP does not support multicast delivery."

### NEW QUESTION # 16

What does the FortiGate 'set nat enable' command do in a firewall policy?

- A. Enables NAT for outgoing traffic
- B. Disables NAT for the policy
- C. Enables NAT for incoming traffic only
- D. Forces NAT to use a specific IP pool

**Answer: A**

Explanation:

The 'set nat enable' command in a FortiGate firewall policy enables Source NAT (SNAT) for outgoing traffic, typically rewriting the source IP to the FortiGate's interface IP or an IP pool. It does not disable NAT (B), force a specific pool (C), or limit to incoming traffic (D). Exact extract: "The 'set nat enable' command in a firewall policy enables Source NAT, rewriting the source IP address of outgoing traffic to the egress interface IP or a configured NAT pool."

## NEW QUESTION # 17

.....

TopExamCollection's Fortinet EMEA Advanced Support Exam (EMEA-Advanced-Support) exam questions contain Fortinet EMEA-Advanced-Support real questions and answers that have been compiled and verified by Fortinet specialists in the field. This demonstrates that the real questions and answers in the Fortinet EMEA Advanced Support Exam (EMEA-Advanced-Support) material are legitimate for the Fortinet EMEA Advanced Support Exam (EMEA-Advanced-Support) practice exam. The Fortinet EMEA-Advanced-Support practice questions are intended to help you easily and confidently clear the Fortinet EMEA Advanced Support Exam (EMEA-Advanced-Support).
