2025 Latest BraindumpsIT SCP-NPM PDF Dumps and SCP-NPM Exam Engine Free Share: <https://drive.google.com/open?id=1otD6SUaSzfl44qkHrjnp1SiETUNAb0fu>

You may bear the great stress in preparing for the SCP-NPM exam test and do not know how to relieve it. Dear, please do not worry. BraindumpsIT SCP-NPM reliable study torrent will ease all your worries and give you way out. From BraindumpsIT, you can get the latest SolarWinds SCP-NPM exam practice cram. You know, we arrange our experts to check the latest and newest information about SCP-NPM Actual Test every day, so as to ensure the SCP-NPM test torrent you get is the latest and valid. I think you will clear all your problems in the SCP-NPM actual test.

Our SCP-NPM training materials provide 3 versions to the client and they include the PDF version, PC version, APP online version. Each version's using method and functions are different but the questions and answers of our SCP-NPM study quiz is the same. The client can decide which SCP-NPM version to choose according their hobbies and their practical conditions. You will be surprised by the convenient functions of our SCP-NPM exam dumps.

SolarWinds SCP-NPM Valid Test Practice - Reliable SCP-NPM Exam Price

No matter which country or region you are in, our SCP-NPM exam questions can provide you with thoughtful services to help you

pass exam successfully for our SCP-NPM study materials are global and warmly praised by the loyal customers all over the world. They have many advantages, and if you want to know or try them before your payment, you can find the free demos of our SCP-NPM learning guide on our website, you can free download them to check the excellent quality.

SolarWinds SCP-NPM certification exam is an essential credential for IT professionals who work with network monitoring tools and are responsible for ensuring optimal network performance. SolarWinds Network Performance Monitor (NPM) Exam certification validates the knowledge and skills of IT professionals in network performance monitoring and demonstrates their proficiency in using SolarWinds NPM. The SCP-NPM Certification provides a competitive edge in the job market and helps IT professionals advance their careers.

SolarWinds Network Performance Monitor (NPM) Exam Sample Questions (Q68-Q73):

NEW QUESTION # 68

What is the most time-efficient way to create a report in NPM that shows the top 50 interfaces by percent utilization?

- A. Run the default top 25 interfaces by percent utilization report for different timeframes
- B. Create a new advanced SQL query report
- C. Create an interface report and use a filter to restrict to the top 50
- **D. Edit the default top 25 interfaces by percent utilization report and update to the top 50**

Answer: D

Explanation:

NPM provides a default report called Top 25 Interfaces by Percent Utilization that shows the interfaces with the highest average utilization over the selected time period¹. This report can be easily edited to change the number of interfaces displayed, the time period, the sorting order, the layout, and the filters². To create a report that shows the top 50 interfaces by percent utilization, you can simply edit this report and change the Limit option from 25 to 503. This is the most time-efficient way to create the report, as it does not require creating a new report from scratch, writing a SQL query, or running the report multiple times for different timeframes. References: 1: Network Performance Monitor Administrator Guide - Top 25 Interfaces by Percent Utilization 2: Network Performance Monitor Administrator Guide - Edit a report 3: Network Performance Monitor Getting Started Guide - Customize a report

NEW QUESTION # 69

NPM polls static properties, and calculates bandwidth consumption based on the total amount of _____ coming through the firewall.

- A. Nibbles
- B. Megabytes
- C. Kilobytes
- **D. Bytes**

Answer: D

Explanation:

NPM polls static properties, such as interface speed and duplex mode, from the firewall devices using SNMP.

NPM also collects traffic statistics, such as bytes in and bytes out, from the firewall interfaces using SNMP or NetFlow. NPM then calculates bandwidth consumption based on the total amount of bytes coming through the firewall over a given time interval.

Bandwidth consumption is expressed as a percentage of the interface speed. For example, if a firewall interface has a speed of 100 Mbps and NPM polls 10 MB of bytes in and 10 MB of bytes out in one minute, the bandwidth consumption is 20% [(10 MB + 10 MB) / 100 Mbps * 100%]¹. References: Monitor firewalls with NPM, Calculate bandwidth utilization on an interface

NEW QUESTION # 70

You have two groups of users - one in Sydney and one in Perth. How do you limit the users within the Orion Platform so they only have access to the devices in their location?

- A. Use the Orion Service Manager to limit user access to nodes only in their location
- B. Configure Network Atlas to show only devices in their geographical location
- C. Configure the Orion Web Console settings to show only devices in the user's geographical location

- **D. Group devices into geographical Orion groups and use single group Account limitations to limit user access**

Answer: D

Explanation:

According to the SolarWinds NPM Administrator Guide, you can use Orion groups to organize your network objects based on any criteria, such as location, device type, department, etc. You can then apply account limitations based on Orion groups to restrict user access to only the network objects that belong to a specific group. For example, you can create two Orion groups, one for Sydney and one for Perth, and assign the devices in each location to the corresponding group. Then, you can use the single group Account limitation to limit the users in Sydney to only view the Sydney group, and the users in Perth to only view the Perth group. Reference: SolarWinds NPM Administrator Guide, page 163-165; Limit users to specific network areas in the SolarWinds Platform

NEW QUESTION # 71

How can you extend NPM's monitoring to non-standard devices?

- A. Polling with non-standard protocols
- **B. Using OIDs organized in MIBs**
- C. Combining licenses from different products
- D. Deploying Orion agents

Answer: B

Explanation:

NPM can monitor a wide range of network devices and infrastructure, including routers, switches, firewalls, servers, and virtual machines. However, some devices may not support standard protocols such as SNMP or WMI, or may have specific metrics that are not monitored out-of-the box by NPM. In such cases, you can extend NPM's monitoring to non-standard devices by using object identifiers (OIDs) organized in management information bases (MIBs). OIDs are numeric strings that uniquely identify a variable in a MIB.

MIBs are hierarchical databases that define the properties and values of the variables that can be monitored on a device. By importing device-specific MIBs into the SolarWinds MIB Database, and creating custom pollers based on OIDs from the MIBs, you can monitor any metric that is available on the device. You can also display the polled data in the web console using dedicated or existing resources¹². References:

NEW QUESTION # 72

Your network includes the headquarters and three remote sites. Users from remote site A complain they do not have access to the company's accounting server. Users from remote site B and C have access to the accounting server. How can you find the source of the issue?

- A. Verify that the accounting servers are up
- **B. Use NetPath to see if there are problem areas between remote site A and the headquarters**
- C. Verify that the accounting servers' CPU utilization are not abnormally high
- D. Use NetPath to see if there are problem areas between remote site A and remote sites B and C

Answer: B

Explanation:

NetPath is a feature of SolarWinds NPM that helps you identify network problems faster by automatically creating a map of the problem area, with a wide variety of supporting information. NetPath displays the performance details of devices inside and outside of your network. You can use NetPath to see the node-by-node network path from a probe at remote site A to the accounting server at the headquarters, and isolate the node or connection that is decreasing end-to-end performance. If the issue is external, NetPath identifies the name of the company that owns the node and displays their contact information. If the issue is internal, NetPath incorporates data from NPM, NCM, and NTA about your on-premises gear. The other options are not as effective as NetPath in finding the source of the issue, as they do not provide the same level of visibility and analysis of the network path.
