

# Salesforce Analytics-Admn-201 Latest Exam Notes - Real Analytics-Admn-201 Testing Environment

DOWNLOAD the newest PrepAwayPDF Analytics-Admn-201 PDF dumps from Cloud Storage for free:  
[https://drive.google.com/open?id=1gD8GymphtAoV96l22unBsTkfej3\\_uo6](https://drive.google.com/open?id=1gD8GymphtAoV96l22unBsTkfej3_uo6)

We will definitely not live up to the trust of users in our Analytics-Admn-201 study materials. As you know, the users of our Analytics-Admn-201 exam questions are all over the world. We have also been demanding ourselves with the highest international standards to support our Analytics-Admn-201 training guide in every aspect. First of all, our system is very advanced and will not let your information leak out. It is totally safe to visit our website and buy our Analytics-Admn-201 learning prep. You won't worry anything with our services.

Our Salesforce Certified Tableau Server Administrator (Analytics-Admn-201) PDF format is user-friendly and accessible on any smart device, allowing applicants to study from anywhere at any time. We have included actual and updated Salesforce Analytics-Admn-201 questions in this Salesforce Certified Tableau Server Administrator (Analytics-Admn-201) Dumps PDF file. Our Salesforce Certified Tableau Server Administrator (Analytics-Admn-201) exam dumps PDF format is designed to help individuals acquire the knowledge necessary to succeed in the test.

## Customizable Practice Test for Improved Success in Salesforce Analytics-Admn-201 Certification Exam

In order to gain more competitive advantages when you are going for a job interview, more and more people have been longing to get a Analytics-Admn-201 certification. They think the certification is the embodiment of their ability; they are already convinced that getting a Analytics-Admn-201 certification can help them look for a better job. There is no doubt that it is very difficult for most people to pass the exam and have the certification easily. If you are also weighted with the trouble about a Analytics-Admn-201 Certification, we are willing to soothe your trouble and comfort you.

### Salesforce Analytics-Admn-201 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> <li>Migration &amp; Upgrade: This section of the exam measures the skills of System Engineers and covers the process of upgrading and migrating Tableau Server environments. Candidates should understand how to carry out clean reinstalls, migrate servers to new hardware, and maintain backward compatibility during the process.</li> </ul>

Topic 2	<ul style="list-style-type: none"> <li>• <b>Administration:</b> This section of the exam measures the skills of Tableau Administrators and covers the day-to-day tasks of maintaining Tableau Server. Candidates should understand how to create and manage schedules, subscriptions, backups, and restores, as well as how to use tools such as TSM, Tabcmd, and REST API. It emphasizes monitoring, server analysis, log file usage, and embedding practices. It also includes managing projects, sites, and nested structures, while contrasting end-user and administrator abilities. Knowledge of publishing, web authoring, sharing views, caching, and data source certification is also tested.</li> </ul>
Topic 3	<ul style="list-style-type: none"> <li>• <b>Connecting to and Preparing Data:</b> This section of the exam measures the skills of Tableau Administrators and covers the basic understanding of Tableau Server's interface, navigation, and overall topology. Candidates are expected to recognize both client and server components, understand how these interact, and know where to find information about versions, releases, and updates. It also focuses on system requirements, including hardware, operating systems, browsers, email configurations, cloud considerations, and licensing models. Additionally, it examines knowledge of server processes, data source types, network infrastructure, and ports needed for a stable deployment.</li> </ul>
Topic 4	<ul style="list-style-type: none"> <li>• <b>Troubleshooting:</b> This section of the exam measures the skills of Support Specialists and covers resolving common Tableau Server issues. Candidates must know how to reset accounts, package logs, validate site resources, rebuild search indexes, and use analysis reports. It also includes understanding the role of browser cookies and creating support requests when needed.</li> </ul>
Topic 5	<ul style="list-style-type: none"> <li>• <b>Installation and Configuration:</b> This section of the exam measures the skills of Server Engineers and covers the process of installing Tableau Server, understanding installation paths, identity store options, SSO integrations, SSL setup, and silent installs. Candidates also need to demonstrate the ability to configure Tableau Server by setting cache, distributing processes, customizing sites, and configuring user quotas. It further includes adding users, managing their roles and permissions, and applying Tableau's security model at different levels from sites to workbooks.</li> </ul>

## Salesforce Certified Tableau Server Administrator Sample Questions (Q49-Q54):

### NEW QUESTION # 49

When you use trusted tickets in Tableau Server, users can:

- A. Embed database credentials
- B. Encrypt database connections
- C. Save and edit workbooks
- **D. Access embedded views without being prompted for credentials**

**Answer: D**

Explanation:

Trusted Tickets is an authentication method in Tableau Server for embedding views in external applications (e.g., portals) without requiring users to log in manually. Here's how it works:

\* A trusted application (e.g., a web server) authenticates with Tableau Server using a trusted IP or username/password.

\* Tableau Server issues a temporary ticket (a unique string).

\* The ticket is embedded in a view URL (e.g., /trusted/<ticket>/views/...), granting access to the view for a short period (configurable, default 5 minutes).

\* Option A (Access embedded views without being prompted for credentials): Correct. Trusted tickets enable SSO-like behavior for embedded content, bypassing the login prompt if the ticket is valid. This is ideal for seamless integration into external systems.

\* Option B (Encrypt database connections): Incorrect. Encryption is handled by data source configurations (e.g., SSL), not trusted tickets, which focus on user authentication.

\* Option C (Save and edit workbooks): Incorrect. Trusted tickets grant view access, not edit permissions—those depend on the user's site role and permissions.

\* Option D (Embed database credentials): Incorrect. Trusted tickets authenticate users to Tableau Server, not databases—database credentials are managed separately in the data source.

Why This Matters: Trusted tickets simplify embedding Tableau content securely in custom applications, enhancing user experience.

Reference: Tableau Server Documentation - "Trusted Authentication" (<https://help.tableau.com/current/server>)

/en-us/trusted\_auth.htm).

### NEW QUESTION # 50

What type of information is stored in the tsm maintenance backup -f <filename>.tsbak command?

- A. Topology data
- **B. Repository data**
- C. Notification settings
- D. SMTP server settings

**Answer: B**

Explanation:

The tsm maintenance backup command creates a backup file (with a .tsbak extension) that captures critical data needed to restore Tableau Server in case of failure or migration. This backup primarily includes:

Repository data: This encompasses the PostgreSQL database, which stores metadata such as workbooks, data sources, user information, permissions, schedules, and subscriptions.

Configuration data: This includes server settings like authentication methods, port configurations, and service layouts, but it does not include topology data as a separate entity (topology is part of the configuration).

The command does not back up the following:

Extract files (stored in the File Store), which must be backed up separately if needed.

Log files, which are archived using tsm maintenance ziplogs.

Option A (Notification settings) is incorrect because while notification settings are part of the configuration data stored in the repository, they are not the primary focus of the backup. The broader category is "repository data." Option B (SMTP server settings) is also incorrect for the same reason-SMTP settings are configuration data within the repository, but the backup is not limited to just these settings.

Option D (Topology data) is incorrect because topology data (e.g., how services are distributed across nodes) is part of the configuration included in the backup, but it's not stored as a standalone item. The .tsbak file is centered on the repository database.

Reference: Tableau Server Documentation - "Back Up Tableau Server Data" ([https://help.tableau.com/current/server/en-us/backup\\_restore.htm](https://help.tableau.com/current/server/en-us/backup_restore.htm)).

### NEW QUESTION # 51

Your deployment of Tableau Server uses Active Directory authentication. What statement correctly describes the process of importing a group from Active Directory?

- A. Importing a group from Active Directory requires a .csv file that lists user IDs
- **B. New users created as a result of importing a group are assigned the site role specified during the import**
- C. If an imported group contains any users that have Tableau Server accounts, their site role will be changed to match the site role specified during the import
- D. You can change the name of a group during import, although this will not change the group's name in Active Directory

**Answer: B**

Explanation:

Importing an AD group into Tableau Server syncs user management-let's analyze the process and options:

\* AD Group Import Process:

\* How: In the UI (Users > Groups > Add Group > Active Directory), enter the AD group name, set a site role, and sync.

\* Behavior:

\* Existing Users: If a user is already in Tableau Server, their site role remains unchanged unless manually adjusted-sync applies the minimum role only if it upgrades access.

\* New Users: Added to Tableau with the site role specified during import.

\* Config: Requires AD authentication enabled in TSM.

\* Option D (New users created are assigned the site role specified during import): Correct.

\* Details: When importing (e.g., "SalesTeam" group, site role: Explorer):

\* New users get Explorer.

\* Existing users keep their role unless it's below Explorer (e.g., Unlicensed # Explorer).

\* Why: Ensures consistent onboarding-new users align with the group's intended access.

\* Option A (Existing users' roles change to match import): Incorrect.

\* Why: Existing roles persist unless lower than the minimum-e.g., Viewer stays Viewer if import sets Explorer, but Unlicensed

upgrades. Not a full overwrite.

\* Option B (Requires a .csv file): Incorrect.

\* Why: AD import uses live sync via LDAP-no .csv needed (that's for local auth imports).

\* Option C (Change group name during import): Incorrect.

\* Why: The AD group name is fixed-you can't rename it in Tableau during sync (it mirrors AD).

Post-import renaming is possible but not part of the process.

Why This Matters: Accurate AD sync ensures seamless user management-missteps can disrupt access or licensing.

Reference: Tableau Server Documentation - "Synchronize Active Directory Groups" ([https://help.tableau.com/current/server/en-us/groups\\_sync.htm](https://help.tableau.com/current/server/en-us/groups_sync.htm)).

## NEW QUESTION # 52

Which two options can be configured by a server administrator per site? (Choose two.)

- A. Language and locale
- B. Limitation on number of users
- C. Limitation on storage space
- D. Ability to embed credentials

**Answer: A,C**

Explanation:

Tableau Server supports multi-tenancy via sites, each with customizable settings managed by server or site administrators. Let's analyze what's configurable per site:

\* Site Settings: Found in the web UI under Site > Settings > General. Server admins can override site admin settings.

\* Option B (Limitation on storage space): Correct.

\* Details: Server admins can set a storage quota per site (e.g., 100 GB) to cap disk usage for extracts and workbooks.

\* How: In TSM or site settings (if enabled)-e.g., tsm configuration set -k site.storage.quota -v 100000.

\* Impact: Prevents one site from monopolizing resources in multi-site deployments.

\* Option D (Language and locale): Correct.

\* Details: Each site can set its language (e.g., English, French) and locale (e.g., date/number formats).

\* How: Site settings UI-e.g., "Language: French, Locale: France."

\* Impact: Tailors the user experience per site's audience.

\* Option A (Ability to embed credentials): Incorrect.

\* Details: Embedding credentials (e.g., in data sources) is a server-wide setting (tsm data-access), not per-site. Site admins can't override it.

\* Option C (Limitation on number of users): Incorrect.

\* Details: User limits are tied to licenses (server-wide), not configurable per site. Site admins manage user assignments, not quotas.

Why This Matters: Site-specific settings enable tailored governance and resource allocation in multi-tenant environments.

Reference: Tableau Server Documentation - "Site Settings" ([https://help.tableau.com/current/server/en-us/site\\_settings.htm](https://help.tableau.com/current/server/en-us/site_settings.htm)).

## NEW QUESTION # 53

Which three items can be contained in a project? (Choose three.)

- A. Workbooks
- B. Groups
- C. Data Sources
- D. Nested Projects

**Answer: A,C,D**

Explanation:

In Tableau Server, projects are containers for organizing and securing content. They help manage permissions and structure content hierarchically. Let's define what can be contained:

\* Workbooks: Visualizations and dashboards published to the Server.

\* Data Sources: Published connections or extracts reusable across workbooks.

\* Nested Projects: Sub-projects within a parent project, introduced in later versions (e.g., 2018.2) for deeper organization.

\* Option B (Workbooks): Correct. Workbooks are the primary content type in projects, containing views and dashboards.

\* Option C (Nested Projects): Correct. Nested projects allow hierarchical structuring (e.g., a "Sales" project with "Q1" and "Q2" sub-projects), with inherited or custom permissions.

\* Option D (Data Sources): Correct. Published data sources reside in projects, providing reusable data connections.

\* Option A (Groups): Incorrect. Groups are collections of users managed at the site or server level, not stored within projects. Projects contain content, not user entities.

Why This Matters: Projects are key to content governance-knowing what they hold helps administrators organize and secure assets effectively.

Reference: Tableau Server Documentation - "Projects" (<https://help.tableau.com/current/server/en-us/projects.htm>).

## NEW QUESTION # 54

.....

Finding original and latest Salesforce Analytics-Admn-201 exam questions however, is a difficult process. Candidates require assistance finding the Salesforce Analytics-Admn-201 updated questions. It will be hard for applicants to pass the Analytics-Admn-201 Exam Questions exam on their first try if Salesforce Certified Tableau Server Administrator questions they have are not real and updated. Preparing with outdated Analytics-Admn-201 Exam Questions results in failure and loss of time and money. You can get success in the Analytics-Admn-201 exam on first attempt and save your resources with the help of updated exam questions.
