## New Slack-Dev-201 Exam Prep, Latest Slack-Dev-201 Learning Materials

While making revisions and modifications to the Salesforce Slack-Dev-201 practice exam, our team takes reports from over 90,000 professionals worldwide to make the Salesforce Certified Slack Developer exam questions foolproof. To make you capable of preparing for the Salesforce Slack-Dev-201 Exam smoothly, we provide actual Salesforce Slack-Dev-201 exam dumps.

## Salesforce Certified Slack Developer Sample Questions (Q91-Q96):

### NEW QUESTION # 91

Your team is designing a Slack app for managing lunch orders in the office. The app needs to allow employees to select their meal options from a daily menu.

What is the best way to design this feature?

- A. Use a bot to send a daily message and collect orders through direct messages
- B. Develop a slash command that employees use to enter their meal choices
- C. Implement a drop-down menu in a message for employees to select their meal options
- D. Post the menu in a channel and have employees react with emojis to place their orders

Answer: C

Explanation:

Implement a drop-down menu in a message for employees to select their meal options A drop-down menu in a message is an efficient and organized way for employees to select their meal options from a daily menu. It offers a structured and streamlined method for making selections, reducing clutter and confusion.

Why not the other options:

\*Slash commands might require employees to remember specific commands and format their responses, which can be less user-friendly.

\*Collecting orders through direct messages can be cumbersome and lacks the visibility of a group-based order system.

\*Using emojis for orders can be confusing and does not provide the structured approach that a drop- down menu does.

### NEW QUESTION # 92

If your Slack app needs to retrieve the list of all reactions added to a specific message, which Slack Web API method should be used?

- A. reactions.list
- B. chat.history
- C. reactions.get
- D. messages.reactions

**Answer: C**

Explanation:

Reactions.get reactions.get is the correct Web API method for retrieving all reactions added to a specific message. This method allows developers to obtain detailed information about reactions on a message.

Why not the other options:

\*Reactions.list retrieves reactions made by a user, not reactions on a specific message.

\*Chat.history retrieves the history of messages in a channel, but does not provide details about reactions on individual messages.

\*Messages.reactions is not a valid method in Slack's Web API.

### NEW QUESTION # 93

When developing a feature for your Slack app that integrates with a third-party service, under what circumstance is it advisable to use sample code and external resources?

- A. When implementing a well-documented API integration for which reliable and secure sample code is available
- B. When the integration involves proprietary algorithms specific to your company's intellectual property
- C. When creating a unique encryption method for securing your app's data
- D. For developing core functionalities that differentiate your app from competitors in the market

**Answer: A**

Explanation:

When implementing a well-documented API integration for which reliable and secure sample code is available Using sample code and external resources is advisable when implementing a well-documented API integration, particularly if there is reliable and secure sample code available. This approach can streamline the development process and ensure the integration follows established best practices.

Why not the other options:

\*Proprietary algorithms and intellectual property should generally be developed in-house to maintain confidentiality and control.

\*Core functionalities that set your app apart in the market may require bespoke development to meet specific innovation and differentiation goals.

\*Creating encryption methods is a sensitive task that typically requires custom development to ensure maximum security and effectiveness.

### NEW QUESTION # 94

Your team is developing a Slack app to notify a sales team whenever a new lead is captured on the company website. Which Slack component or feature should primarily be used to implement this functionality?

- A. Use Slash commands to allow sales team members to request lead updates

- B. Implement incoming webhooks to automatically send notifications to a sales channel when a new lead is captured
- C. Develop a bot to periodically check for new leads and post updates in a dedicate channel
- D. Set up an RSS feed in a Slack channel for new lead notifications

**Answer: B**

Explanation:

Implement incoming webhooks to automatically send notifications to a sales channel when a new lead is captured Incoming webhooks are ideal for pushing notifications from external systems (like a website lead capture system) into Slack. They provide a simple and effective way to send real-time updates to a designated channel whenever a new lead is captured.

Why not the other options:

\*Slash commands are user-initiated and would not provide automatic notifications.

\*A bot that periodically checks for new leads may not provide updates in real-time..

\*RSS feeds are not the best method for integrating with dynamic, event-driven updates like new lead captures.

#### NEW QUESTION # 95

You've developed a Slack app that provides productivity-enhancing features, and you want to share it with multiple workspaces. What is a key consideration when sharing your app with other workspaces?

- A. Each workspace will have access to the same set of data and configurations
- B. Sharing an app across workspaces requires a one-time purchase for each workspace
- C. You should ensure that your app complies with the privacy and security policies of each workspace
- D. You can share your app with any workspace without needing approval from Slack

**Answer: C**

Explanation:

You should ensure that your app complies with the privacy and security policies of each workspace When sharing your app with multiple workspaces, it's crucial to ensure that your app complies with the privacy and security policies of each individual workspace. Different workspaces may have varying data access and security requirements, so your app should be adaptable to meet these diverse needs.

Why not the other options:

\*Sharing an app with other workspaces often involves approval and integration with each workspace's administrators.

\*Each workspace may have its own data and configuration requirements, and a one-size-fits-all approach is not suitable.

\*The pricing and licensing model for sharing an app across workspaces can vary and may not be a one-time purchase.

#### NEW QUESTION # 96

.....

Actual4Exams Slack-Dev-201 Desktop Practice Exam Software: In the Desktop Slack-Dev-201 practice exam software version of Slack-Dev-201 practice test is updated and real.
