"It's never too old to learn!", preparing for a PL-600 certification is becoming a common occurrence. Especially in the workplace of today, a variety of training materials and tools always makes you confused and waste time to test its quality. In fact, you can totally believe in our PL-600 Test Questions for us 100% guarantee you pass PL-600 exam. If you unfortunately fail in the exam after using our PL-600 test questions, you will also get a full refund from our company by virtue of the proof certificate.

The PL-600 Exam measures the candidate's ability to design and implement solutions that meet business requirements and ensure scalability, reliability, and security. It also evaluates their knowledge of the Power Platform architecture, integration with other Microsoft and third-party applications, and the use of advanced features and functionalities.

Microsoft PL-600 exam is an essential certification exam for those who want to become a certified Power Platform Solution Architect. Microsoft Power Platform Solution Architect certification exam tests the candidate's knowledge of designing and implementing complex business solutions using Microsoft Power Platform. PL-600 Exam is designed to test the candidate's knowledge of various areas, including Power Apps, Power Automate, Power BI, and Power Virtual Agents. Microsoft Power Platform Solution Architect certification is ideal for those who want to enhance their career opportunities and increase their earning potential.

## Authoritative 100% Free PL-600 – 100% Free Valid Exam Materials | PL-600 Exam Dumps Collection

To stand in the race and get hold of what you deserve in your career, you must check with all the Microsoft PL-600 Exam Questions that can help you study for the Microsoft PL-600 certification exam and clear it with a brilliant score. You can easily get these Microsoft PL-600 Exam Dumps from Microsoft that are helping candidates achieve their goals.

### Microsoft Power Platform Solution Architect Sample Questions (Q199-Q204):

#### NEW QUESTION # 199

Hotspot Question

You are a Microsoft Power Platform solution architect working on a project. API calls are being sent between external applications and a Microsoft Power Platform solution.

The number of requests per user within a given time frame varies. Some users may be exceeding the service protection API limits. You need to ensure that the API conforms to service protection limits.

Which three metrics should you review? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

- A. The total execution time for requests by all users.
- B. The number of requests that a user can make each day.
- C. The total number of requests that can be processed each day.
- D. The number of concurrent requests that a user can make.
- E. The combined execution time required to process requests from a user.

Answer: B,D,E

Explanation:

Three types of service protection API limit errors that can be returned:

1. Number of requests

This limit counts the total number of requests during the preceding 300 second period.

2. Execution time

This limit tracks the combined execution time of incoming requests during the preceding 300 second period.

3. Concurrent requests

This limit tracks the number of concurrent requests.

#### NEW QUESTION # 200

You are conducting performance testing for a Microsoft Power Platform solution. The solution uses Power Automate cloud flows to query and synchronize data across 10 different tables based on various criteria. You make the following observations:

- \* Internet speed during testing is fast (500 Mbps).
- \* There are 50 Dynamics real-time workflows in use.
- \* There are 63 Dynamics asynchronous workflows in use.
- \* There are 76 Power Automate cloud flows in use.

You identify the following performance issues;

You need to recommend steps to resolve the performance issues.

What should you recommend? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation:

Box 1: Reduce usage of near real-time workflows

A real-time workflow can be converted to asynchronous workflow and back to real-time.

Box 2: Convert all Dynamics 365 workflows to Power Automate cloud flows.

Workflows are limited to Microsoft Dynamics 365/CRM application only.

Power Automate can span across multiple web-based services or applications at the same time.

Dynamics 365 CRM Workflows can be converted to Power Automate flows.

### NEW QUESTION # 201

You are designing a model-driven app for a hospital. The app will be used to track teams at the hospital including:

You need to recommend the team types to use.

Which team types should you recommend? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

**Answer:**

Explanation:

<https://docs.microsoft.com/en-us/power-platform/admin/manage-teams>

### NEW QUESTION # 202

A company uses a third-party cloud-based app to make real-time business decisions. The app has a RESTful API.

You must design a Microsoft Power Platform solution that interacts with the third-party app. Changes made in the Microsoft Power Platform solution must be reflected in the cloud app.

You need to recommend technologies to integrate the Microsoft Power Platform solution with the cloud app.

Which two technologies should you recommend? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

- A. Custom plug-on registered with Microsoft Dataverse
- B. Power Virtual Agents
- C. Scheduled Power Automate cloud flow with a custom connector to the cloud app
- D. Model-driven app

**Answer: A,D**

Explanation:

A: To enable Logic Apps, Power Automate, or Power Apps to communicate with the REST or SOAP API, use a custom connector, which is a wrapper around a REST API (Logic Apps also supports SOAP APIs).

C: Custom APIs are a powerful way to connect to any existing API, hosted anywhere, from PowerApps. You do not need a PowerApps Enterprise subscription to register or use a Custom API.

Custom APIs are RESTful endpoints that you can connect to and use from PowerApps. All you'll need is a Swagger definition file for your endpoint.

### NEW QUESTION # 203

A company plans to create a Power Platform solution that integrates with Dynamics 365 Sales.

The solution must meet the following requirements:

Connect directly with a Microsoft Azure SQL database as an external data source at run time where specific data is available in the Dynamics 365 Sales solution without the need for data replication.

An external system needs to send data to the company's Dynamics 365 Sales solution.

You need to recommend the most suitable solution to integrate Dynamics 365 Sales with both systems.

What should you recommend? To answer, select the appropriate option in the answer area.

NOTE: Each correct selection is worth one point.
